Building Construction 3—B11. Instruction in individual and group project in various types of building construction and engineering work.

Building Construction 4—A11—Tests of sand, cement, brick. Color work, both in aggregates or as a color filler. Test and use of plaster for interiors and exteriors. Test of roof tile (clay and cement) for color and water tightness. Specifications and use in fire resistant roof.

Building Construction 5—B-12. Visits to buildings in course of construction. City building ordinances. Checking plans of buildings in construction. Fireplace and chimney design. Brick and concrete arches.

Building Construction 6—A12. Description and demonstrations of construction in modern building. Brick and concrete in cottages.

In addition to the foregoing courses in strictly building matters, instruction is given in English, mathematics, general science, applied science, drawing, cabinet making, metal work, art, sociology, music, and physical training.

L. D. FRASIER HEADS GENERAL CONTRACTORS ASSOCIATION

Leroy D. Frasier was elected president of the General Contractors of San Francisco at the annual meeting of the organization held February 12. Other officers elected were: J. G. Leibert, 1st vice president; G. K. Jensen, 2nd vice president and W. J. Stevens, treasurer. S. Stockholm, W. B. Brinker and John Distel were elected to the Board of Directors, and D. B. Farquharson elected by acclamation to succeed himself as delegate to the Central Council. A. H. Wilhelm was chosen to succeed Chas. W. Gompertz as nominee for the Board of Directors of the Builders' Exchange.

Secretary E. T. Thurston tendered his resignation which was accepted. C. J. Dixon was named to fill this position.

PLUMBERS IN NEW HOME

The Master Plumbers' Association of Oakland, Berkeley and Alameda, is now occupying its new home at 538 Twenty-fourth street, Oakland. The building was recently purchased at a price of \$21,000. The main hall is 42 feet by 20 feet with a dining hall providing seating accommodations for seventy-five guests. A modern kitchen is also a feature of the building in addition to a garage for members and quarters for the Ladies' Auxiliary of the association.

PREPARED ROOFING SIMPLIFICATION IS APPROVED

Thirty-five manufacturers of prepared roofing, by joint action have agreed to eliminate shingle "seconds" according to John Lind, secretary of the Prepared Roofing Association. Seventy per cent of all the roofing sold in the United States, according to the report, is of the prepared roofing or composition type. This action on the part of the manufacturers is taken to indicate that home builders are to be assured of greater protection as to the quality of material offered.

UNIONS WARNED OF CLAUSE IN AGREEMENT

"All trades contemplating making a demand for an increased wage scale must comply strictly with the council regulation requiring a three months' written notice to that effect," was the warning recently sent out by president of the Building Trades Council of Newark, N. J. This announcement followed a report that the asbestos workers had signed an agreement for \$10.50 a day for journeymen and \$8 for helpers.

The International Brotherhood of Electrical Workers has organized an insurance company known as the Union Co-operative Insurance Association, Inc. Requests for insurance from members of the union indicate that the company will begin operations with \$1,400,000 worth of business on its books.

Report of Committee of Nine on California State Highway System

To Friend W. Richardson, Governor:

Your committee, appointed in accordance with Chapter 241, Statutes 1923, to make a study of the State highway situation for the purpose of rendering a report for the benefit of the Forty-sixth session of the Legislature, with sole instructions from you to perform our duty according to law, herewith presents a summary of its recommendations.

A complete and detailed report setting forth our findings and supporting our conclusions and recommendations, as set forth below, is in course of preparation and will shortly be submitted.

1. We recommend a classification of the roads in the present highway system into two general systems hereafter designated as primary and secondary system. Classification has been made in accordance with the importance of the various highways based on their functional use.

The primary system to consist of—

1. Inter-city highways.
2. Major interstate connections.
3. County seat laterals.
4. Other important lateral connections.

5. Major recreational highways. The secondary system to consist of—

1. Minor interstate connections.
2. Minor recreational highways.
3. Local development highways.

We find that it is necessary to add certain highways to the State highway system for the purpose of closing obvious gaps in the various routes, thus providing for the more economic and efficient operation of traffic on the primary road system.

To this end we recommend that the following roads be made State highways, which we classify as a portion of the primary system:

San Rafael to Point San Quentin, 3 miles.

Crescent City to the Oregon line, Coast Route, 19 miles.

Alturas to the Oregon line, near New Pine Creek, 33 miles.

From Colville to the Nevada State line in Mono County, 10 miles.

From Bakersfield to Mojave, 65 miles.

From Needles to Topope, 16 miles.

From Shavers Wells to Coachella, 25 miles.

From Blythe to the Colorado River, 5 miles.

From Oxnard to the main coast highway, 2 miles.

From San Diego to Tia Juana, 3 miles.

We recommend that the primary system consist of the roads outlined in red and that the secondary system consist of the roads outlined in green upon the maps hereto attached and made a part hereof.

We recommend that no other additions be made to the primary system, and that any additional roads which, in the opinion of the Legislature, should be included in the State highway system prior to the completion of the primary be classified into the secondary system.

The committee has been requested to recommend for inclusion in the State highway system 3000 miles of additional road, the estimated future expenditure on which would approximate \$117,000,000.

This is divided 2950 miles in the 45 northern counties at an estimated cost for construction and reconstruction in a fifteen or twenty-year period of about \$86,000,000, and 951 miles in the 13 southern counties at an estimated

Herewith is published a complete report of the Committee of Nine submitted to Governor Friend W. Richardson. The Committee was appointed two years ago through an act of the State Legislature for the purpose of making a complete survey of the California Highway situation with a view of considering the highway requirements of all sections of the State and to propose some adequate plan for financing the complete system.

cost in a fifteen or twenty-year period of \$31,000,000.

Of these requests, we recommend ten sections, hereinbefore named, aggregating 196 miles, to be included in the primary system for reasons stated above.

The committee is unwilling to recommend any further additions, although not disputing the merit of some of the roads requested, because of the magnitude of our obligation on the present highway system.

2. Financing. We recommend further financing of State highway construction by one or more methods, which will insure a revenue of approximately \$10,000,000 in 1926 and thereafter.

Four general methods of financing are available.

1. By general State bond issue. The sum of \$200,000,000 will probably be required to be expended over a term of at least fifteen years. If this method is adopted, we recommend successive bond issues for portions of this amount.

2. Ad valorem tax may be levied on the general property of the State at rates necessary to produce a minimum of \$10,000,000 per year.

3. Direct legislative appropriation might be made at the rate of not less than \$20,000,000 per biennium.

4. Increased taxes on motor vehicles through either—

- (a) Increased gasoline tax.
- (b) Increased plate tax.
- (c) Graduated weight tax.

to produce additional revenue of \$10,000,000 in 1926.

Of the above four methods, we recommend increased taxes on motor vehicles in combination with the following recommended bond issue.

We recommend that steps be taken by the Legislature preliminary to placing before the voters at the next general election a bond issue of \$25,000,000, all proceeds of which shall be used to defray the cost of construction of major bridges on the primary road system, and in co-operation with railroads, division of expense to be fixed by the California Railroad Commission for each project, for the elimination of railroad grade crossings on the primary road system.

We recommend that at least 75 per cent of construction funds be devoted annually to the construction of the primary road system until completed.

3. We have found the following situation:

The southern thirteen counties, San Luis Obispo, Tulare, Kern, Mono, Inyo, San Bernardino, Santa Barbara, Ventura, Los Angeles, Orange, Riverside, San Diego, and Imperial, comprise about 50 per cent of the area of the State. They have an estimated popu-

lation of about 45 per cent of the total population of the State. (U. S. Bureau of Census estimate for 1923.) These counties contain only 35 per cent of the existing State highway mileage, and record of past expenditures shows approximately 34 per cent of State highway construction expenditures in these counties. In these counties is found 67 per cent of the motor vehicle registration. We further find that not less than 60 per cent of the future expenditures for State highway construction on the primary road system will be required on roads located in the northern forty-five counties.

This situation has given the committee much concern, but we have been unable to agree on any method for apportionment of future expenditures, which would correct this situation. We consider it advisable, however, to concentrate future State highway construction expenditures, in so far as possible, on the primary trunk system, which is a general State importance, and we recommend that construction be prosecuted by the State Highway Commission on the primary system at equal rates of annually completed highway mileage in each section of the State.

An alternate method for allocation of funds would be to district the State for State highway expenditures, allotting to each district the amount raised therein.

We recommend the policy of the California Highway Commission should be to assume all cost of construction on the road system, including bridge construction and rights of way, accepting such donations as may be offered.

We recommend that the convict labor camps be expanded or increased in number, to utilize at least 1000 prisoners on highways, the cost to be payable from any monies in the highway construction funds, and that the savings in prison maintenance expense be paid from general State funds to the highway fund from which operation of convict camps is defrayed.

We recommend that maintenance be extended by law to all unconstructed State highways open to travel, this for the reason that many years will elapse prior to construction of all State highways, and the best possible road service should in the interim be furnished to the public.

We are informed by the State Highway Commission that the additional annual cost to extend this class of work to these roads not now maintained is estimated from \$600,000 to \$700,000 per annum.

We recommend that the amount of the existing revenue for maintenance and reconstruction purposes be not reduced on account of the requirements for maintenance and the urgency of reconstruction needs due to traffic conditions.

We recommend that the present law be so amended as to give the California Highway Commission authority to relocate and realign constructed roads.

We recommend that as a procedure for adding roads to the system, any district or county asking for the inclusion of additional roads to the highway system should make survey, plans and estimates of the cost of same in proper form and submit to the California Highway Commission, which, in turn, should submit the same to the first succeeding session of the Legis-

lature with its recommendations as to importance and classification.

Reasons which lead us to make these recommendations will be set forth in detail in our final report now in course of preparation, which will be filed shortly.

A. H. Breed. Geo. G. Radcliff.
Elmer P. Bromley. Arthur E. Loder.
Louis Everding. J. B. Gill.
R. M. Morton. J. H. Newman
W. F. MIXON, Secretary.

FIREPROOF HOME COMPETITION IS ANNOUNCED

Architects, draftsmen and architectural students throughout the country are invited to participate in a competition in designing fire-proof small homes with exterior walls of structolite gypsum concrete, which is being conducted by The Architectural Forum of New York City and the United States Gypsum Company of Chicago. The contest is approved by the American Institute of Architects, and will close April 15.

Prizes of \$500, \$300, \$200 and \$100 will be awarded by a jury of leading architects to the winning designs in each of two classes, and ten honorable mentions in each class will receive \$50 apiece. Class A is for five-room bungalows and Class B, for six-room two-story houses.

Service to the family that wants an attractive, fire-safe, structurally sound home—economically—is the object of this competition. The Architectural Forum's announcement states that "the hypothetical tenant of either of these houses will be an average small American family of moderate means and without servants." In both cases the exterior walls must be of structolite concrete faced with stucco, brick, stone, shingles or siding. The total cost must not exceed 50 cents a cubic foot.

Purposes of the competition are stated as follows:

"1. To encourage further a higher standard of design and plan of the average American home which, because of its moderate cost, is often built without the benefit of competent individual architectural service.

"2. To introduce widely a new form of fire-resisting, permanent and economical construction through the use of structolite concrete construction. This is an improved method of fire-resistive construction for walls, floors, partitions and roofs, adaptable for all classes of buildings. Structolite concrete is a mixture of structolite, a form of gypsum possessing great structural strength, with various recommended aggregates to form a rapidly setting mix for pouring monolithic construction. The resultant construction gives a fireproof home of high insulating value, thoroughly soundproof, at a cost within the purchasing power of almost any builder.

Further information concerning the competition may be obtained from The Architectural Forum, 383 Madison Ave., New York City, or the United States Gypsum Company, 205 West Monroe street, Chicago.

CERTIFICATES GRANTED

California State Board of Architecture has granted certificates to practice architecture in this state to: Chas. C. Frye, 416 E. W. Hellman Bldg., Los Angeles; David Olson, 1500 Telegraph Ave., Oakland; Russell Guerne de Lappe 2715 9th Ave., Oakland; Walter E. Baumberger, 1332 Geary St., San Francisco, and Paul L. Dragon, 369 Pine St., San Francisco.

Here, There and Everywhere

Special Correspondence

It is perhaps a little too early in the season to present an accurate picture of the wage demands for 1925, but a brief review of conditions in a few key cities may be out of place at this time. All of the agreements in New York run until December 31, 1925. However, a strike of wire lathers foremen for \$75 a week of forty-four, a raise of \$12.50 over their present wages is being asked by some of the employers as an opening wedge. Iron workers, carpenters and laborers in Chicago are asking for increases in accordance with a clause in the general agreement which stipulates that demands must be presented prior to February 1st. In Cleveland the plasterers and lathers are demanding \$1.75 an hour and the forty hour week. The painters have made a demand for \$1.50 and the five day week. A thirteen months' agreement has been negotiated in Cincinnati, effective February 23, at the 1924 rate. A new agreement with the plumbers in Pittsburgh was signed recently at \$1.43% to run until June 1, 1927. Several other trades in that city have made known their demands, among them being the iron workers, present rate \$1.25, demanding \$1.50; hod carriers, present rate \$1.00, demanding \$1.25; laborers, present rate 79 cents, demanding \$1.00. In Kansas City the hoisting engineers are asking an increase of twenty-five cents an hour over their present rate of \$1.12% and the lathers are asking the same amount over their present rate of \$1.25. Bricklayers in Nashville, Tenn., were granted an increase of \$1 a day over their old rate of \$11 on January 1st.

According to the Monthly Labor Review, issued by the United States Department of Labor, the bricklayers' production in this country is higher than at any time since the introduction of ornamental bonds and joints demanded in modern brickwork.

Ethelbert Stewart, Commissioner of the Bureau of Labor Statistics, Washington, directed recently an investigation of labor productivity and costs in certain building trades in fifteen typical cities. He found Birmingham bricklayers at the top in production and those in Indianapolis at the bottom. The average number of brick laid a man an eight hour day in the fifteen cities is 1,364. In all except three cities, Boston, Philadelphia and Indianapolis, the production of the bricklayer is far about 1,000 a day. In Birmingham, the average bricklayer placed 1,928 bricks in the wall a working day.

If a bill now being drafted in California becomes a law it will be difficult for irresponsible contractors to do business in that state hereafter, according to a statement recently issued by a committee which is working on the proposal.

Approximately 50 per cent of the total amount of money spent for building in 1924 was for housing, according to the Copper and Brass Research Association. In 1923 about 40 per cent of the total was expended for this purpose.

In the opinion of W. S. Ferguson, president of the W. S. Ferguson Company, General Contractors of Cleveland, the building material market will likely maintain the 1924 price level throughout 1925.

A nation-wide survey of wages just completed by the U. S. Department of Labor shows that the prevailing rates of pay throughout the United States for 1924 are the highest in history. The average hourly rate is 128 per cent greater than 1913 and 164.2 per cent greater than 1907 and 8.3 per cent greater than 1923. In arriving at these figures the department compiled the union scale of wages of \$94,440 members of organized trades in 66 cities. The report shows that there has been a steady advance in hourly wage rates since 1907 and a steady decrease in working hours.

Proponents of Sovietism will do well to compare wage scales in Russia with those of the United States. The Soviet Government, which fixes the income, not only of tradesmen, but of men in the professions, has recently revised the scale so that now a skilled mechanic earns only about 20 per cent as much as is paid for the same class of work in this country. In determining the rates the government does not take into consideration living costs. The cost of living in Russia today is considerably higher than in the United States.

Latest returns from those interested and closely in touch with the construction situation in New York City, show that whereas a month ago skilled mechanics were plentiful in all crafts, an even balance has been struck through current conditions. The continuance of mild weather has been responsible to a great extent for the increased employment of men, particularly in the exterior trades, which nominally are slack at this season of the year. Winter construction is being pushed harder than ever before by the New York Building Congress, and as is the case throughout the nation, this Winter probably will be a real Winter of Builders.—Bulletin Building Trades Employers Association of Cleveland.

Rents paid by wage earners for houses of four or five unheated rooms and bath in the United States averaged 84 per cent higher in November, 1924 than in 1914, according to the National Industrial Conference Board. Commodity prices were 2.3 per cent greater on January 1, 1925 than on December 1, 1924. Average prices on January 1, 1925 were 6.6 per cent greater than on January 1, 1924. According to the Department of Agriculture the farmer's dollar was worth 89 cents in November, 1924, as compared with 90 cents in October, 1924, and \$1.00 in 1913.

General construction costs today are 4 per cent lower than one year ago and 23 per cent under the peak of June, 1920, according to a survey made by Engineering News Record. The costs are 110 per cent higher than the 1913 level.

Unions affiliated with the Fall River Textile Council of America Federation of Textile Operators voted recently to accept a 10 per cent wage reduction proposed by the Fall River Manufacturers Association.

Wage scales in the building trades in Syracuse are expected to remain the same for another year, according to James Horton, Secretary of the Syracuse Builders' Exchange. Under the present agreements bricklayers get \$1.25, plasterers \$1.37% and carpenters \$1.12%.

PUBLICATIONS

Conveyors Corporation of America, 326 West Madison street, Chicago, is distributing a new folder illustrating and describing American mono rail cable conveyors. The new equipment can be used in power plants, or in coal yards for handling coal from cars to bins, silos, bunkers, or piles. A number of unusual features has been embodied in the motive units. Two motor driven drums are used, each acting independently of the other. Manual brakes are superseded by magnetic brakes that insure instant, reliable braking.

The Crosby Clipper in a current issue has an interesting story of how 3/4-inch steel cables fastened with Crosby clips held 320-ton bridge caissons in alignment. The undertaking described is the reinforced concrete bridge that will span the Minnesota Valley between the Minnesota and Fort Snelling, just outside of St. Paul, Minnesota. The Crosby Clipper is published every other month by the American Hoist and Derrick Company, St. Paul.

"Pressure Type Water Filters" is the subject of bulletin 501 issued by Graver Corporation, East Chicago, Indiana. The bulletin describes filtration methods and shows the construction of the Graver filters, which are furnished with a perforated strainer plate instead of a pipe manifold and strainer heads for the collection of the filtered water. Complete tables of sizes and capacities are given.

Proceedings of the First National Conference on Street and Highway Safety are off the press. They include the address of the President of the United States before the conference, the opening address of Secretary of Commerce Hoover, the report of the conference, legislative principles, administrative and regulatory principles, suggestions for co-operative work, and a program of future activities.

The Southern Pine Association, New Orleans, Louisiana, has published a small booklet containing the names of subscribers to the Southern Pine Association. The information regarding subscribers includes the location of plants, capacity, railroads serving, species of output, items manufactured, equipment, and specialties.

Portland Cement Association, 111 West Washington St., Chicago, is distributing a bulletin entitled, "When Science Goes to Work for Modern Industry." It outlines the work of the Structural Materials Research Laboratory and describes some of the tests made each year.

The Arbitration Court of the New York Building Congress has published Bulletin Number 9 outlining the plan, the forms, the rules, the methods, and the procedure for handling arbitration cases thereunder. The last two pages of the bulletin are devoted to a code of ethics for the building industry.

Atlantic States Shippers' Advisory Board is distributing copies of the proceedings of the fifth regular and first annual meeting of the board, held at the Hotel Commodore, New York City, January 7 to 8.

Millions for Pacific Coast Harbor Projects in Bill Passed by Congress

(By LEWIS E. HAAS, Washington Representative, San Francisco Chamber of Commerce)

The Rivers and Harbors Authorization Bill just passed by the House authorizes projects on the Pacific Coast and in the Hawaiian Islands at a total cost of \$9,102,000.

The largest Coast item in the bill would authorize an expenditure of \$6,500,000 on the Los Angeles and Long Beach harbors. The Army Board for Rivers and Harbors estimates that the total cost of this project will amount to \$17,000,000, of which the Government will be required to furnish \$10,000,000 together with a nominal maintenance. The \$7,000,000 balance is to be subscribed by the communities affected.

The next largest item in the bill is an expenditure of \$2,100,000 at Hilo Harbor, Hawaii; \$187,500 would be expended at the Seattle Harbor; \$149,000 at San Diego Harbor; \$74,000 in improving the Siuslaw River, Oregon; \$50,000 at Port Orchard Bay, Washington; \$10,200 at Deep River, Washington; \$7200 at Coville River, Washington; and \$7000 at Petaluma Creek, California.

It should be pointed out that this particular bill would only authorize the work on these projects and that the funds themselves will not be available until Congress passes a bill actually appropriating the money, which will not be until at the very earliest during the session beginning next December.

In addition to these Coast projects which would be authorized the bill also authorizes preliminary examinations and surveys to be made at the following

places: Redwood City, California, channel, Sacramento River; Humboldt Harbor and Bay; Oakland Harbor; Petaluma Creek; Klamath River, California; Coquille River bar and entrance, Oregon; Yaquina Bay and entrance, Oregon; Port Orford Harbor, Oregon; Skipanon Channel, Oregon; Coos Bay, Oregon; Columbia River, above and below the city of Kalama, Washington; Grays Harbor, Washington; Gray's River, Washington; Bellingham Harbor, Washington; Duwamish Waterway, Seattle Harbor, Puget Sound and tributary waters; Saxon Harbor, Tongass Narrows, Alaska; Hyder Harbor, Alaska; Ketchikan Creek, Alaska; Port Alexander, Alaska; Wrangell Harbor, Alaska; Yukon River near Port Yukon, Alaska; Yukon River near Holy Cross, Alaska; and Honolulu Harbor, Kailhi Harbor and connecting channels, Hawaii.

Harbor improvement on the Pacific Coast and in the Hawaiian Islands must go forward with the increasing commerce of that part of the United States. Because of the many stages and pitfalls through which Pacific Coast harbor projects must proceed, it becomes highly desirable for the interested communities to have a well developed plan of harbor improvement so that the various stages through which projects must pass will be continually unraveling themselves. Often the delay of a year in the promotion of meritorious projects means that even increased difficulties may be encountered before they are adopted by Congress.—S. F. Business.

Why do Oil Companies Oppose Additional Gas Tax—???—Echo

The price of gasoline in California was increased by two cents last week. But the two cents of increase does not go into the construction of highways but into the pockets of the oil companies.

It is interesting to note that the oil companies also raised the price of gasoline two years ago when the two cent gasoline tax was under discussion.

Why do the oil companies so bitterly oppose the imposition of an additional one cent gasoline tax? It leads to the suspicion that perhaps, after all, the tax does not only hit the motorist but hits the oil companies as well.

Tax economists state that gasoline taxes have a tendency to keep down the price of gasoline and in reality actually compel the oil companies to pay a portion of the maintenance and construction costs of highway building from which they themselves greatly benefit in increased sales of their products.

The tendency toward lower consumption due to a rise in price stimulates competition and forces a reduction in price to maintain a steady rate of sale.

The National Automobile Club endorsed the gasoline tax in the sincere belief that it the most equitable manner in which to carry on California's great highway program and the surest method of economical road construction.

The gasoline tax also is the only way in which a revenue may be derived from the great tourist travel of the summer season and it is not such a burden as to deter the tourist from coming to California. He is probably familiar with the operation of the gasoline tax in the state from which he comes and the amount contributed is so small that it does not work a hardship.

The following statement on the gasoline tax was issued by the Chairman of the Board of Directors of the State Highway Department of Nevada on February 2, two days before the oil companies announced an advance in the price of gasoline:

"Up to this time the principal opposition to the gasoline tax comes from the great oil companies. Why do they object? They do not have to pay it. Is it not reasonable to suppose that there may be very good reasons from their standpoint for their opposition and that one of them may be that an increased cost of gasoline is contemplated? The public will cheerfully submit to an increase in the price of gasoline, if the increase be a tax which is used to build highways and which means an actual cash saving of more than twelve times the amount paid per year, but it will not cheerfully submit to an increase in the price of gasoline if it means increased profits to the oil companies.

California Patents

(Special Correspondence)

The following information is compiled by Munn & Co., New York, patent and trade mark attorneys.

Elert A. Hill, of Los Angeles. **LOCK.** This provides a means whereby the tumbler mechanism will be locked against manual operation when the bolt is freed and subject to retraction by the spring, and which is operable to free the tumbler mechanism when the bolt is held against retraction by the auxiliary holding means. Mr. Hill assigns his patent to Stop-Burglar Lock Company, of Los Angeles.

Charles T. Fabian, of Fresno. **GASOLINE COMBUSTION ENGINE.** This provides an engine or motor having increased leverage from the crank shaft to the pistons whereby more power is obtained with less fuel consumption.

John H. Wright and Bruce H. Grove of Byron. **GRADING CROSSING ALARM.** This relates to a grade crossing alarm of the type where a bell or light is caused to operate upon the approach of a train from either direction. This patent has been assigned one-tenth to Arthur E. Miller, of Sacramento, and one-tenth to Asaph Wilder, of Byron.

Eugene O. Murmann, of Glendale. **LOCK BOLT OPERATING MECHANISM.** This invention contemplates the movement of the bolt to its full protracted or retracted position by means of a partial rotation of the key or of a knob.

Marion Madsen, of Casalia. **TANK GAUGE.** The general object of this invention is to provide means whereby the level of a confined liquid, or the contents of a tank, may be ascertained from, or recorded at, a remote point.

Rowland O. Pickin, of Los Angeles. **ROTARY DRILLING TOOL.** This relates to improvements in drilling tools and has more particular reference to rotary drill bits adapted for use in drilling holes in the rock strata of varying hardness.

Benjamin Lapadula, of Pixley. **SCRAPER ATTACHMENT FOR TRACTORS.** This provides suitable connections and operative elements between a scraper and a tractor whereby they may be used in levelling land, and whereby the rotation of the driving wheels of the tractor may be utilized to unload the scraper at the will of the operator.

Clarence Leo Best, of San Leandro. **TRACTOR.** These tractors are of the self-laying track type, and the object of this invention is to produce a simple and compact structure which will be economical in construction and man-operation. Mr. Best assigns his patent to the Holt Manufacturing Company of Stockton.

John W. Andree, of Glendale, and Leo J. Kraps, of Long Beach. **BOILER FURNACE.** This provides a simple, efficient and effective gas burning furnace for a boiler, or the like.

Seeley L. Pillar, of Claremont. **POLE FOUNDATION.** This provides method and means for inserting wooden poles set up in the open, and therefore being subjected to various climatic conditions.

Oregon to Adopt Lien Law Bill—Measure up for Final Disposition

One of the vital measures in the Oregon legislative session is that bill, introduced by Fred W. German, representative from Multnomah county, affecting liens on structures, machinery, land, etc. The bill has had its first reading and will come up soon for final disposition.

The measure, known as house bill No. 376, has to do with all persons performing labor upon or furnishing material for any structure, wharf, ditch or any other piece of work. The bill as introduced follows in detail:

For an act to amend section 10191, Oregon Laws, relating to liens on structures, etc., machinery and land. Be It Enacted by the People of the State of Oregon:

Section 1. That section 10191, Oregon Laws, be, and the same is hereby amended so as to read as follows:

Sec. 10191. Every mechanic, artisan, machinist, builder, contractor, lumber merchant, laborer, teamster, drayman and other persons performing labor upon or furnishing material, or transporting or hauling any material of any kind to be used in the construction, alteration or repair, either in whole or in part, of any building, wharf, bridge, ditch, lume, reservoir, tunnel, fence, sidewalk, machinery or aqueduct, or any structure or superstructure, or in digging, drilling or boring any well, shall have a lien upon the same for the work or labor done or transportation or material furnished at the instance of the owner of the building or other improvement, or his agent; and every contractor, subcontractor, architect, builder or other person having charge of the construction, alteration or repair, in whole or in part, of any building or other improvement as aforesaid, shall be held to be the agent of the owner for the purpose of this act; provided, that every person, firm or corporation furnishing material or supplies of any kind to be used in the construction, alteration or repair, either in whole or in part, of any building, wharf, bridge, ditch, lume, reservoir, well, tunnel, fence, sidewalk, machinery or aqueduct, or any structure or superstructure, shall not later than five days after the date of the first delivery, to any contractor or agent, of such material or supplies for which a lien may be claimed, deliver or mail to the owner or reputed owner of the property, on, upon or about which said material or supplies are to be used, and to the mortgagee in any mortgage against said property which has been recorded in the mortgage records of the county, a notice in writing stating in substance and effect that such person,

firm or corporation has commenced to deliver material and supplies for use thereon, with the name of the contractor or agent or other person ordering the same, and that a lien may be claimed for all material and supplies furnished by such person, firm or corporation for use thereon, and no further notice to the owner or mortgagee shall be necessary. No material-men's lien for material or supplies furnished to the contractor or the agent of any owner or reputed owner shall be enforced unless the above provisions of this act with reference to the sending of notice to the owner or reputed owner have been complied with, and no such lien shall be given priority over any mortgage against the property, either as to the building or the property upon which the same is located unless the above provisions of this act with respect to the sending of notice to the mortgagee have been complied with; provided, further,

(a) That in all cases the sender of such notice upon demand of the owner or reputed owner, or mortgagee, shall furnish such owner or reputed owner, or mortgagee, a list of all material or supplies furnished for such improvement;

(b) That in all cases where a list of material or supplies has been furnished as required by subdivision (a) or the further provisions of this act, and notice of intention to commence suit to foreclose any lien created by this act has been given as provided for in this act, the sender of such notice of intention to commence suit, upon demand of the owner or reputed owner, or mortgagee, shall furnish such owner or reputed owner or mortgagee, within five days after such demand, a statement of the prices charged for such material or supplies;

(c) It shall be the duty of every person, firm or corporation appearing as plaintiff or cross-complainant in any suit to foreclose a lien created by this act, to plead and prove that a notice in writing stating that such person, firm or corporation, or others, intends to commence suit to foreclose his, or their lien, was mailed or delivered to the owner or reputed owner of the property upon which the lien is claimed, and to the mortgagee in any mortgage of record against the same, at least seven days prior to the commencement of the suit to foreclose such lien;

(d) No costs, disbursements or attorney's fees shall be allowed to any plaintiff or cross-complainant in any suit to foreclose a lien created by this act who fails to comply with the requirements of subdivisions (a), (b) and (c) of the further provisions of this act.

Construction Work for 1924 Classified

The following tabulation of construction statistics for the thirty-six Eastern states, comprising about seven-eighths of the total construction of the United States, based on contracts awarded during the year 1924, has been prepared by the F. W. Dodge Corporation, showing the number, floor area and valuation of various classes of buildings:

	No. of Projects	Sq. ft. New floor space	Valuation
Commercial buildings.....	15,228	111,897,600	\$503,763,800
Educational buildings.....	3,945	58,240,600	387,433,000
Hospitals and institutions.....	832	15,155,200	112,198,500
Industrial buildings.....	4,060	49,819,000	353,149,400
Military and naval buildings.....	56	360,900	2,201,600
Public buildings.....	626	6,422,300	36,315,000
Public works and utilities.....	9,464	6,945,300	723,910,700
Religious and memorial buildings.....	2,154	15,512,700	119,143,400
Residential buildings.....	94,094	421,736,800	2,051,643,400
Social and recreational buildings.....	1,689	19,191,300	123,040,800
Totals.....	133,156	704,282,900	\$4,481,807,000
	*159,997 buildings.		

L. A. BUILDING TOTALS

Since the Los Angeles city building department was established 36 years ago a total of 410,772 permits have been issued for new buildings and structures and alterations and additions with an estimated cost of \$957,566,616. The following table of permits for this period is compiled by the Los Angeles city building department:

year	Permits	Valuation
1889.....	582 (Estimated)	\$2,278,725
1890.....	750 "	1,104,623
1891.....	650 "	1,315,336
1892.....	896 "	1,938,661
1893.....	1,348 "	1,647,420

1924.....	51,134 "	150,147,316
Totals, 410,772		\$957,566,616

L. A. BUILDING CURTAILMENT HITS LUMBER TRADE

Curtailement of residence construction in Southern California is one of the principal reasons for the slump in the coastwise lumber trade, Sam Y. Knight, district manager for the McCormick Steamship Company at Los Angeles declares.

Knight said that, although there was considerable office and apartment house building now under way in Los Angeles and other Southern California cities, the building of bungalows and residences had fallen off materially. During 1924 Los Angeles consumed approximately 260,000,000 board feet of lumber and led every city in the United States in the amount of lumber used last year.

The figures for the present year are far below last year's figures for a corresponding period, and, as a result of the slump, between 40 and 50 coastwise schooners engaged in the coastwise lumber trade are now tied up because of the lull in the movement.

Knight also declared that business conditions in Los Angeles were not as good as they might be, and that the number of travelers to the southern metropolis was not as heavy as in past years. He said that Eastern travelers were showing a preference for Florida, the West Indies and Europe this season.

Despite the lull in the lumber movement, Knight said that there was considerable activity in San Pedro and Wilmington. He added that the southern harbor board was perfecting plans for the dredging of the entire water front to a depth of 35 feet, and this, he declared, would attract larger passenger and freight carriers to the port. He asserted that there would be a return to normalcy in the next few months, if not sooner.

: TRADE NOTES :

The Gardner-Payne Co., 314 Sharon Bldg., San Francisco, has taken over the offices and business of David E. Kennedy, Inc., New York, and will maintain the same standard of service and workmanship. The Gardner-Payne Co. will furnish and install Everlastic tile floors, rubber tile floors, cork tile floors and Kencor Bulletin Boards. In addition to this line the Gardner-Payne Co. will do a contract business in furnishing and installing all kinds of Linoleum Floors. Ample stocks of all these products will be warehoused for immediate delivery. Joseph T. Phelan, who has been in charge of the Kennedy San Francisco office, will continue in the same capacity for Gardner-Payne Co. Samuel Bome, for five years connected with the Kennedy New York City office, will assist Mr. Phelan, materially strengthening the organization by concentrating on technical service.

Sacramento Mortar & Sand Co., plans to expend approximately \$100,000 in improving its plant on the American River at Twenty-fifth street, Sacramento. The announcement follows the filing of new articles of incorporation by that company under the name of the Western Building Material Company. The new corporation, headed by Herbert Simpson, is capitalized at \$300,000 and takes over the business of the old corporation. Under the new arrangement work will start at once on a new plant to adjoin the sand plant for the manufacture of mortar for plaster, brick and concrete work. In addition to new equipment it is planned to secure a rail connection to enlarge the field of sales.

Arrowhead Iron Works, Inc., of Kansas City, Mo., manufacturers of steel flooring, grating and stair treads, are completing arrangements to establish a branch plant in the East Bay District, W. B. La Force, now residing at 426 Bellevue Ave., Oakland, will be resident manager for the branch.

Henry Cowell Lime & Cement Co., 81 Franklin St., Oakland, will distribute products in the East Bay District for the Certain-Teed Products Corporation. A complete stock of the materials will be carried at the First and Franklin street warehouse.

Annual meeting of the California Building Material Co. will be held in Room 500, New Call Bldg., San Francisco, Feb. 20, according to announcement of C. A. Roller, secretary of the company.

Matheny Bros., Oakland lumber dealers, will establish a warehouse and yard at 11th and E streets, Marysville. The yard will serve as a distributing station for the Sacramento Valley.

Reports are current that the Pacific Coast Steel interests and the Columbia Steel Corporation are negotiating to take in under a merger, the Judson Manufacturing Company.

Claude E. Linn and L. Dyer Linn of Gridley have leased a site, 100 by 140 feet in Live Oak, Sutter county, and will establish a lumber yard.

Atlas Building Co., capitalized at \$50,000, has been incorporated in San Francisco. Directors are: N. Colapietro, E. W. Gardner and Chas. A. Toepke

San Francisco will be the shipping point for lumber products of new mills which are soon to be established at Gamble and Ludlow, Wash., by the Charles R. McCormick Lumber Company and Charles R. McCormick & Co. The McCormicks are completing negotiations to acquire 100,000 acres of fir, spruce and cedar timber land in the Puget sound district, and with acquisition of the property will begin production at the mills. The timber and mill deal involves approximately \$20,000,000. According to Charles R. McCormick, San Francisco will be the shipping center for the lumber products to all parts of the world.

To meet the building developments of the East Bay cities, the Oakland branch of the W. P. Fuller Company has completed enlargement of its quarters at Tenth and Alice Streets. W. R. Sprinkel is branch manager for the company in Oakland. The branch now occupies 40,000 square feet, the entire basement and three floors of a building with a frontage of 100 feet on Alice Street and 100 feet on Tenth Street and a warehouse at Third and Jackson Streets with 22,500 square feet of floor space.

Articles of incorporation of the Ralph McLeran Co., engineers and contractors, with the principal place of business at San Francisco, have been filed with the Secretary of State at Sacramento. The company is capitalized at \$500,000. Associated with Mr. McLeran in the company are: B. Alfred Howkins and Milton G. Harper.

Aggregating a total investment of \$300,000, negotiations were completed Feb. 14 for the purchase of the Pope & Talbot Lumber Company of Puget Sound by the McCormick Steamship Company of Los Angeles. The lumber company operates two of the largest mills in the northwest and is said to own timber rights on 500,000 acres of land near Sattle.

Certified articles of incorporation of Bay Port Mill & Lumber Co., capitalized at \$75,000, have been filed in Redwood City. Directors of the company are: P. J. Sommer, Henry Newburgh, Leon Torneck and Fred Leve, all of San Francisco, and M. J. Grimm of Oakland.

Premier Electrical Equipment Co., capitalized at \$1,000,000, has been incorporated in San Francisco. Directors are: G. A. Starkweather, John C. Altman, Richard S. Goldman, Leland S. Fisher and A. McAdoo.

Van Olson, contracting painter, has opened a paint and wall paper store at 115 North Court Street, Visalia, and will carry a complete line of Milligan paints in addition to wall paper stocks etc.

George Farrell, Mathais B. Farrell and Robert E. E. Farrell have formed a co-partnership and will operate under the trade name of George Farrell and Sons with headquarters at 180 Jessie Street.

Calavares Cement Co., of Wilmington, Delaware, has filed certified articles of incorporation with the county clerk in San Francisco.

THEY ARE busy.

AT THE office.

OF THE Pacific Gravel Co.

OR T. I. Butler Co.

AS SOME know them.

BECAUSE THE boss.

MR. T. I. Butler, Esq.

IS BUILDING sand bunkers.

AT SEVENTH and Berry street.

FOR THE exclusive use.

OF SANDY Pratt's sand.

FROM PRATTCO (Monterey County).

BUTLER WILL not only.

HANDLE "PRATTCO Amber" No. 4.

AND "PRATTCO Amber" No. 2.

OR THE coarse and fine sand.

BOTH USED.

FOR BRICK mortar.

AND PLASTERING.

BUT SANDY Pratt, President.

OF THE Pratt Building Material Co.

DOUGLAS 300—"easy to remember."

WILL MIX "Pratcco Amber" sand.

USING THE fine (No. 2) sand.

AND THE coarse (No. 4) sand.

SOMETIMES 50% of each.

SOMETIMES 40% of fine sand.

AND 60% of coarse sand.

ANY WAY to please you.

BE YOU an architect.

OR AN engineer.

YOU CAN secure.

FROM T. I. Butler.

AN ABSOLUTELY perfect sand.

FOR CONCRETE work.

THE MORE particular you are.

THE BETTER Sandy Pratt.

AND T. I. Butler.

WILL LIKE it.

FROM DAY to day.

IN EVERY way.

ON ANY job.

YOU CAN have your sand.

MIXED FINE or coarse.

AS YOUR little heart desires.

IF YOU phone Butler—Hemlock 480.

OR SANDY Pratt.

DOUGLAS 300—"easy to remember."

"I THANK you."

This is a "quiet day" in the office of T. I. Butler Co. (Pacific Gravel Co.) since they told the world they were building bunkers for Sandy Pratt's wonderful sand—"Pratcco Amber" from Monterey County—50% of No. 4 (coarse) sand and 50% of No. 2 (fine) sand.

WHITCO CASEMENT HARDWARE

"The Easy Hardware"

A Sash Fitted With WHITCO Cannot Sag

The fact that WHITCO supports the sash, at both top and bottom, at a point well beyond the joint between the stile and rail—which is the weak spot when casements are hung on butts—

Together with the way in which its sturdy brass sash-plate reinforces that joint—And the greatly increased holding power of its screws, which are set in at right angles to the strain—

All combine to insure a stronger and much more dependable installation than is possible with any arrangement of butts and adjusters.

WHITCO takes the place of butts and adjusters for swinging and controlling casements and transoms. One size fits all sash.

A set consists of two pieces—one for the top and one for the bottom of a casement, and one for each side of a transom. Both are identical, except that one is the reverse of the other.

The installation is simple. After the carpenter has housed the sash-plate into the top and the bottom of the casement, all he has to do is to turn the sill plate at right angles to the sash, set it into the opening and screw one sill plate to the header and the other to the sill.

There is nothing for either the architect or the builder to bother about. No special sash or frame detail is required. As WHITCO is entirely concealed the usual trouble of matching hardware finishes is eliminated.

"How many Sash?" is the only information needed.

WHITCO is sold through the hardware trade only.

In Solid Brass per set, \$2.25

In Rust-proofed Steel per set, 1.75

This is the third of a series of pages illustrating and describing the many practical qualifications of WHITCO hardware, in addition to its superiorities as a means of operating and controlling casement sash and transoms.

WHITCO makes it easy and safe to clean the outside of a casement window from within the room.

NOTICE TO CONTRACTORS

(Boundary Fence—Pearl Harbor)

The Bureau of Yards and Docks invites attention to the fact that it will open proposals, in the near future, on Specification No. 5061, Boundary Fence, Naval Operating Base (Naval Yard), Pearl Harbor, T. H. The work includes approximately 5400 feet of nine foot, diamond mesh, wire fencing, and posts, spearheads, rails, etc., for 2300 feet of additional fencing.

In the event that this work is of interest to you, you should forward to the Bureau of Yards and Docks, Washington, D. C., to the Commandant, Naval Operating Base, Pearl Harbor, T. H., or to the Commandant, Navy Yard, Mare Island, Calif., a check or postal money order for \$10. payable to the Chief of the Bureau of Yards and Docks as security for the safe return of the drawings and specification.

Inasmuch as the specifications and accompanying drawings are nearing completion, it is suggested that you submit your application as soon as practicable in order that the bidding data may be forwarded when the specifications are received from the printer.

Prospective bidders on the West Coast should make application at the Navy Yard, Mare Island, Calif., for bidding data.

NOTICE TO CONTRACTORS

Hangars—Pearl Harbor and Coco Solo

The Bureau of Yards and Docks invites your attention to the fact that it will open proposals, April 3, 1925, on Specification No. 5019, Hangars, Pearl Harbor, Hawaii, and Coco Solo, C. Z. Each hangar will have concrete floor, steel frame, steel sash, steel sliding doors, asbestos covered metal, built up roofing, cast-iron piping and electrical work. The hangar at Pearl Harbor will have wood roof sheathing and terra cotta piping. The hangar at Coco Solo will have a precast gypsum tile roof deck. Alternative bids will be received on doors of the bascule type and on corrugated asbestos siding.

In the event that this work is of interest to your firm, you should forward immediately to the Bureau of Yards and Docks, Navy Department, Washington, D. C., to the Commandant, Navy Yard, Mare Island, Calif., to the Commandant, Naval Operating Base, Pearl Harbor, T. H., or to the Commandant, 15th Naval District, Balboa, C. Z., a check or postal money order for \$20, payable to the Chief of the Bureau of Yards and Docks, as security for the safe return of the drawings and specification, which will be forwarded as soon as available.

Prospective bidders on the West Coast should make application at the Navy Yard, Mare Island, Calif.

NOTICE TO CONTRACTORS

(Memorial Hall, Hanford, Cal.)

Notice is hereby given, that sealed bids will be received and opened by the Board of Supervisors of the County of Kings, State of California, at the office of said Board in the City of Hanford, up to but not later than three o'clock P. M. Thursday, March 5, 1925, or the expiration and completion of the Veterans' Memorial Building to be erected on property belonging to said county in the Civic Center in the City of Hanford.

The bids to be submitted and the work to be done in accordance with the plans and specifications prepared by Swartz and Ryland, regularly certified architects, located in practice under the laws of the State of California, employed by said Board of Supervisors, and under the direction and supervision of said architects.

A call for bids published in this section indicates that bids are desired from other than local bidders. Maximum competition is desired, and this is assured through BUILDING AND ENGINEERING NEWS which reaches every worth-while contractor and materialman in Central and Northern California who bids on public work.

Rate: 10 cents per line, per insertion.

All official calls for bids of the California State Highway Commission and Nevada State Highway Commission are published in this section.

Bids will be received on work according to the following aggregation:

- Prop. No. 1. General construction.
- No. 2. Masonry.
- No. 3. Electrical work.
- No. 4. Roofing.
- No. 5. Plumbing, Sheet Metal and Heating.
- No. 6. Painting.

Plans and specifications may be obtained from the office of the architects, Room 624, Rowell Building, Fresno, California, or from the office of the County Surveyor, in the County of Kings, in the Kings County Court House, at Hanford, California.

All bids should be presented on bid forms to be obtained from the architects. Each bid must be accompanied by a certified check on some responsible California bank in a sum not less than Ten (10%) per cent of the total amount of the bid, made payable to the Board of Supervisors, to be forfeited to the County of Kings as agreed and liquidated damages, should the party or parties to whom the contract shall be awarded fail to enter into the contract within five days after the award or to give bond required by the Board for the faithful performance of the contract.

A good and sufficient bidders' bond will be accepted in lieu of the certified checks.

The Board reserves the right to reject any and all bids.

Dated, February 5, 1925.
(Seal) E. F. PICKERILL,
Clerk of the Board of Supervisors,
County of Kings, State of California.

STATE OF CALIFORNIA

CALIFORNIA HIGHWAY COMMISSION

(SAN JOAQUIN COUNTY)

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received at the office of the California Highway Commission, 515. Parnum Bldg., Sacramento, Cal. until 2 o'clock P. M., on March 16, 1925, at which time they will be publicly opened and read, for construction, in accordance with the specifications therefor, to which special reference is made, of portions of State Highway, as follows:

San Joaquin County, between Stanislaus River and Turner Station (X-S.J.)

QUANTITY SURVEYOR

Valuation Engineer

ARTHUR PRIDDLE

693 Mission Street, at Third St.

San Francisco, Calif.

Telephone Douglas 8-4-9-3

General Listing Bureau

Architect's Preliminary Estimates

4-A & B), about eleven and six-tenths (11.6) miles in length, eight and nine-tenths (8.9) miles to be paved with Portland cement concrete and two and seven-tenths (2.7) miles to be widened with Portland cement concrete shoulders.

San Joaquin County, a bridge 24 feet wide across the San Joaquin River near Mossdale (see map), consisting of one 200 foot fixed steel span, one 124 foot steel bascule span and eight 26 foot reinforced concrete girder approach spans on concrete piers and bents.

Plans may be seen, and forms of proposals, bonds, contract and specifications may be obtained at the said office and they may be seen at the offices of the Division Engineers at Los Angeles and San Francisco, and at the office of the Division Engineer of the division in which the work is situated. The Division Engineer's offices are located at Willits, Redding, Sacramento, San Francisco, San Luis Obispo, Fresno, Los Angeles, San Bernardino and Bishop.

A representative from the Division office will be available to accompany prospective bidders for an inspection of the work herein contemplated, and Contractors are urged to investigate the location, character and quantity of work to be done, with a representative of the Commission. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the Division office.

No bid will be received unless it is made on a blank form furnished by the Commission. The special attention of prospective bidders is called to the notice to Contract to be annexed to the blank form of proposal, for full directions as to bidding, quantities of work to be done, etc.

The California Highway Commission reserves the right to reject any and all bids or to accept the bid deemed for the best interests of the State.

HARVEY M. TOY,
LOUIS EVEREDING,
N. T. EDWARDS,
California Highway Commission.
R. M. MORTON,
State Highway Engineer.
J. W. F. MINON, Secretary.
Dated February 16, 1925.

NOTICE TO CONTRACTORS

(Reinforced Concrete Walls—Filtration Plant.) Ad. No. 30

Sealed bids will be received by the undersigned for the City Council of the City of Sacramento at the Council Chamber of said City Council in the Sacramento City Hall, on J Street, between Ninth and Tenth Streets, between the hours of 8:15 and 9:15 o'clock P. M. on the 26th day of February, 1925, for the furnishing of all labor and materials necessary for the construction and constructing reinforced concrete Partition Wall, Baffle Wall, Driving Piles, etc., at the Filtration Plant, as provided for in Plans and Specifications adopted by the City Council on date of February 5, 1925.

All such proposals must comply with the requirements of the City ordinances applicable thereto, and the City Charter of the City of Sacramento, effective June 30, 1921, and bidders are hereby cautioned that proxy bids will not comply with the same and will be considered.

Bids must be submitted upon printed proposal and affidavit form, supplied by the City Clerk without charge to the prospective bidders, and enclosed in an envelope marked "Sealed Proposals for Construction of Walls, etc., at the Filtration Plant."

At the same time with the execution of the Contract for said work, successful bidder will be required to furnish a contract bond for faithful performance of the work, in the sum of 50%

BIG PRODUCTION IN STEEL BARS IS 1925 PREDICTION

Night and day shifts, overtime employment and orders that are taxing the capacity of the mills means a production of 450,000 to 500,000 tons of rail steel reinforcing bars in 1925, according to a forecast by the Rail Steel Products Association.

Production is expected to double the tonnage of 1924, and save from the "freak" period immediately following the war, it will probably be the high water period of the industry.

Great activity in the construction of apartments, hotels, office buildings and public institutions, which made 1924 a \$5,000,000 building year for America, is continuing through the winter period, the association says.

"There also seems to be a continuation of last year's activity in road building," the survey says. "From the northern states, still in the grip of winter, come reports of preliminary work on huge road programs. Warmer states report extensive activity for this time of year."

"Demand for reinforcing bars for the various uses in highway construction, as well as for general building purposes, is confidently expected to carry production to a new high record in 1925."

Records compiled by the state board of forestry show that during the season of 1924, forest fires in different counties of California resulted in a property loss of approximately \$375,000 due to the destruction of sawmills, buildings, saw logs, railroad tracks, bridges and other improvements and materials exclusive of standing timber. Some of the heaviest losses occurred through the destruction of sawmills and equipment. A total of forty-nine fires are listed in the report.

Alameda County supervisors endorse an increase of one cent a gallon in the gasoline tax, as proposed in a bill before the State Legislature.

KOEHRING DANDIE Light Mixer

Dandie with steel disc wheels and solid rubber tires; power charging skip, water tank and gasoline engine.

Dandie with steel trucks; power charging skip, water tank and gasoline engine.

EQUIP it to your special needs. Rubber tires to save the time waste of between-job hauls, and to expand your working territory. *Light duty hoist. Low charging platform or power charging skip. Automatic water-measuring tank.*

Most important, you can be sure of full capacity—utmost reliability—and long service life—because this mixer is Koehring built, engineered and constructed to out work, out last anything in the light mixer field. Price? Not the lowest price

—no—but the most remarkable value of all light mixers—and still within the range of light mixer prices.

CAPACITIES

4 and 7 cu. ft. mixed concrete, steam or gasoline power. May be equipped with power charging skip or low charging platform with hopper, light duty hoist, automatic water measuring tank. Mixes mortar as well as concrete.

FAMINE IN TIMBER DISMISSED AS MYTH BY EXPERT

America's preconceived notions regarding forest conservation will be radically readjusted if Alex H. Oxholm, chief of the lumber division of the department of commerce and noted timber authority, is successful in his attempts to convince timbermen of the logic of his ideas.

A firm believer in reforestation and an ardent advocate of fire prevention in the lumbering sections of the country, Oxholm sees no worry for the future supply of timber in the United States.

"Our forests will never give out here on the Pacific Slope," he says. "For decades popular sentiment has been that each year the forests would die out, they haven't, and they won't. Reforestation will take care of that and the normal second stand will fill the void left by cutting."

Oxholm, who has recently returned to the United States after studying conditions of the timber industry in Europe for two years, has no sympathy with those who advocate saving the big trees.

The report of the U. S. Employment Service, just issued by Director Francis J. Jones, notes that there is general building activity throughout the State and that it will continue for some time to come. On the other hand, the director states, the supply of building tradesmen will more than meet the demand. A slight increase in the surplus of common labor also is reported.

NINETEEN BILLION DOLLARS TO ELIMINATE U. S. GRADE CROSSINGS

The average cost of eliminating grade crossings averages between \$75,000 and \$100,000, according to Railway Age figures. These figures closely follow reports to the Interstate Commerce Commission that grade crossing casualties were greatly reduced in the third quarter of 1924, due to the intensive safety campaign carried on by the railroads.

There were 252,507 grade crossings in the United States at the end of 1921. In 1922, 705 of these crossings were eliminated at a cost of \$70,000,000, but 4337 new crossings were created by opening of highways across railways, and so there were 3,732 more crossings at the end of 1922 than at the end of 1921. As new grade crossings were added at an equal rate in 1922 it is estimated that at the end of 1923 there were 260,000 grade crossings in the country.

"The cost of eliminating all the grade crossings that existed at the end of 1923," says the 'Age' would have been about \$19,500,000,000. If the railways should make this huge capital expenditure they would be entitled to earn an annual return of 5 1/4 per cent upon it, or \$1,122,000,000. Compared with this huge increase in capital cost, the savings that grade crossing elimination would make in operating expenses would be utterly trifling. Therefore, practically the entire resulting increase in railway costs would have to be met by advances in freight and passenger rates.

"The railways are now making capital expenditures of about \$1,000,000,000 annually to enable them to handle increased business and reduce operating costs. To eliminate all the grade crossings that existed at the end of 1923 would require the investment of another \$1,000,000,000 annually for 19 years. If new grade crossings continued to be opened as fast as they were in 1922 there would still be, at the end of the 19 years, 54,340 grade crossings."

The 'Age' points out that in 1923 the total number of persons killed in automobile accidents at grade crossings was only ten percent of the total number killed in all automobile accidents. In other words it is proposed that the railways, to reduce the automobile accident toll, billion-dollar annually for 19 years, the investment of which would have no effect upon 90 per cent of the automobile accidents that occur.

FOREST WEEK

The week heretofore annually set aside by the President as Forest Protection Week will hereafter be designated as American Forest Week, and its program will be directed by a national citizen's committee instead of solely by the United States Forest Service, according to a decision arrived at by an informal meeting in Washington, D. C., of foresters, outdoor people, and representatives of the forest industries. Frank O. Lowden, former governor of Illinois, presided and was elected permanent chairman of the directing committee. The week was fixed as that of April 27-May 3.

CONDITIONS FAVORABLE FOR PUBLIC WORK CONSTRUCTION

A brief survey of conditions in this fore part of 1925 indicates a season highly favorable to the construction of public works—that is, public works of proper character and wise conception, says Engineering & Contracting. In public interest no time is favorable to the construction of pork barrel projects or mere whims. The same advantageous circumstances exist for private construction — particularly to such as may be financed through the sale of bonds.

The first of these favorable conditions is our national general prosperity, which has been so widely discussed and so largely recognized that no further elaborations are necessary. Sound business conditions, rapidly rising standards of living, and a growing population all require the development and extension of public works and make possible such works without the imposition of undue tax burdens.

A second favorable condition is the money market. Money is plentiful, and bond interest rates have declined accordingly. Investors, to be sure, are more canny than they once were; they ask more questions before exchanging coin for securities, and they perhaps drive harder bargains than formerly; but when once convinced of the soundness of a project, they are ready with their funds at very moderate rates of interest. It is quite possible that these rates will go still lower, but unlikely that such a movement will be either wide in scope or of long duration; business needs to much money, and we are no longer swelling our supply with European gold. He who waits for the very rock bottom of interest may find that he has missed it, and is almost sure to find that he has increased his costs in other ways.

In most localities the labor situation today is good from the standpoint of the constructor. There is enough surplus to make men anxious to get and to keep jobs; more than which an employer can scarcely wish, since extensive unemployment comes only with hard times. Wages are high, to be sure, but it takes a confirmed optimist to foresee a general reduction. In fact many employers desire no reduction. Furthermore labor efficiency has gone up tremendously.

In the material market there is less uniformity. Probably some prices are due for a decline, but others are as likely to rise. The trend of wholesale price levels as indicated by the Bureau of Labor index, has been upward for the past four months, and is likely to continue the movement at a moderate rate for some time to come. The future of particular commodity prices is generally hard to predict, though at the present time there is good reason to expect no worth while reductions in iron, steel or copper.

All in all it seems unlikely that the next few years will see any time more favorable to both public and private construction than the year 1925. That conditions may be much less favorable is undeniable.

NOMINATING BOARD NAMED

The Fresno Builders' Exchange has named G. A. Fariz, A. W. Bernhauer and W. K. Hendrick, a nominating board to select candidates who will run for exchange positions.

THE OBSERVER

WHAT HE HEARS AND SEES ON HIS ROUNDS

The Pittsburgh Mines Company, a holding concern, financed to a large extent by Wall Street interests to exploit the iron ore resources of California, looking to the establishment of smelters and steel mills on the Pacific coast, has virtually decided to lease from William McKinney a 7000-acre mountainous tract west of San Luis Obispo, it is reported. The lease is for development in the near future of its iron ore, which will be turned into finished product at a manufacturing plant to be constructed in the Los Osos valley or at some other point within easy access to the deep water harbor at Avila.

San Francisco carpenters are among the lowest paid in the country, according to William C. Cole, member of the general executive board of the United Brotherhood of Carpenters and Joiners, who is back in San Francisco after a tour of Eastern cities in the interest of the union. The prevailing scale for carpenters in San Francisco is \$8.35 a day, whereas in Los Angeles established by the Industrial Association several years ago. Cole gave the following as the scales of minimum wages paid carpenters in other cities: St. Louis, \$12 a day; Pittsburgh and Chicago, \$11; New York, \$10.50; Cleveland, \$10.

The protracted dispute between the United Brotherhood of Carpenters and Joiners of America and the Amalgamated Sheet Metal Workers' International Alliance regarding jurisdiction over certain building operations has culminated in the creation of the International Union of Building Trades Carpenters, according to Associated Press dispatches, which state that the organization was formed in Cincinnati on January 24th. The new union was formed by representatives of independent carpenter unions in Ohio, New York, Texas, Missouri, Kansas, Michigan and Kentucky.

Utica Gold Mining Co. and Hobart Estate are reported to have plans prepared for a large storage dam and power plant on the Stanislaus river at Spicers Meadow. The dam and site, it is estimated, will cost \$2,500,000. Dam will impound 65,000 acre feet of water for power and irrigation purposes. The Pacific Gas & Electric Company is reported to be interested in the power development.

Frank H. Green has been appointed by the Eureka city council to fill the office of city engineer during the suspension of Harry H. Hannah who was recently arrested on a charge of feloniously defrauding the city treasury.

Albert E. Carter, commissioner of public works for the city of Oakland, plans to resign and "re-enter the active practice of law." He will be associated with Fred C. Peterson, who has been practicing in San Francisco and Oakland for several years.

A west coast branch of the National Lumber Manufacturers' Ass'n., will be established in the Northwestern Bank Bldg., Portland, Ore., March 1. The office will be in charge of Harold F. Hubbs.

The Pacific Lumber Inspection Bureau report for 1924 shows a slight increase over the waterborne movement for 1923, 4.4%. California, Cuba, Africa, India, Japan and the west Indies took less, but the Atlantic coast absorbed more than enough to make up. The total movement is given as 4,465,391,941 ft. of which 1,671,114,448 ft. came to California, 1,264,854,180 ft. went to the Atlantic coast; 691,919,844 ft. to Japan, 237,979,206 ft. to Australia and 192,687,625 ft. to China. Egypt, picked up from 2,761,364 ft. in 1923 to 7,239,181 ft. in 1924. It should be noted that California absorbed over 37% of the entire movement.

A proposal to have the building trades accept a reduction of wages during the Winter months has been made by the Associated Building Interests of St. Louis. The reduction that is suggested ranges from 16 to 20 per cent of the regular rates, reductions to start December 1st and stop April 1st. All of the building trades will be asked to consider the same proposition. Committees representing the Carpenters' District Council and the Building Laborers' District Council have already held conferences with a committee of the employers to discuss the proposal.

Alameda County Building Trades Council and affiliated unions have adopted resolution opposing a bill introduced in the State Legislature by Assemblywoman Mrs. Snyder of Berkeley which would authorize the State Department of Public Works and the prison director of California to employ convicts "in the construction, repair and erection of public buildings."

The average labor rate for 1924 in the building industry was 6 per cent higher than 1923 according to statistics compiled by the Associated General Contractors of America. The average prices paid by contractors for materials during 1924 was about 4 per cent less than during 1923, states the report.

Edgar R. Magee, vice-president of the Southwest Tile Contractors' Association, announces that the Tile & Mantel Contractors' Association of America, meeting at Louisville, Ky., decided to hold its next annual convention in February, 1926, in Los Angeles.

David B. Hunter, 84, pioneer in the lumber industry in the east bay section, died at his home in Berkeley, Feb. 20. Hunter founded the Hunter Lumber Company but in recent years had been in retirement. He was a native of Pennsylvania.

Peter J. McCormick has been appointed plumbing inspector of South San Francisco. McCormick succeeds Carl Blank who resigned to devote his time to private business.

Hotmer interests of Wisconsin will construct a \$1,500,000 hydro-electric plant at Glazier Bay, on the Portland Canal, just below the Salmon river, according to word from Vancouver, B. C.

TRADE NOTES

Russian River Development Company announces the purchase of a \$50,000 dredger to operate in connection with a \$150,000 gravel plant which the company will establish between Jenner & Duncan's Mill. A government permit has been granted the company to dredge a channel between the above points.

The Southern California Iron and Steel Company plant has been taken over by the Pacific Coast Steel Company of Portland and San Francisco, it is announced by A. C. Denman Jr., president of the Los Angeles concern. Changes in the Southern California directorate in line with the merger agreement are under way.

The Pacific Aluminous Cement Company with the principal place of business as San Francisco has been incorporated with a capital stock of \$50,000. Directors are: Alfred Whittell, Pierre Zucco and Esmond Schapiro.

Coney & Kuchel Electric Works, capitalized at \$100,000 with the principal place of business in San Francisco, has been incorporated. Directors are: A. E. Coney, Chas. J. Kuchel and L. T. Courtney.

California Mission Stucco Co. of Los Angeles, announces that on account of possible confusion, due to a similarity of names, it has adopted the name Ridge Stucco Products Co.

San Hedron Timber Company of San Francisco has been incorporated with a capital stock of \$500. Directors are: Oliver C. Haskett; John H. Merguire and John R. Selby.

Triumph Steel Co. is reported to have started construction of a plant on the Batchelor and Trumbull properties at Aptos, near Santa Cruz.

Triumph Steel Co., with offices in Reno, Nevada, has filed certified articles of incorporation in San Francisco.

Offices of the Pacific Clay Products Co. have been moved to 650 Chamber of Commerce Bldg., Los Angeles.

GENASCO STUCCO BASE

The Barber Asphalt Company, Philadelphia, has developed a stucco base made of high grade all rag felt, thoroughly saturated and then coated with asphalt. A coating of crushed Pearspar or stone chips is then imbedded in the upper surface of the felt under pressure and while the asphalt is still hot. The pieces of Pearspar form a "key" or "anchor" for the stucco. The support of the stucco does not depend on the cohesion of the stucco to the pieces of Pearspar but it is mechanically supported by the pieces of stone protruding from the felt. Genasco Stucco Base is furnished in rolls containing 106 1/2 square feet, sufficient to cover 100 sq. ft. of surface. The rolls are 36" wide, having a 2" selvage edge and weight approximately 105 to 110 pounds per roll. A sufficient number of galvanized nails to allow proper nailing are furnished with each roll.

ORGANIZATION NEWS

Organizations having a direct connection with the construction industry are invited to submit news for publication in this department.

CEMENT FINISHERS OUSTED BY PLASTERERS

Some time ago the plasterers' union of Oklahoma City, Oklahoma, took action that resulted in its claiming jurisdiction over the cement finishers. The move was a part of the fight to maintain the closed shop in the city. But the union has had to withdraw the claim of jurisdiction and to oust the cement finishers from the union altogether. The cause was this:

Some of the plasterers were employed to plaster the Kerr building, on which an open shop contractor was using open shop cement finishers. The plasterers appealed to the general contractor on the structure to have the open shop cement finishers put off the job. Of course, the general contractor refused. There was but one thing for the plasterers to do if they were to complete their contract and yet save face as union men. They did it. They ousted all the cement finisher members of the plasterers' union and forced them to seek work as open shop men if they were to work at all. Many of the cement finishers already are registered and are employed as open shop craftsmen.—American Contractor.

CARPENTERS TURN DOWN FIVE DAY WEEK

The carpenters' Union of Lynn, Mass., by a referendum vote rejected the proposal that the working hours be cut down from 44 hours a week to 40. At the same time the union voted down the suggestion of asking for a wage increase from \$1.10 per hour to \$1.25. In 1921 the carpenters had the five day week and a wage scale of \$1.00 per hour. The Master Builders Association asked for a 44 hour week and a scale of 90 cents. The controversy was placed in the hand of an arbitrator who ruled for a 44 hour week and a scale of 93 cents. The painters in Lynn work 40 hours a week during six months of the year, and during the other six months 44 hours.

PROPOSE NEW BUILDING LAWS FOR SAN JOSE

The Builders' Exchange of Santa Clara County has appointed a committee to confer with the Chamber of Commerce regarding a new building law for San Jose. The committee consists of Ralph Wyckoff, architect; R. O. Summers and R. H. Borchers.

Announcement was made at the bi-monthly meeting of the exchange, held February 18, that the application of the Santa Clara County builders for a membership in the National Association of Builders' Exchanges had been granted.

STEEL MEN ORGANIZE

Nineteen fabricators have organized the Structural Steel Institute of California and appointed John L. Clymer manager.

The following executive committee was elected: P. F. Gillespie, Judson Manufacturing Company; Harry Mortenson, Mortenson Construction Company; Howard Morris, Western Iron Works; Charles E. Spencer, California Steel Company; S. S. Herrick, Herrick Iron Works.

Under the circumstances connected with the engagement to surface floors in a building for a general contractor it was held by the Texas Supreme Court in the case of Shannon vs. Western Indemnity Company, 257 Southwestern Reporter, 522, that a carpenter was an independent contractor, and not an employee of the general contractor.

Therefore, it was held that there could be no recovery against the general contractor, or his insurer, under the Texas Workmen's Compensation Act, on the theory that the carpenter was merely an employee. In the course of its opinion, the Supreme Court said:

"The courts have formulated many definitions of the term 'contractor.' When analyzed there is but little difference in their substantial meaning. Among the many definitions we think the following is perhaps the most accurate and expressive:

"A contractor is any person who, in the pursuit of an independent business, undertakes to do a specific piece of work for other persons, using his own means and methods, without submitting himself to their control in respect to all its details. The true test of a contractor would seem to be that he renders service in the course of an independent occupation, representing the will of his employer only as to the result of his work, and not as to the means by which it is accomplished."

"The outstanding quality of any contract, as touching the question of the independence of same, and which is ultimately the one most decisive of the question, is the one of the right of control of the person employed by the employer with respect to the details of the work. All other elements bear some relation to that one, and directly or indirectly indicate the presence or the absence of the right of control."

GENERAL CONTRACTOR "ESSENTIAL ELEMENT" IN CONSTRUCTION

The following resolution has been adopted by the Master Builders' Association with offices in the Worcester Building, Portland, Ore.:

WHEREAS: The Interdepartmental Bureau of Contracts and Adjustments of the United States Government has ruled after full hearings on behalf of the separate contract system of handling public contracts, that the General Contractor is an "ESSENTIAL ELEMENT" in building construction, and is incorporating same into a Federal Code on Contracts & Adjustments, and

WHEREAS: It is the collective unanimous judgment of the Master Builders Association, Portland, Oregon, that the interests of the OWNER are best served by the award of the entire contract to one General Building Contractor, in one general contract, and

WHEREAS: There is now a renewed effort being made to segregate the bids on all larger types of buildings, placing the general supervision in the hand of the Architect, and advocating the entire elimination of the General Contractor and the Construction Foreman from buildings of \$100,000, and up. Be it therefore

RESOLVED: That the MASTER BUILDERS ASSOCIATION, Portland,

"For this reason it has often been said that the supreme test of the relation is the right to control. So it may be stated in a general way that in every contract of employment, this element of right to control being present, the person employed has been held to be an employee or servant unless all the other circumstances necessarily required a different conclusion; and when this element of control was absent, the person has been held to be a contractor, and not an employee, unless a contrary conclusion was apparent from all the other circumstances."

"Applying these tests, there remains no doubt whatever that Shannon, at the time he was killed, was not an employee of Simmons, but his employment was an independent one. He owned the machine with which the work was done; he furnished all of the material; he did the work according to his own ideas and method, having the right to employ any necessary help; he could apparently begin when he pleased and chose his own hours of labor; he did not submit himself to the control of any one in respect to the details of the work; and he was to be compensated on a basis other than ordinary wages."

"The only circumstance tending to show that there was the relation of master and employee between the parties is the fact that Simmons told him that after completing the surfacing of the director's roof they would have no further use for the machine. There was no definite contract or agreement that Shannon was to do any particular amount of work, or surface any particular number of rooms. In the absence of such agreement, the fact that he was permitted to surface only one room with the machine is of no probative force, in the light of all the other circumstances."—Building Witness.

Oregon, place itself on record as firmly opposed to all such attempts to eliminate the General Contractor as direct and harmful attacks on an honorable calling, and an essential element of Building Construction, and subversive of the best interests of the OWNER, by causing unnecessary delays and materially increasing the cost, and further, be it

RESOLVED: That this resolution be spread on the record of this Association and that it be given as wide publicity as possible, in the interests of better and cheaper construction.

OREGON BUILDERS ELECT

The Oregon Association of Building and Construction has elected the following officers to serve for the ensuing year: Francis T. Murphy, president, illuminating engineer, Portland Electric Company; H. R. Kreitzer, vice-president, Columbia Brick Works; J. S. Seed, treasurer, general contractor; V. C. Stetson, secretary.

The executive committee includes the above officers and Frank Ransome, Charles Holbrook, F. S. Cook and J. J. Sayer. Organization officers will be opened at 511 Couch Bldg.

Publications

Building Economy, February issue, contains an interesting and a complete description of the Carver economy wall, with full preliminary details and data on cost, properties, and instructions for its erection. The Carver economy wall is a type of brick construction designed primarily for 1 and 2-story and attic houses, and for garages, filling stations, and other small buildings. The article published in Building Economy was prepared in advance by William Carver for presentation at the recent annual convention of the Common Brick Manufacturers' Association, held in Chicago. Copies of Building Economy, official publication of the association, can be obtained by writing to the Common Brick Manufacturing Association, 2121 Discount Bldg., Cleveland, Ohio.

Steel Square Pocket Book, by Dwight L. Stoddard, has been completely revised, and the new, third, edition, contains many new problems and methods of laying out different figures by using the steel square. Chapters are included on practical application of the square, laying out common rafters, hipped roof problems, uneven pitch roofs, towers, stair problems, siding and shingling, and calculating by the square. It is published by the W. P. C. Book Company, Incorporated, 239 West Thirty-ninth street, New York City.

The Department of Commerce has reprinted the articles on Construction and Construction Materials from the Commerce Yearbook for 1923. The reprint includes a 24-page article on construction and 19 pages devoted to lumber, cement, structural steel, burned clay materials, building stone, crushed stone, sand, and gravel. The text contains 25 concise tables of basic statistics, and 6 diagrams to show principal tendencies.

Joseph W. Hays and Associates, Michigan City, Indiana, have published the seventeenth edition of "How to Build up Furnace Efficiency." It is a treatise on fuel economy. The work has been enlarged from time to time with succeeding editions, and the present volume has reached the dimensions of a real book. The price of the book postpaid is \$3.50.

SELF-LOCKING TILE

A patent self-locking tile was recently put on the market in England and other countries and is meeting with success. The tiles are said to have exceptional strength and minimum porosity, and to be impervious to frost. Consequently they make light and durable roofs. An official test of resistance to frost was recently carried out, and the following is the report:

"The tiles were saturated in water and exposed to a temperature of 12 degrees to 15 degrees centigrade below zero for 16 hours. After this operation they were completely thawed. The glazed and the unglazed tiles presented no trace of alteration after having undergone the same operation 15 times."

The makers also manufacture a glass tile of the same shape for skylights; they are said to result in considerable economy both in material and labor.

The tiles are made in 16 colors, red, brown, and black glazed. The over all size is 11½ inches by 8½ inches. One thousand tiles are computed to cover 4½ squares. They are being manufactured and supplied by the Comptoir Tullier de Courtrai, at their works in Belgium.

Yosemite Cement Corporation To Proceed With Plant at Merced

Bringing one more great industry into the San Joaquin valley and promising a valuable contribution to valley prosperity by the conversion of a raw material into a manufactured commodity greatly in demand, the Yosemite Portland Cement Corporation announces its incorporation and the completion of its plans for the construction of a mill at Merced. The announcement comes from A. Emory Wishon of Fresno, president of the organization. Associated with him on the board of directors are W. A. Sutherland of Fresno, vice-president of the Pacific Southwest Trust & Savings Bank; John B. Olcese of Bakersfield, manager of the Bank of Italy; Murray Bourne, general counsel of the San Joaquin Light & Power Corporation, and Clyde Waterman, San Francisco capitalist.

The company is incorporated for \$1,500,000. Financing plans have been completed and actual construction work will shortly be undertaken. The company possesses the mill site at Merced and valuable limestone quarries in Mariposa county on the line of the Yosemite Valley Railway, with much material and machinery now installed. The preliminary work was done something more than a year ago by a group of promoters who were unable to complete their plans, and have now disposed of their interests to the new organization.

Transportation Lines

Their work consisted largely of construction of buildings and railroad switches at the proposed mill site, immediately northeast of the city of Merced, where there is a big clay deposit. The mill site is ideally situated, lying immediately adjacent to both the Santa Fe and Southern Pacific railways, and with the Yosemite Valley Railway crossing the property. The plant will start operations as a modern wet process plant with a capacity of 2600 barrels daily.

According to Professor Andrew Lawson, professor of geology and mineralogy at the University of California, who made an exhaustive survey of the quarries, the corporations now own sufficient raw materials for a plant of 2600 barrels daily capacity for 100 years. The stone is found in four deposits, covering a thousand acres. The

stone from all deposits is similar, analyses by Smith-Emory Co. of San Francisco, F. E. Twining of the Twining Laboratories of Fresno, and other chemists pronouncing it of such a character that it can be manufactured into a grade of cement comparable with the best produced in California. Professor Lawson's report says:

"No. 3 deposit alone is sufficient to justify the construction and operation of a mill with a 2000-barrel a day capacity at Merced, it having an assured tonnage, long life, short haul to railway, satisfactory rock, exceptionally good conditions for a long quarry face with no overburden, and a favorable dip of the strata for breaking."

Abundant Deposits

"Limestone and clay are the essential minerals for the manufacture of Portland cement," says Wishon in discussing the project. "These we have in abundance."

"Cement is a basic material, as necessary in the modern scheme of things as steel. Here in the San Joaquin valley it is being utilized in enormous quantities. It is in demand for building and road construction; for pipe for farm irrigation systems, and for numerous other uses. Yet with unlimited raw material for its making right at hand, we have always been dependent upon mills in other sections of the state."

"The Yosemite Portland Cement Corporation proposes to manufacture a high-grade cement, comparable in quality with the best. The advantageous location of its quarries and clay beds and the low cost of handling the materials assures our being able to compete with mills in any other section of the state. And the lesser freight rates to valley points gives this mill an advantage for San Joaquin deliveries. Demand for cement in the valley over the past several years has been far in excess of the capacity of our proposed mill. This should benefit."

Besides, there will be a tremendous market for cement in the carrying out of the gigantic irrigation programs now contemplated for the valley as well as in the construction plans of the power companies. We can see success for our mill, and the establishment of one more important and profitable industry in the valley."

SIMPLIFIED SIZE

Following the example set by the face brick and common brick industries, the Sand Lime Brick Association, at a convention held recently in Toronto, Canada, adopted recommendations to the effect that, beginning August 1, they would concentrate on one "recognized" size of sand lime brick. This size will supplant 45 varieties now made, and will be 8 inches long, 3½ inches wide and 2¼ inches thick.

The action was taken as a result of co-operation of the Division of Simplified Practice with the industry, the distributors and the consumer interest.

H. Ross Colwell of the Division, who represented the Department of Commerce at the Toronto meeting, reported that the sand lime brick industry was wholeheartedly in favor of the simplification project recognizing the necessity, in the interests of competition with other products, of a standard size which would be known to all architects, builders, contractors and engineers in construction work.

"LUMBER CITY" IS PROPOSED BY S. F. LUMBERMEN

Practically "squeezed" off the waterfront on the bay side in the southern end of San Francisco, wholesalers and retail lumbermen are planning a great union depot for lumber, with extensive wharfage in South San Francisco just over the county line.

The lumbermen are now negotiating for 134 acres of land owned in South City by the South San Francisco Land Company, and 192 acres under the ownership of the Shaw-Batcher Company. If the purchase deals go through as expected, construction work on wharves and warehouses will begin at once.

Negotiations are being carried on for the land through the San Francisco Retail Lumbermen's Association, which also lists in its membership many wholesale concerns. Direct negotiations are in the hands of a committee headed by Frank J. Harris of the Van Arsdale-Harris Lumber Company.

Building News Section

APARTMENTS

Sub-Figures Being Taken.
APARTMENTS Cost, \$50,000
OAKLAND, Alameda Co., Cal. Grand Ave. and Bellevue.
 Three-story and basement Class C apartment house (T & G roof; pressed brick and terra cotta exterior).

Owner—Withheld.
Architect—Clay N. Burrell, American Bank Bldg., Oakland.
Supervisor of Construction—M. Felix Sommarstrom, Syndicate Bldg., Oakland.

Contract Awarded.
APARTMENTS \$15,000 each
OAKLAND, Alameda Co., Cal. No. 507 and 515 Athol Ave.
 Two two-story 12-room apartments.
Owner—P. L. Mayhew and Dr. H. Jespersen, 473 Stow Ave., Oakland.
Architect—None.
Contractor—F. A. Taylor, Box 97, Fruitvale Ave., Oakland.

Contract Awarded. Cost, \$80,000
APARTMENTS
OAKLAND, Alameda Co., Cal. No. 3518-36 Foothill Blvd.
 Three-story 52-room brick apartment building.
Owner—Esther Smith, 1636 Franklin St., Oakland.
Architect—None.
Contractor—California Builders, 1636 Franklin St., Oakland.

Plans Being Revised—Ready for Sub-
missions in About a Week.
APARTMENTS Approx. \$1,000,000
SAN FRANCISCO, NE Cor. Sacramento and Mason Streets.
 Ten-story Class B reinforced concrete apartment house.
Owner—Alison-Sacramento Corp. (Mrs. M. V. McAdam, president).
Architect—Weeks & Day, 315 Montgomery St., San Francisco.
Contractor—Clinton Construction Co., 923 Folsom St., San Francisco.
 Building will be built in an "L" shape on property 137½ by 275 ft. to allow for outside frontage.

Marcus Marcussen, American Bank Bldg., part owner, will supervise construction.

To Be Done By Day's Work.
APARTMENTS Cost, \$120,000
SAN FRANCISCO, SW Cor. Octavia & Sacramento Sts.
 Six-story and basement, Class C (24) apartments.
Owner—D. J. Clancy, 275 Turk St., San Francisco.
Architect—Baummann & Jose, 251 Kearny St., S. F.

Contract Awarded.
APARTMENTS, ETC. Cost, \$90,000
OAKLAND, SW Cor. E 12th St & 3rd Ave.
 Three-story 48-room brick and concrete apartments and market.
Owner—Turlock Produce Co., E 12th St and 3rd Ave., Oakland.
Architect—W. J. Wilkinson, Howard Ave., Piedmont.
Contractor—Barrett & Hilp, 361 12th St., Oakland.

Completing Plans.
APARTMENTS Cost, \$150,000
SAN FRANCISCO, SW Sacramento and Octavia Sts.
 Six-story Class A brick apartments.
Owner—Stock & Jose.
Architect—Baummann & Jose, 251 Kearny St., San Francisco.

Completing Plans. Cost, \$30,000
APARTMENTS
SAN FRANCISCO, W Octavia St., bet. Sacramento and California.
 Three-story frame apartment house.
Owner—Stock & Jose.
Architect—Baummann & Jose, 251 Kearny St., San Francisco.

Figures to Be Taken Shortly.

(Continued on Page 34)

T. I. Butler, General Manager.
 T. I. Butler Co.,
 Dealers in Sand and gravel,
 San Francisco,
 Dear T. I.:

LAST SUNDAY was the birthday.
 OF GEORGE Washington.
 AND GEORGE'S folks.
 HAD CHERRY trees.
 IN THEIR back yard.
 AND GEORGE very foolishly.
 CUT DOWN one of them.
 BUT DOWN in Tulare.
 WHERE SANDY Pratt, President.
 OF THE Pratt Building Material Co.
 DOUGLAS 300—"easy to remember."
 WAS RAISED.
 SANDY'S FOLKS had no cherries.
 BUT FLENTY of fig trees.
 AND OTHER trees.
 THAT SHED millions of leaves.
 EACH AND every fall.
 AND SANDY felt like.
 CUTTING DOWN all of them.
 BUT SANDY'S father was different.
 FROM GEORGE'S father.
 SANDY'S FATHER didn't know.
 HOW TO take a joke.
 AND IF SANDY, now producer.
 OF "PRATT'S Amber" Mixed Sand.
 WHICH T. I. Butler Co.
 WILL BUNKER and sell.
 AT SEVENTH and Berry streets.
 HAD CUT down those trees.
 THEN SANDY (Clarence then).
 WOULD HAVE had to eat his meals.
 OFF OF the mantel.
 AND EVERYTHING.
 ANYWAY, SANDY is a producer.

OF CLEAN, sharp sand.
 AND HARD, crushed rock.
 AND DOES not have.
 TO SWEEP up leaves.
 FROM OLD fig trees.
 AND SANDY is happy.
 BECAUSE T. I. Butler.
 WILL SELL Pratt's sand.
 IN SAN Francisco.
 AND ALL would be well.
 IF SANDY.
 DIDN'T HAVE to serve.
 AS A jurymen all week.
 IN HONORABLE Judge Parker's court.
 THIS JUDGE from Mono County.
 IS "BATTING" for Judge Ward.
 "I THANK you."

When Sandy Pratt, producer of clean sand, crushed rock and washed gravel, was a boy in Tulare, Sandy and his "friends" used to "pick" fruit (when no one was looking).

Official Proposals

STATE OF CALIFORNIA CALIFORNIA HIGHWAY COMMISSION NOTICE TO CONTRACTORS

(Fresno County)

SEALED PROPOSALS will be received at the office of the California Highway Commission, 515 Forum Building, Sacramento, Cal., until 2 o'clock P. M. on March 23, 1925, at which time they will be publicly opened and read for construction, in accordance with the specifications therefor, to which special reference is made, of portions of State Highway, as follows:

Fresno County, between a point two miles north of Fresno and Herndon, (VI-Fre-4-C), about five and nine-tenths (5.9) miles in length, to be widened with Portland cement concrete shoulders.

Plans may be seen, and forms of proposal, bonds, contract and specifications may be obtained at the said office and they may be seen at the offices of the Division Engineers at Los Angeles and San Francisco, and at the office of the Division Engineer of the division in which the work is situated. The Division Engineer's offices are located at Willits, Redding, Sacramento, San Francisco, San Luis Obispo, Fresno, Los Angeles, San Bernardino and Bishop.

A representative from the Division office will be available to accompany prospective bidders for an inspection of the work herein contemplated, and Contractors are urged to investigate the location, character and quantity of work to be done, with a representative of the Commission. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the Division office.

No bid will be received unless it is made on a blank form furnished by the Commission. The special attention of prospective bidders is called to the "Notice to Contractors" annexed to the blank form of proposal, for full directions as to bidding, quantities of work to be done, etc.

The California Highway Commission reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

HARVEY M. TOY,
LOUIS EVERING,
N. T. EDWARDS,
California Highway Commission.

R. M. ARBON,
State Highway Engineer.
W. F. MIXON, Secretary.
Dated: February 24, 1925.

NOTICE TO CONTRACTORS

(Heating & Ventilating—Eureka High School District)

Notice is hereby given that the Board of Education of the Eureka High School District of Humboldt County, hereby calls for sealed proposals to be delivered to George B. Albee, Secretary of said Board, Eureka, California, until Wednesday, the 18th day of March, 1925 at 8 o'clock P. M. at which time said bids will be opened, for the heating and ventilating of the Eureka High School Building for the Eureka High School District, located on property described as "Property bounded on the West by 'J' Street, and on the North by Del Norte Street, and on the East by 'N' Street, and on the South by Trinity Street, in the City of Eureka, County of Humboldt, State of California."

These bids shall be presented in accordance with plans and specifications for said building on file in the office of George B. Albee, Secretary of the

A call for bids published in this section indicates that bids are desired from other than local bidders. Maximum competition is desired, and this is assured through BUILDING AND ENGINEERING NEWS which reaches every worth-while contractor and materialman in Central and Northern California who bids on public work.

Rates: 10 cents per line, per insertion.

All official calls for bids of the California State Highway Commission and Nevada State Highway Commission are published in this section.

Board of Education and in the office of the Architect, John J. Donovan, 1916 Broadway, Oakland, California.

Bids must be made on proposals obtained at the office of the Architect and be signed by the bidder and accompanied by a certified check certified to by some responsible bank or banker and made payable to the Eureka High School District, of the City of Eureka, Humboldt County, California, to be retained by said School District as agreed and liquidated damages should the party or parties to whom the contract should be awarded fail to enter into the contract after the award or to give bonds required for the faithful performance of the contract or any bond required by law. The amount of said check shall be for at least ten (10%) per cent of the amount of the bid. Each bidder shall execute the affidavit accompanying the proposals obtained from the Architect.

Bids will be opened by the Board of said District on Wednesday, the 18th day of March, 1925, at 8 o'clock P. M. in the office of the Board in said City of Eureka.

The Board reserves the right to reject any and all bids.

GEORGE B. ALBEE,
Secretary of the Board of Education.

NOTICE TO BIDDERS

M., March 3, 1925, in Room 14, City Hall, for a turbine pump with electric motor, direct connected, of 1200 R. P. M., 440 volts, 60 cycle, also one flange to connect the pump head to the present flange on the well for sealing off purposes; one eight inch gate valve and one eight inch check valve; one water level gauge and pipe to correctly indicate pumping level, also all pipe fittings and flanges necessary to connect the pump to the present system, completely installed.

Conditions are:
Diameter of well.....14 inches
Depth of well (a flowing well) 964 ft.
Pump level150 feet

QUANTITY SURVEYOR

Valuation Engineer
ARTHUR PRIDDLE
603 Mission Street, at Third St.
San Francisco, Calif.
Telephone Douglas 5-4-9-3
General Listing Bureau
Architect's Preliminary Estimates

Pumping head above pump base .8 feet
Total pumping head .83 feet
Gallons per minute, 1000 to 1200.

A certified check, made payable to Board of Public Utilities, in the sum of 10 per cent of the bid, accompany the bid. The Board reserves the right to reject any and all bids.

FRED C. STEINER,
President of the Board of Public Utilities.

GEORGE R. CADAN,
Secretary of the Board of Public Utilities.

NOTICE TO CONTRACTORS

(City of Reno—Street Paving)

Notice is hereby given that the City Council of the City of Reno, Nevada, invite and will receive sealed bids up to five (5) o'clock, P. M. of Monday, March 9th, 1925. Said bids to be filed with the City Clerk of the City of Reno, Nevada.

WORK TO BE DONE CONSISTS OF THE FOLLOWING ESTIMATED QUANTITIES:

Five hundred and seventy thousand (570,000) square feet, more or less, of three and one-half (3½) inch base and one and one-half (1½) inch surface Asphaltic Concrete Pavement.

Ten thousand (10,000) square feet of patching and replacing old asphaltic pavement.

Copies of the plans and specifications may be obtained from Harry Chism, City Engineer, upon the deposit of five (\$5) dollars; said money to be refunded if the specifications are returned within five days after the award of the contract.

Plans and plans may be seen and examined at the office of the City Engineer.

Each bid must be accompanied by a certified check payable to the City of Reno, Nevada, certified to by some responsible bank, for an amount not less than ten (10%) per cent of the aggregate of the bid.

For further information inquire at the office of the City Engineer.

The City Council reserves the right to reject any and all bids.

Dated at Reno, Nevada, February 16, 1925.

J. B. REESE,
City Clerk and Clerk of the City Council of the City of Reno, Nev.

NOTICE TO BIDDERS

(Stockton-Burbank School)

Notice is hereby given that separate bids for work and materials for the Luther Burbank School building, at Jefferson and Pilgrim streets, as per the plans and specifications prepared for the same by Charles Young, and on file in the office of the City Superintendent of Schools, corner of Lindsay and San Joaquin streets, Stockton, California, will be received up to Wednesday, March 11th, at 7:30 P. M., at said Superintendent's office.

The bids will be upon three different things:

1. Basement concrete floors.
2. Complete interior hardware.
3. Complete stairs for classrooms.

The School Board reserves the right to reject any or all bids. A certified check in the sum of at least ten per cent of the amount of the bid must accompany each bid.

Dated Wednesday, February 18th, 1925.

By order of the Board of Education at Stockton, California,
By ANSEL S. WILLIAMS,
Secretary.

Engineering News Section

BRIDGES

SANTA ROSA, Sonoma Co., Cal.—County Surveyor E. A. Peugh estimates cost of bridge repairs, due to recent storms, at \$50,000.

POMONA, Cal.—So. Pac. Ry. has agreed to its share of \$25,000 of \$91,000 viaduct over the S. P. and U. P. tracks on the Second St. extension. County will pay \$50,000. The Union Pac. will pay the balance. G. W. Corrigan, chief engr., S. P. Ry. F. C. Froehde, city engineer.

Steel Tank & Pipe Co., 1100 Fourth St., Berkeley—24-in. welded steel 3/16-in. \$432,810; 22-in. D. riveted steel 3/16-in. \$377,828; 22-in. welded steel 3/16-in. \$361,254; 24-in. D. riveted steel 3/16-in. \$399,782.

Pacific Coast Engineering Co., ft. of 14th St., Oakland—22-in. steel pipe \$452,570; 24-in. steel pipe \$473,697.

A. T. Windsor, 625 Market St., San Francisco—31,400 lin. ft. concrete pipe \$422 lin. ft.

J. Kristich, Knightsen, Calif.—31,400 ft. concrete pipe line \$72,574.

Schedule No. 3—Furnish pipe (only):
Steel Tank and Pipe Co., 1100 Fourth St., Berkeley, Cal.—22-in. welded steel 3/16-in. \$339,616; 22-in. D. riveted steel 3/16-in. \$374,088; 24-in. electric welded 3/16-in. \$361,504; 24-in. riveted steel 3/16-in. \$403,832; 22-in. electric welded 3/4-in. \$383,960; 22-in. riveted steel 3/4-in. \$409,552; 24-in. electric welded 3/4-in. \$416,416; 24-in. riveted steel 3/4-in. \$438,152.

Pacific Coast Engineering Co., ft. of 14th St., Oakland—24-in. steel pipe \$452,570; 22-in. steel pipe \$435,561; all points except Vallejo, lat-trench point \$453.5 ft.; 22-in. steel pipe \$328.5 ft. Vallejo, \$338.7 other points.

U. S. Cast Iron Pipe & Foundry Co., Menadoc Bldg., San Francisco—Cast iron pipe from \$6.1030 ft. to \$7.4250 ft. Shinn-Holtz Co., 2130 E-7th St., Los

Angeles, Calif.—24-in. L. welded steel pipe \$4.25 ft.

Schedule No. 4—Trench and backfill (only):

F. Meyers, 23rd St., Richmond—109-, 600 lin. ft. trench, \$52,890.

Schedule No. 5—Furn. valves (only):

(a) Waterworks Supply Co., Sharon Bldg., San Francisco; (b) Shinn-Holtz Co., 2130 E-7th St., Los Angeles; (c) L. F. Youldall, Matson Bldg., San Francisco; (d) Mark Hall Co., 2nd & Loma Sts., San Francisco.

4-in. A and V valves (a) \$120, (b) \$62.45, (c) \$120 (d) —; 3-in. A and V valves, (a) \$95, (b) \$42.40, (c) \$95, (d) —; 2-in. A and V valves, (a) \$80, (b) \$33, (c) \$80, (d) —; 1-in. air valves, (a) \$26, (b) \$21, (c) \$26, (d) —; 2-in. air valves, (a) \$30, (b) \$30.20, (c) \$30, (d) —; 3-in. air valves, (a) \$69, (b) \$55.90, (c) \$69, (d) —; 1-in. check valves, (a) \$2.25, (b) \$1.10, (c) \$2.25, (d) \$1.06; 2-in. check valves, (a) \$7.50, (b) \$3.28, (c) \$7.50, (d) \$3.12; 1-in. stop cocks, (a) \$5.30, (b) \$5, (c) —, (d) \$1.03; 2-in. stop cocks, (a) \$11.70 (b) \$2.60, (c) \$11.83, (d) \$2.36; 3-in. stop cocks, (a) \$27.50, (b) \$6.44, (c) —, (d) \$7.07; 4-in. stop cocks, (a) \$46.30, (b) \$17.40, (c) —, (d) \$19.86; 2-in. screw gates, (a) \$5.76, (b) 4.90, (c) —, (d) \$3.39; 3-in. screw gates, (a) \$10 (b) \$6.92, (c) —, (d) \$7.44; gate valves, (a) \$13.25, (b) \$11.86, (c) \$13.25, (d) \$15.85; 6-in. gate valves, (a) \$23, (b) \$18.32, (c) \$23, (d) \$25.8; 8-in. gate valves, (a) \$40, (b) \$29.73, (c) \$40, (d) \$33; 12-in. gate valves, (a) \$63.75, (b) \$67.16, (c) \$63.75, (d) \$65; 14-in. gate valves, (a) \$116.40, (b) \$91.07, (c) \$116.40, (d) \$106.90; 22-in. gate valves, (a) \$293.35, (b) \$239.35, (c) \$293.35, (d) \$350; 24-in. gate valves, (a) \$398.35, (b) \$385.63, (c) \$398.35, (d) \$350.

Schedule Nos. 7 & 8—(a) one 24-in. Venturi meter, (b) one 22-in. Venturi meter, (c) one 20-in. Venturi meter, (d) one 4-in. meter, (e) one 3-in. meter, (f) one 2-in. meter. (1) National Meter Co., 141 New Montgomery St., San Francisco; (2) Waterworks Supply Co., Sharon Bldg., San Francisco; (3) L. F. Youldall, Matson Bldg., San Francisco, (4) N. B. Livermore & Co., 85 2nd St., San Francisco, Cal.

(1) (2) (3) (4)
(a) 1448 \$135 \$135 \$1840
(b) 1110 1535 1535 1706
(c) 815 1035 1535 1375
(d) 180 180 189 no bid
(e) 87.50 79.50 103 no bid
(f) 22.50 58 no bid

All bids referred to A. Kempke, consulting engineer, Hobart Bldg., San Francisco. T. D. Kilkenny is city engineer of Vallejo.

Schedule No. 6—Furn. valves (only):

(a) Waterworks Supply Co., Sharon Bldg., San Francisco; (b) Shinn-Holtz Co., 2130 E-7th St., Los Angeles; (c) L. F. Youldall, Matson Bldg., San Francisco; (d) Mark Hall Co., 2nd & Loma Sts., San Francisco.

4-in. A and V valves (a) \$120, (b) \$62.45, (c) \$120 (d) —; 3-in. A and V valves, (a) \$95, (b) \$42.40, (c) \$95, (d) —; 2-in. A and V valves, (a) \$80, (b) \$33, (c) \$80, (d) —; 1-in. air valves, (a) \$26, (b) \$21, (c) \$26, (d) —; 2-in. air valves, (a) \$30, (b) \$30.20, (c) \$30, (d) —; 3-in. air valves, (a) \$69, (b) \$55.90, (c) \$69, (d) —; 1-in. check valves, (a) \$2.25, (b) \$1.10, (c) \$2.25, (d) \$1.06; 2-in. check valves, (a) \$7.50, (b) \$3.28, (c) \$7.50, (d) \$3.12; 1-in. stop cocks, (a) \$5.30, (b) \$5, (c) —, (d) \$1.03; 2-in. stop cocks, (a) \$11.70 (b) \$2.60, (c) \$11.83, (d) \$2.36; 3-in. stop cocks, (a) \$27.50, (b) \$6.44, (c) —, (d) \$7.07; 4-in. stop cocks, (a) \$46.30, (b) \$17.40, (c) —, (d) \$19.86; 2-in. screw gates, (a) \$5.76, (b) 4.90, (c) —, (d) \$3.39; 3-in. screw gates, (a) \$10 (b) \$6.92, (c) —, (d) \$7.44; gate valves, (a) \$13.25, (b) \$11.86, (c) \$13.25, (d) \$15.85; 6-in. gate valves, (a) \$23, (b) \$18.32, (c) \$23, (d) \$25.8; 8-in. gate valves, (a) \$40, (b) \$29.73, (c) \$40, (d) \$33; 12-in. gate valves, (a) \$63.75, (b) \$67.16, (c) \$63.75, (d) \$65; 14-in. gate valves, (a) \$116.40, (b) \$91.07, (c) \$116.40, (d) \$106.90; 22-in. gate valves, (a) \$293.35, (b) \$239.35, (c) \$293.35, (d) \$350; 24-in. gate valves, (a) \$398.35, (b) \$385.63, (c) \$398.35, (d) \$350.

Schedule Nos. 7 & 8—(a) one 24-in. Venturi meter, (b) one 22-in. Venturi meter, (c) one 20-in. Venturi meter, (d) one 4-in. meter, (e) one 3-in. meter, (f) one 2-in. meter. (1) National Meter Co., 141 New Montgomery St., San Francisco; (2) Waterworks Supply Co., Sharon Bldg., San Francisco; (3) L. F. Youldall, Matson Bldg., San Francisco, (4) N. B. Livermore & Co., 85 2nd St., San Francisco, Cal.

MISCELLANEOUS CONSTRUCTION

YREKA, Siskiyou Co., Cal.—Until March 14, 10 a. m., bids will be received by Leila E. Steele, clerk, Siskiyou Union High School District, to fur, and install one smoke stack, 50-ft. high 15-in. dia., made of 13 gauge galv. iron with one smoke stack cap and one vent roof plate. Additional information obtainable from clerk.

WATER WORKS

YUBA CITY, Sutter Co., Cal.—Until March 14, 12 noon, bids will be rec. by V. W. Cooley, clerk, Yuba City High School District, to install sprinkler system in school grounds. Cert. check 10% payable to clerk required.

SANTA ROSA, Sonoma Co., Cal.—Until March 3, 5 P. M., bids will be rec. by Geo. R. Cadan, Sec'y., Board of Public Utilities, City of Santa Rosa, to fur. one turbine pump with electric motor, direct connected, of 1200 R.P.M., 440 volts, 60 cycle, also one flange to connect pump head to present flange on well for sealing off purposes; one 8-in. gate valve and one 8-in. check valve; one level gauge and pipe to correctly indicate pumping level; also all pipe and fittings and flanges to connect pump to present system. See call for bids under official proposal section in this issue.

SAN RAFAEL, Marin Co., Cal.—Election will be held April 18 in Marin Municipal Water District to vote bonds of \$1,500,000 to finance district improvements and enlargements. Funds will be expended as follows:

Pipe line to del. approx. 10,000,000 gal. of water per day from Alpine Dam to Phoenix Gate House, \$500,488.

12-in. cast iron pipe line in 5th Ave., from Forbes Hill Reservoir to Grand Ave., \$75,478.

12-in. cast iron pipe line from Ross reservoir to Bichins, \$19,373.

10-in. cast iron pipe line in Irwin St., San Rafael, from Fifth Ave. to six inch San Quentin main, \$17,597.

8-in. cast iron pipe line from end of ten inch main to Bay Shore Acres, \$15,000.

12-in. cast iron line on Fish Grade from flow line at Lake Lagunitas to Phoenix Gate House, \$15,000.

14-in. cast iron pipe line from concrete pipe line to Jory Gate to proposed San Anselmo reservoir, \$82,944.

8-in. steel line from North Fork Laguna Creek to Belvedere Dam, \$28,943.

2,000,000 gal. reservoir bet. Fairfax and San Anselmo, including pipe with land with pipes to and from reservoir, \$83,272.

2,000,000 gal. reservoir at Sausalito including land with pipes to and from reservoir, \$89,272.

1,000,000 gal. reservoir at Fairfax complete, \$44,635.

1,500,000 gal. reservoir at Tiburon including land with pipes to and from reservoir, \$66,954.

1,000,000 gal. reservoir at Bay Shore Acres or vicinity including land and pipes to and from reservoir, \$44,636.

200,000 gal. redwood tank, Cushing system, Mill Valley, \$7,187.

200,000 gal. redwood tank, Summit avenue, Mill Valley, \$7,187.

Contract to be Awarded.
THEATRE, ETC. Cost, \$100,000
BERKELEY, Alameda Co., Cal., Bancroft W. of Telegraph Ave.
Steel and reinforced concrete theatre and store building.
Owner—Frank Atkins.

Architect—James T. Nabrett, 910 Macdonald Ave., Richmond.

Contract is shortly to be awarded to the low bidder, F. W. Maurice, 1262 E 25th St., Oakland.

Contract for steel has been awarded to the Herrick Iron Works, 18th and Campbell Sts., Oakland.

LOS ANGELES, Los Angeles Co., Cal.—Architect G. Albert Lansburgh, 700 Hillstreet Bldg., Los Angeles, and San Francisco, is completing working plans for a reinforced concrete 6-story Class A theatre, store and loft building on the south side of Hollywood Blvd., between Highland and Orchid Aves., for C. E. Toberman. The theatre and balcony will seat 1600 people, front section

tion will be six-story and will have stores and lofts; reinforced concrete and steel frame, 124x175 feet, terra cotta facing, brick filler walls, steam heating system, electric elevators, tile and marble work, sprinkler system, ornamental iron, plate glass, foyer, staff and ornamental plaster work. Cost, \$1,200,000. Bids will be taken in about 30 days.

WHARVES & DOCKS

SAN FRANCISCO—Until March 6, 11 a. m., bids will be rec. by U. S. Engineer Office, 85 2nd St., under Order No. 5846, to fur. and del. in water at San Francisco or Sacramento or at S. F. cars railroad, approx. 1,100 lin. ft. Douglas fir piling, contemplated lengths as follows: 340 lengths approx. 35-ft.; 85 lengths 45-ft. and 25 lengths 60-ft. Further information obtainable from above office.

MISCELLANEOUS BUILDING CONSTRUCTION

VANCOUVER, B. C.—Harbor Board plans to expend \$1,820,000 in the following improvements:

Grain jetty and berths at No. 2 elevator, \$350,000.

Million-bushel annex to No. 1 elevator, \$300,000.

Terminal railway development, \$150,000.

New fishermen's wharf, \$150,000.

Cold storage plant at fishermen's wharf, \$90,000.

Alterations to Second Narrows bridge, \$80,000.

Plans Complete.
BOILER & PUMP HOUSE, Cost \$21,000
OAKLAND, West Oakland Yards.
One-story boiler and pump house.
Owner—Southern Pacific Co., Oakland Mole, Oakland.

KOEHRING

DANDIE Light Mixer

Dandie with steel disc wheels and solid rubber tires; power charging skip, water tank and gasoline engine.

Dandie with steel trucks; power charging skip, water tank and gasoline engine.

EQUIP it to your special needs. Rubber tires to save the time waste of between-job hauls, and to expand your working territory. *Light duty hoist. Low charging platform or power charging skip. Automatic water-measuring tank.*

Most important, you can be sure of full capacity—utmost reliability—and long service life—because this mixer is Koehring built, engineered and constructed to out work, out last anything in the light mixer field. Price? Not the lowest price

—no—but the most remarkable value of all light mixers—and still within the range of light mixer prices.

CAPACITIES

4 and 7 cu. ft. mixed concrete, steam or gasoline power. May be equipped with power charging skip or low charging platform with hopper, light duty hoist, automatic water measuring tank. Mixes mortar as well as concrete.

BRICK MEN PLAN TO AID HOME FINANCING

A plan to assist home owners in the financing of brick residences was presented to the Chicago convention of the Common Brick Manufacturers' Association of America February 11 by John P. Cahoon of Salt Lake City. The plan calls for the making of arrangements with reputable financial institutions so that first mortgages covering up to 60 per cent of the value of brick residences may be issued to prospective buyers.

The owner will be required to furnish only 25 per cent of the valuation; the remaining 15 per cent of the money is to be furnished on second mortgage by the financial house through the agency of local brick manufacturers' organizations, according to the proposal. It is estimated by the brick manufacturers that if such second mortgages can be floated at 4 or 5 per cent interest, a tremendous increase in brick house construction will result.

Commenting on the plan the American Contractor states:

"While the proposal is still in a nebulous form, it marks an important step forward in the thought of building material producers. The convention not only ratified the proposal, but invited President William Schlake to appoint a committee of three to form the contact with the necessary financial institutions and draw up a working plan suitable for handling by local brick men."

Construction Cost Favors The Early Builder Says Dow Service

Construction cost favors the early builder this year, writes Allen E. Beals in Dow Service "Daily Building Reports."

First, because there is a shift taking place in the market for the basic building materials; second, because there is a tendency for labor to try to obtain higher wage scales; and, third, because the reaction in housing construction is only a temporary one.

The cause of the shift in the market for basic materials is due, probably, more than to any other cause, to the change in dominant character of construction work, as compared with other recent years.

This shift was in no wise expected when building material manufacturers laid in their reserve for this spring's requirements. The costs of manufacture were such as to make necessary heavy production. No one anticipated that the demand for these materials would be lessened so abruptly. No one expected that the winter would be so rigorous and retard the even flow of materials to active building jobs.

But when the plans filed in the building departments of the five boroughs of New York drop from 4,949 in the first month of 1924 to 1,724 in the first month of 1925, yet the cost of these 1,723 building projects is only about \$4,000,000 below what 4,949 buildings cost last year; there is evidence aplenty that it is due to a shift in the type of dominant building.

It must not be overlooked that the plans filed for the month of January in New York do not affect so early the demand for basic building materials. The effect of this slump in building will be felt later in the year.

The influence that building progress has upon building material prices at this time is derived from buildings that were projected last autumn, but which are just now taking material deliveries.

Bronx, for instance, shows that with 111 fewer building operations she will spend for January projects \$5,729,000 more than she spent for January, 1921, projects. Manhattan with seven fewer projects will spend \$13,264,000 more. Brooklyn, on the other hand, with 1391 fewer building projects in January, 1925, than in the same month last year will spend \$15,098,000 less, and Queens, with 754 projects less than in January

a year ago, will spend \$7,444,000 less. Richmond, with half the number of projects recorded a year ago last month, will spend just about half what it spent last year.

Here, in the first month of the year, is a loss of \$26,800,000 in building investments, which would have represented building material and equipment purchase later in the year.

The second phase of the factors affecting construction costs after this year, namely, that of labor, is a matter of conference table negotiation, a privilege that that law does not grant to building material manufacturers or dealers. The building material manufacturer and the building speculator are compelled to lay out vast sums of money and take a chance on finding a market that will return them a profit.

The third phase, however, concerns housing. It involves that type of building speculation that, except in a great national emergency, like that of the late country-wide housing shortage, has never had the serious attention of building investors on the scale that recent experiments have involved.

Recent semi-philanthropic investment has been watched by the professional speculative builder and the time is near when the practical side of the experiment can be studied. Trained in habitation erection, he sees that there must come a time, and that soon, when the high priced apartment must reach a saturation point in New York and be figures that in another year the modern method of providing healthy housing accommodations for those who can pay only \$8 to \$10 a month a room will engage the attention of those who today are rushing through to completion high class apartments projected last year, and he will desire to get into the market first. The \$8-to-\$10-a-room multi-family operation will be the dominant forerunner of the forthcoming subway extensions.

Here is where the early builder will most likely gain his advantage. He will enter the market when it is most receptive. If, after the spring renting season, the speculator again enters the market, he will find the commercial, mercantile, institutional and recreational building operators have been buying materials before him and he will be sure to find conditions as to price and supply far different than they are now.

PLATE GLASS OUTPUT TO BREAK ALL RECORDS IN 1925

Plate glass manufacturing in the United States, which broke all records in 1924, is expected to hang up a new high score in 1925, according to P. A. Hughes, secretary of the Plate Glass Manufacturers of America.

Production in 1924 was 91,554,474 square feet. This was 2,485,033 square feet more than was produced in 1923, and is a continuation of the progress made in the last four years. The total

production in 1921, for instance, was 53,578,682 square feet.

Says Hughes: "The demand for plate glass is good and the outlook for the next six months is excellent. It is estimated that the production for 1925 will be considerably larger than in 1924. A substantial increase will be brought about when the new factories that are nearing completion get into operation."

"While there is every indication that the demand will increase, there will be plenty of glass as manufacturers have made provisions to take care of requirements and to give good service."

THE OBSERVER

WHAT HE HEARS AND SEES ON HIS ROUNDS

Complaints charging five western lumber companies with selling yellow or soft pine, as white pine, have been made public by the federal trade commission at Washington. The companies name the Couer d'Alene Mill Company, Couer d'Alene, Idaho; Grand Ronde Lumber Company, Perry, Ore.; McGoldrick Lumber Company, Spokane, Wash.; Deer Park Lumber Company, Deer Park, Wash., and the Shevlin Hixon Company, Bend, Ore. The commission charged the companies with selling yellow pine as "Eastern white pine," leading purchasers to believe their product was white pine. The commission held that such practice is an unfair method of competition.

E. L. Bruner, architect, has recently been made a member of the firm of Hamm & Grant, Inc., architects and engineers, engaged in the design and erection of commercial and industrial buildings throughout southern California. Mr. Bruner was formerly structural designer with the California State Harbor Commission, and more recently chief structural designer for the Spreckels Sugar Co. at San Francisco.

"Celite," the trade name for a diatomaceous earth which forms the white chalk hills about Lompoc, is to be used in the surfacing of the Lompoc-Harris Station road in Santa Barbara county. The material will be mixed with the asphalt surface to eliminate air spaces, if present plans are carried out. The idea has been endorsed by County Surveyor Owen O'Neill.

Promising that every effort will be made to prevent strikes and lockouts and that no demands for increase in wages would be made, Nevada organized labor is on record as opposed to any movement whatsoever that would tend to hinder in any way, Reno's plans for the 1926 highways exposition.

Representative Mae E. Nolan of California has introduced a bill at Washington seeking authorization to sell the sub-treasury building and site in San Francisco and with the proceeds purchase a new site and erect a new federal building.

Pacific Gas & Electric Co. plans to increase the bonded indebtedness of the corporation from \$160,000,000 to \$250,000,000 as a preliminary move in a new bond issue to finance development work.

E. H. Raymond, vice-president of Crane Co., internationally known plumbing concern, was found dead in his berth of a Texas and Pacific train when it arrived in New Orleans, Feb. 24.

The Senate has passed the Heflin bill authorizing the Secretary of War to allot the states all surplus army trucks, tractors and other machinery for use in state road building.

The Western Retail Lumbermen's Association will hold their 1926 meeting in Portland, Ore.

The Goodyear Lumber Company at Greenwood, Calif., has incorporated for \$1,500,000.

W. L. Arnold, brother of Elton J. Arnold, who surveyed and reported on San Francisco's transportation facilities in 1915, was recently in San Francisco conferring with City Engineer M. M. O'Shaughnessy on traffic problems. The Chicago city government is at present campaigning for the purchase of the entire surface street railway system as a municipal project. It is expected that a bond issue approximating \$175,000,000 will be floated to make the purchase. Poor transportation service has forced the issue, Arnold says.

Building permits for structures costing \$563,933 were issued in February in the four peninsula cities of Burlingame, San Mateo, Palo Alto and Redwood City. This is a gain of \$34,970 over February of 1924. Burlingame showed the greatest gain, issuing permits for \$182,815 construction the past month, as against \$124,141 for February, 1924. Palo Alto led the past month with a total of \$196,786 in buildings. Redwood City's total was \$107,051, and San Mateo's \$74,800.

Seven Los Angeles men are among the 200 engineers named as representatives throughout the country of the Engineering Foundation, with headquarters in New York City. They are: James E. Barker, O. H. Ensign, H. Hawgood, Louis C. Hill, W. T. Knowlton, Ralph J. Reed, Harry V. Veitch. Furtherance of research in science and engineering and advancement of the engineering profession are the objects of the Engineering Foundation.

David T. Riffle of Pittsburgh was elected president of the National Association of Builders' Exchanges which recently closed its convention in Los Angeles. Other officers elected were: Robert L. Reisinger of Milwaukee, first vice-president; W. H. George of San Francisco, second vice-president, and Max Bauman of New York City, treasurer. Earl F. Stokes of Baltimore, was re-appointed executive secretary.

The Save the Redwoods League has raised \$750,000 in its campaign, and a portion of this will be devoted to a policy of reforestation of the Dyerville flats and Bull Creek flat. These groves are near the limit of the Humboldt State Redwood Park, and an arrangement has been made with the Pacific Lumber Company for reforestation under the supervision of Major David T. Mason.

Senator Edgar S. Hurley of Alameda is author of a plan which proposed a \$50,000,000 bond issue to finance state highway construction in place of the proposed gasoline tax increase and other similar measures.

James Anton, city building inspector of Fresno, was slightly injured in an automobile accident on the state highway, twelve miles south of Bakersfield, Feb. 22.

The bricklayers' union of Knoxville, Tenn., recently voted to reduce their wage rate from \$1.40 to \$1.25 per hour in order to stimulate building in that city.

ALONG THE LINE

Bay Cities Bridge Corporation, A. O. Stewart, president, has filed application with the San Francisco Supervisors seeking a franchise to construct and operate a toll bridge over San Francisco Bay from a point beginning at Sixteenth and Third streets (Kentucky street), San Francisco, and ending in Cypress street, in the city of Alameda. The proposed structure would be 27,750 feet in length with a roadway 38 feet wide. The application will come up for consideration April 6.

Unanimous endorsement of assembly bills 975 and 976, which change the status of county surveyors to that of engineer and provide for promulgation of a budget by the engineer for county highway construction and upkeep has been voted by the Fresno Chapter, American Association of Engineers.

San Francisco Civil Service Commission announces an examination for the position of building inspectors. The examination will be held March 21. Application must be filed with the commission, Room 151 City Hall, before March 18.

Offices of Southern California Chapter, Associated General Contractors, have been moved from the Douglas Bldg. to suite 818, Wright & Callender Bldg., Los Angeles.

E. Marcus Pretica and Frederick J. Peters, architects of Seattle, Wash., announce the formation of a partnership. Offices will be maintained in the Pantages Bldg., Seattle.

Thomas Upton, 53, general contractor of Modesto, died suddenly in that city, Feb. 25. Upton was stricken with a heart attack and died before medical aid could be obtained.

Wm. F. Breuer has been re-elected craft manager of the Builders' Exchange of Alameda County. Breuer was formerly secretary-manager of the Master Plasters' Exchange.

Alexander Peers, pioneer lumber man of San Mateo county and said to have been the oldest member of the Masonic order in California, died in Mayfield, March 2.

R. E. Tilden, consulting civil, irrigation and hydraulic engineer, has opened offices at 1402 Hobart Building, San Francisco.

Chas. Edgar Greenfield, veteran contractor of Santa Cruz, died in that city, Feb. 23, the result of an apoplectic stroke suffered last September.

Marshall K. White, city engineer of San Mateo, has resigned. Temporarily, the position will be filled by O. F. Weissgerber, city manager.

Stockton sets April 21 as date to vote bonds of \$3,000,000 to finance deep water project.

1924 Construction is Reviewed—Financial Chief Predicts Good 1925

(By S. J. T. Straus, Vice-President S. W. Straus & Co.)

The building industry has once more confounded the prophets of gloom. A year ago, after two years of record-breaking activity, there were a number of amateur critics have predicted that the collapse of the industry was at hand. To those who appreciated the extent and urgency of the shortage which had been accumulated in eight years of serious underbuilding, the baselessness of this pessimistic view was apparent. But our predictions made a year ago—that 1924 would be another capacity year for the construction industry and that building costs could safely be expected to continue without major fluctuations throughout the year—were received with not a little skepticism in many quarters. The soundness of that forecast is now abundantly proven.

Both building permits issued and contracts awarded show that a new record has been hung up in the volume of building activity. Total building operations in the United States for the year 1924 approximate \$5,750,000,000. In 1923 the volume was \$5,500,000,000, but aggregate operations last year, based on the amount of plans filed and building permits issued in the 350 leading centers, exceed the 1923 total by about 4 per cent. In 1923 the gain over the previous year was 24 per cent. In every month of the past year except April and November the value of new buildings permitted was larger than in the corresponding month of 1923. The moderate decline in the issuance of building permits during the early summer was not reflected in any corresponding decline in construction activity and was followed by a substantial recovery in September and October.

Nor did the year 1924 witness any substantial decline in building costs. In fact, both building material prices and building wages showed a smaller range of variation than in any year since the war. During the summer, moderate declines in a number of building materials were reported, but in the last three or four months a movement in the opposite direction has wiped out most of these declines. The market for practically all the important building materials has recently been showing real strength and the outlook during at least the early part of 1925 is for a further moderate advance.

Throughout the early part of the year, building wages continued to advance, though the peak was probably reached in May and very moderate declines have since occurred in certain sections. Bonuses have now practically disappeared and some increase in the efficiency of labor has been reported by contractors. Standard indexes of construction cost, which take into consideration these month to month fluctuations in building prices and in building wages indicate that building costs averaged about 3 per cent lower than during 1923.

The outlook for 1925 is that this year will be another year of great building activity. This forecast for the building industry rests upon the assumption that the coming year is to be a period of good business and of increasing prosperity. It assumes that the stimulus of easy money, the rise in farm prices and the return of agricultural prosperity, the measurable progress

made towards the stabilization of European economic and political conditions, the consequent reappearance of an export demand for the product of a number of our languishing industries, the new orientation of business sentiment due in part to the above factors and in part to the outcome of the elections, will maintain and strengthen the present tendencies to expanding production and trade, increasing employment, rising prices, widening margins of profit, and increasing willingness to undertake long-term commitments. If the assumption is well-founded, as all the business forecasters would admit, at least for the first half of 1925, then a high degree of building activity is assured.

Over a billion dollars' worth of construction begun or arranged for in 1924 remains to be completed in 1925. Again, in spite of the boom activity of the last two or three years, the building shortage has not yet been fully made up. It is true, of course, that for certain types of buildings in certain cities or in some sections of certain cities, supply has already caught up with demand. But taking the country as a whole, there still exists an unsatisfied demand for certain types of building facilities. While the need for such facilities is not as urgent as that which has already been satisfied, yet it will appear in the market as effective demand as soon as business conditions and business sentiment are favorable.

There will doubtless be changes in the relative activity in connection with different classes of projects. Industrial building, which has been steadily declining since 1920, will almost certainly increase both in absolute and in relative volume under the stimulus of rising prosperity, and in view of the tendency towards the relocation of industrial plants for which such factors as the Pittsburgh plus decision, the revision of railroad rates, and the development of hydro-electric power will be responsible.

In some sections, commercial requirements will assure a large volume of building. Public works and public utilities is another classification which may also be expected to show a substantial increase over 1924. The expansion program in the public utility field will continue as in the past two years and there is a vast volume of contemplated improvements of a public or semi-public sort which will go forward once confidence in underlying conditions and general optimism as to the future become more widespread.

But residential construction will still continue to account for by far the largest single portion of the demand. Special impetus should come from those sections which have been particularly affected by the notable improvement in the position of the farmer. In those sections, an enormous volume of deferred repairs, replacements and extensions must exist which will sooner or later emerge in the annual increment of building demand. But in other places, even in those cities where activity has been great and where temporary surpluses may have led to slight declines in rents for certain facilities in certain sections, building will continue in large volume. The ut-

most caution is necessary, of course, to avoid over-building, but the importance of such declines in rents as have occurred or such vacancy percentages as have sometimes been reported has been unduly exaggerated both by owners of buildings and by the public.

The tremendous volume of construction during the past year has been made possible by the increasing public recognition of the merits of the real estate mortgage bond. In no previous year has the volume of real estate mortgage bonds offered for sale reached the magnitude attained in 1924. At no other time has this type of security stood so high in the esteem of the investing public. That esteem, of course, is based on the exceptional combination of those elements of an ideal investment which it offers, namely, (1) maximum safety when issued by strong, experienced houses and properly safeguarded; (2) attractive income as compared with other investments of comparable security; and (3) a reasonable degree of marketability which is now being provided by some of the leading houses.

Under the pressure of the tremendous flow of funds into the money and investment markets, the ruling rate on high-grade first mortgage real estate bonds has recently fallen from 6½% to 6%, but the decline in this field has scarcely kept pace with the declining yields of other high-grade securities. The advantages of the security not only continue to appeal to an ever-widening circle of investors, but they are also compelling an increasing number of general market bond houses, who have had no previous experience in the field, to participate in the underwriting of real estate bond issues. This entrance into the field is a wonderful testimony to the merits of the real estate bond, and, if due caution is used and experience gradually gained, should increase the popularity of this type of security and redound to the general advantage of the country.

The distribution of real estate mortgage bonds to the public has unlocked great reservoirs of capital which could not otherwise have been made available for building purposes. Under the old-fashioned system of flat mortgage lending, the amount of capital available for the larger construction projects was necessarily limited by the lending capacity of a few large institutions, such as insurance companies, banks, etc. The real estate bond issue, however, has removed this limitation and made it possible to assemble capital from investors large and small all over the country to finance meritorious projects. The man with a few thousand dollars, even with a few hundred dollars invested in real estate bonds is helping in the upbuilding of our nation—just as well as the larger lenders of money.

The year 1924 marked the highest development ever known in the real estate mortgage bond field and a larger proportion of real estate financing than ever before has been carried out under this method. The indications are that during the coming year this wonderful record will be maintained. The real estate mortgage bond—as safeguarded and sponsored by the more experienced and stronger real

estate bond houses—furnishes a flexible and convenient medium for securing the necessary financing to bring this needed construction to completion as well as furnishing the individual with investments of double worth and merit.

TRADE NOTES

The Santa Barbara Supply Company has purchased the brick yards of the Carpinteria Clay Products Company for approximately \$50,000. The yards were operated by L. L. Brentner. The purchasing company was recently organized by Santa Barbara builders with a capital stock of \$150,000 and its first step was to purchase the Handscomb plant at Salpiedes street and the S. P. right-of-way in Santa Barbara. The Carpinteria Clay Products plant is located near the Ventura county line and the beach and is one of the few plants on the coast which produces yellow brick.

Graft-Windlund-Graft, Inc., 1761 Franklin St., Oakland, sole distributors and representatives on the Pacific Coast for Asbestile, Asbestos Cement, Shingles and Sheets, announce that Malott & Peterson, roofing contractors, 2412 Harrison street, San Francisco, have taken over the agency rights for the products in the San Francisco district. Simultaneously the Windlund Company has accepted the agency for Alameda County. Peter N. Winlund, long identified with the building business in Alameda County, is in charge and will direct roofing construction for this concern.

The Merced plant of the California Pottery Company faces a prosperous year. It was disclosed following a meeting of sixteen executives and members of the sales force in Merced recently. The meeting was presided over by Frank A. Costello, president of the company. The Merced pottery plant is reported to be working thirty-five men and is shipping thirty cars of clay products each month, a car a day. Products manufactured at the Merced plant include face and paving brick, common brick and agricultural drain tile.

Solon & Schimmel Tile Co., now located at Fourth and Carrie Sts., San Jose, is having a new plant erected on the Monterey road near McClellan Ave., San Jose. New quarters and more modern equipment necessitated the move to care for increased business, according to officials of the company.

Cornwall Construction Co. of Santa Barbara has been incorporated with a capitalization of \$70,000. Directors are: Jas. T. Cornwall, George E. Rue and A. Doko. The company will do a general business in construction and grading work.

Argus Products Company of Salem, Ore., has been incorporated with the following directors: H. J. Whitmore, Chas. R. Spackman Jr., and Robt. Rankin. Company is capitalized at \$100,000 and will deal in brick, tile, sand, clay and cement.

The Muresque Tiles, Inc., has leased quarters at 1901 Twenty-second Ave., Oakland, and will engage in the manufacture of wall tile, clay products and numerous other articles. Officers of the company are: Wm. P. Muir, president; Chas. Orpin, secretary and John T. Lane, financial agent.

Real Estate Boards Seek Tax and Building Cost Reductions

A program of activities for the year 1925 concerned with legislative and tax measures affecting real estate, housing advancement, city planning and zoning, the compilation of facts in regard to real estate and the development of professional standards of conduct in the business of real estate has just been adopted by the national association of real estate boards. The program was approved by the delegate body of the association's member boards at its annual meeting recently concluded at Dallas, Texas.

The development of a national clearing house on state legislation affecting real estate will be the purpose of a newly formed committee on state legislation and taxation, of which C. C. Hieatt of Louisville, is chairman, and L. T. Palmer, Middletown, O., is vice chairman. The association will study state taxation to the end of formulating a complete plan of such taxation as would distribute the tax burden as nearly as possible equally. It will also study plans for control of public expenditures, such as the present Indiana plan, which puts a veto on all state and local levies in the hands of a body of state tax commissioners. It will co-operate with the American Title Association and the American Bar Association in the promotion of uniform legislation with respect to land laws in the various states.

Henry G. Zander of Chicago is chairman of a separate committee whose work it will be to study proposed federal measures affecting real estate, particularly all tax measures introduced into congress.

Better Small Homes

Reducing the cost of constructing small dwellings particularly through promoting better organization between designer, builder, and seller, will be another principal objective of the association for the year. Henry R. Brigham, of Boston, is chairman of the committee on housing, which will undertake this work. Through this committee the association will make a national study of rent control throughout the United States and its results, and will co-operate with the Architects' Small House Service Bureau and other organizations for the promotion of better architects for American homes.

Results of city planning and zoning legislation over the United States will be studied under a committee of which Judson Bradway of Detroit is chairman.

The City Sash & Door Company will occupy the ground floor of a twelve-story structure to be erected in Mission street near Fourteenth. It was previously reported that the quarters would be occupied by the San Francisco Sash & Door Company.

The Standard Fence Co. with offices in San Francisco, Oakland and Los Angeles, has issued an illustrated letter to the trade telling of the advantages of specifying and the several styles of Cyclone Fencing.

National Cast Iron Pipe Co. has opened a Los Angeles office at 903 Hellman Bank Bldg., Seventh and Spring Sts., according to an announcement of Ben L. Hendershot, Pacific Coast sales manager.

Offices of the Phoenix Sidewalk Light Co., formerly located in the Monadnock Bldg., have been moved to the factory at 317-319 Harriet street, San Francisco.

Continued revision and building up of the association's code of business ethics has been put into the hands of a committee of eighteen who will form practically a national commission on real estate ethical standards. A. S. Adams of Atlanta is chairman of the committee. The committee will assist member boards in setting up adequate machinery for the enforcement of the code.

Scientific Appraising

Active work for the enlargement of the usefulness of scientific real estate appraisals will be carried on by a committee of which Val J. Rothschild of St. Paul is chairman. The committee on appraisals will act as an advisory committee to the federal real estate board at Washington.

Work to secure the enactment of measures of public protection against unscrupulous or incompetent real estate dealers in the twenty-seven states which as yet require no license for the conduct of a real estate business, is in the hands of a committee to be headed by E. W. Bratton of Nashville, Tennessee.

Real Estate Advertising

Preparation of a special book on real estate advertising and collection of a national library of effective real estate advertising both by individual firms and by real estate boards will be carried on by the association through its committee on advertising. Mrs. W. H. Wright of Chicago and Oak Park, Ill., is chairman of this committee.

The large national program of the association for technical education in real estate is to be carried on under a committee of which Paul E. Stark of Madison, Wis., is chairman. Recommendations with regard to multiple listing of real estate as based on experience of member boards will be formulated through a committee of which J. Soule Waterfield of Chicago is chairman. Consolidation of value of the association's use of the word Realtor, the exclusive right to which has been confined by three court decisions within the past year, will be in charge of a committee headed by C. N. Chadbourn of Minneapolis, who coined the term.

Licensing of Own Your Home Expositions will be in charge of a committee headed by Bartholomew O'Toole of Chicago. Efforts of the national association to secure better rates for home-seekers from railroads will be continued, with H. H. Richardson of Jacksonville, Florida, chairman of the committee in charge.

Edward Casey, court commissioner at San Andreas, has sold the Asbestos and Reynolds Ferry placer mine near Melones, containing 160 acres, under foreclosure of the California Asbestos Company against Lillian M. and J. A. Voorhees. The property was purchased by Newton Todd of Long Beach for \$6973.50.

Daley Bros., of Burlingame, capitalized at \$50,000, have incorporated and will engage in a general contracting business. Directors are: John P. Daley, William Henning and G. Morris Daley, all of Burlingame.

Frank J. Klimm, San Francisco master plumber, has resumed the agency for the John L. Douglas line of pottery. The line was carried by J. H. Mulrheine for several months.

Lingo & Olsen have opened a new planing mill at 442 Fifteenth street, Merced.

CALIFORNIA PATENTS

(Special Correspondence)

The following information is compiled by Munn & Co., New York, patent and trade mark attorneys.

William A. Holquist, Los Angeles. FLAME ARRESTER FOR GAS HEATERS. This has a protecting member of strong framework with a finemesh screen which can be easily moved to allow a cleaning of the stove, and again as easily attached.

John A. Wintroath, Los Angeles. DEEP-WELL TURBINE PUMP. The object of this invention is to prevent water from entering the casing and displacing oil therefrom, this is accomplished by subjecting the lower end of the oil column to a pressure considerably lower than that produced by the pump. Mr. Wintroath assigns his patent to Peerless Pump Company, of Los Angeles.

Dorzier Finley, Oakland. SEALING TAPE FOR ROOFS. This includes the provision of an improved means of uniting the overlapping edges of the roofing sheets, characterized by a lower cost, greater convenience in packing and applying, and a superior result both in affect and appearance. Mr. Finley assigns his patent to Paraffine Companies, Inc. of San Francisco.

James B. Morrow, Oakland. HEAT DEFLECTOR. This deflector is positioned immediately below the top of the heater, and deflects the heat outwardly, which is emitted through openings in the upper part of the stove. The heat thus deflected will warm the lower part of the room instead of passing directly to the ceiling.

Charles R. Jedlicka, Palo Alto. SANITARY TOILET-SEAT COVER. This is adapted to be utilized with fastening elements so it can be removably fastened to the toilet seat to completely cover it.

Garnet W. Coen, San Francisco. OIL HEATER. This provides a structure which will permit a maximum heat transfer to be obtained between the heating medium and the oil or liquid to be heated. This is a simplified form of heater as in his co-pending patent of March 30, 1921, Serial No. 457,008.

Anton Mazzanovich, Los Angeles. SUPPORT FOR WALL SETS. This greatly facilitates the work of handling stage scenery, particularly those upright frames that occupy vertical positions on the stage, and which represent walls of buildings or like structures.

Harold C. Bennet and Garner L. Knox, Los Angeles. TRAILER COUPLING. This relates to trailer couplings and is more particularly adapted to two wheeled trailers, the forward ends of which are supported by the towing vehicles.

Edward J. Wheeler, of Oakland. GRATE. This is an improvement for burning fuel of all kinds such as solid and gaseous fuels, and particularly combined gas and coal grates. It may be shaken by angular oscillation about a horizontal axis.

Alfred C. Stewart, of Los Angeles. FUEL-SUPPLY FOR INTERNAL-COMBUSTION ENGINES. This provides maximum power capacity by admitting additional fuel as required for heavy loads in such a manner that it will be distributed to the full volume of air.

IRA Edward Smith, of Stockton. ELECTRIC SWITCH. This is a thermostatically or pressure operated switch to be used to control the generation of heat, steam or other pressure.

Myer E. Iseman and John K. Hougham, of Visalia. DISPLAY RACK. This comprises a compact and easily movable structure provided with shelves arranged to support and display the goods in convenient and attractive manner. They assign one-third of their patent to Marc Harold Iseman, of Visalia.

Carl E. Nagel, of Oakland. PUMP. This is that type of pump which depends upon the viscosity of an oil or other fluid film for its operation. This will have a sufficient capacity to serve as a fuel feed pump on Diesel engines.

John C. Gregory, of Los Angeles. VEHICLE LIFTER. This may be adapted to lift a motor vehicle to take load off from the tires when the vehicle is to stand idle for some time, and obviously the tires, rims and wheels may be removed and changed while the vehicle is lifted.

Albert Bullock, of Los Angeles. WELL DRILLING APPARATUS. This device may be inserted into a well in the process of drilling and which will have incorporated therein means for revolving a tool shank adopted to receive any of the standard forms of drilling tool.

George S. Halso, Long Beach. WINDOW FASTENER. This is for windows of the vertically slidable sash type, and the object is to provide a fastener which is adapted to lock a pair of slidable window sash together in either a closed or a partly open position.

Vernon C. Sparks, Stockton, a patent for WATER PUMP FOR GAS ENGINES which is so arranged that it may be attached to the cylinder block of the engine in place of the usual water-outlet elbow or pipe.

Stonewall Jackson Freeman, Fresno. HOSE COUPLING. This is adapted especially for use in connecting hose to outlets located in positions where it is practically impossible to use a wrench to tighten them.

John R. Lowery, San Pedro. HOSE COUPLING. This device can be easily connected or disconnected and produces a fluid tight joint when properly connected, and, further to provide a coupling that will be very effective in performing its intended functions.

Arthur C. Dennis, San Francisco. LOADING AND DISCHARGING APPARATUS. This invention includes an excavator or scraper means acting in concert with an improved conveyor structure for conveying and depositing the material to the desired point of disposition.

Robert C. Hoyt, Oakland. GAS HEATER. This heater is of the radiator type, and radiates the heat chiefly from the front columns by retarding the heat units, and provides a comparatively cool surface under the heater.

Richard M. Finn, Mill Valley. METH-OD FOR GALVANIZING CYLINDRICAL BODIES. This is applicable to secure a perfect galvanized surface of even thickness on cylindrical or substantially cylindrical articles. Finn assigns his patent to John Finn Metal Works, of San Francisco.

Arthur Ernest Anakin, Long Beach. AUXILIARY LOCK FOR SAFES AND VAULTS. This is primarily intended for upon safes and vaults, although it may be utilized in connection with any form of lock where an increased degree of safety and protection is desired.

William Lloyd Giles, Santa Ana. CONCRETE-FORM TIE AND SPACER. This has to do with devices for tying and spacing opposite boards or plates of concrete forms and similar apparatus. Giles assigns his patent to David Eaker Smith, of Los Angeles.

David P. Cleveland, Oakland. PROCESS OF REMOVING SURFACE FINISH. This has to do with the direction upon a surface of a hot fluid containing caustic alkali or equivalent ingredients. Cleveland assigns his patent to Universal Paint Remover and Motor Cleaning Company, of Dallas.

Albert L. Tietze, Huntington Beach. SAFETY WRENCH. This wrench is adapted for screwing up or unscrewing the joints in the sucker rods of deep well pumps and for other like uses. Tietze assigns his patent to Standard Oil Company, of San Francisco.

John F. Makowski, Stockton. PLASTER LATH. This is to be used as a substitute for wooden or metal lath heretofore commonly used in the plastering art. This is a continuation of Serial No. 608,595 filed December 23, 1922. Makowski assigns his patent to California Cedar Products Company, of Stockton.

Laurence West Wyman, Oakland. WATER GATE. This gate will be economical to manufacture and easy to install, especially and particularly with respect to the means for locking it is different directions. Wyman assigns his patent to California Culvert Company, of Oakland.

Eugene J. Shardin, Los Angeles. COMBINED SCRAPING AND FINISHING PLANE. This provides means by which relatively wide blades of various widths can be effectively used in one width and the same plane to permit the plane to be used either as a scraping or finishing plane for flooring, furniture or other interior trim.

Eli S. Straub, Los Angeles. DOOR-OPERATING MECHANISM. This is for operating swinging doors from a remote point, it is positive in action and readily actuated to effect the opening and closing of a door and the latching thereof when in closed position.

William A. Trout, Los Angeles. DERRICK CONSTRUCTION. This relates to well drilling equipment and particularly to derricks of the type used in the petroleum oil producing industries. Trout assigns his patent to Emeco Steel Products Company.

Building News Section

APARTMENTS

Contract Awarded.
APARTMENTS. Cost, \$25,000
SAN FRANCISCO. Twenty-fourth St.
 and Vicksburg.
Three-story frame and stucco apartment house.
Owner—Henry Crossfield.
Architect—Albert Schroeffer, 68 Post St., San Francisco.
Contractor—G. Peterson, 36 Divisadero St., San Francisco.

To Be Done by Day's Work.
APARTMENTS. Cost, \$45,000
SAN FRANCISCO. SW Green St. and Van Ness Ave.
Four-story and basement concrete (18) apartments.
Owner—Louis Johnson, 729 Occidental Ave., San Francisco.
Architect—None.

Contract Awarded.
APT. BLDG. Cost, \$44,000
SAN FRANCISCO. W Leavenworth St., 115 N Sutter St.
Six-story and basement reinforced concrete apartment bldg.
Owner—C. W. Picketts, Olney G. Gordon and Arthur H. Draughon, Hotel Minster, S. F.
Contractor—E. V. Lacey, 180 Jessie St., S. F.

Contract Awarded.
APARTMENTS. Cost, \$24,537
SAN FRANCISCO. N Page St. 137 W Gough St.
Three-story and basement frame (9) apartments.
Owner—J. Zimmerman.
Architect—None.
Contractor—P. Algot Nelson, 355 Oak St., San Francisco.

Working Drawings Being Prepared.
HOTEL, APTS. Cost, \$—
SAN FRANCISCO. East side Leavenworth St. north of O'Farrell St.
Ten-story steel frame and concrete hotel apartment bldg.
Owner—E. V. Lacey and J. Greenbach, 180 Jessie St., S. F.
Architect—C. O. Clausen, Hearst Bldg., San Francisco.
 Segregated bids will be taken shortly.

Plans Complete.
APARTMENTS. Cost, \$20,000
SAN FRANCISCO. NE cor. Ocean and Grand St.
Three-story and basement frame (9) apartments.
Owner—Theo. De Pass, 180 Jessie St., San Francisco.
Architect—R. E. Irvine, 738 New Call Bldg., S. F.

Sub-Bids Being Taken on all Portions of Work.
APTS. & MKT. Cost, \$90,000
OAKLAND. SW Cor. E 12th & 3rd Ave.
Three-story 48-room brick and concrete apartments and market.
Owner—Turlock Produce Co., E 12th St. and 3rd Ave., Oakland.
Architect—J. Wilkinson, Howard Ave., Piedmont.
Contractor—Barrett & Hilp, 361 12th St., Oakland.

Preliminary Plans Being Prepared.
STORE, APTS. Cost, \$45,000
SAN FRANCISCO. Cor. Irving and 20th Ave.
Three-story frame and stucco store & apt. bldg. (10 apts., 5 stores).
Owner—G. B. Jackson & Son, 1929 Irving St., S. F.
Architect—E. E. Young, 2002 California St., S. F.
 Apartments will be thoroughly modern, steam heating plant, etc.

Bids Being Taken on Revised Plans.
APARTMENTS, ETC. Cost, \$16,000
SAN FRANCISCO. Mission and Wilson Streets.
Two-story frame and stucco undertaking parlors and apartments.
Owner—W. C. Legett.
Architect—O. R. Thayer, 110 Sutter St., San Francisco.

Bids Being Taken.
APARTMENTS. Cost, \$25,000
SAN FRANCISCO. E 9th Ave. 175 S Geary St.
Three-story and basement frame (12) apartments.
Owner—Herman Lawson, 465 Tehama St., San Francisco.
Architect—C. O. Clausen, Hearst Bldg., San Francisco.

Plans Being Prepared.
APARTMENTS. Cost, \$200,000
SACRAMENTO. Opp. Capitol grounds.
Six-story reinforced concrete apartment, (community) house, containing ten apartments.
Owner—Withheld.
Architect—Quandt & Bos, Humboldt Bk. Bldg., S. F.

To Be Done By Day's Work.
APARTMENTS. Cost, \$30,000
SAN FRANCISCO. S Union 85 W Pierce.
Three-story and basement frame (12) apartments.
Owner—Emil Nelson, 73 Allston Way, San Francisco.
Architect—Eaumann & Jose, 251 Kearny St., S. F.

Contract Awarded.
APARTMENTS. Cost, \$32,000
SAN FRANCISCO. SE Gore Cervantes Blvd. & Beach St.
Three-story and basement frame (12) apartments.
Owner—Dr. J. K. Plines, 350 Post St., S. F.
Architect—P. Righetto, 12 Geary St., S. F.
Contractor—Mazzuchi & Volfatti, 1006 Hampshire St.

LOS ANGELES, Los Angeles Co., Cal.
—Harvey D. Thornburg, 6381 Hollywood Blvd., has had plans prepared for 4-story and basement Class C apartment building, 88x125 ft., at 1401-15 Las Palmas Ave. for sale. Contract will probably be let and work started within 3 weeks. Building will contain fifty-one 2 and 3-room apartments; face brick, art stone, composition floor, galvanized iron cornice, skylights, metal sash, structural steel, terrazzo lobby floor, tiled baths, pine floors, mail boxes, fire escapes, automatic electric elevator, built-in, beds, vacuum cleaning, refrigerating system, gas-steam radiators, Pittsburgh water heater. Cost, \$125,000.

BONDS

YUBA CITY, Sutter Co., Cal.—Election will be held March 24 in Yuba City School District to vote bonds of \$27,500 to finance construction of additional classrooms to present school. Trustees of district are: E. E. Werney, Geo. W. Johnson and Louis P. Rockholt.

EMERYVILLE, Alameda Co., Cal.—Election held to vote on formation of proposed Emeryville High School District carried. Election will be called shortly to vote bonds of \$60,000 to finance erection of new high school.

TRACY, San Joaquin Co., Cal.—Bonds of \$18,000 voted to finance construction of additions to standing schools.

SANTA PAULA, Ventura Co., Cal.—Briggs school district will call bond election soon to vote on \$80,000 issue to finance new 6-room fireproof school. Jessie Knight, clerk of board of trustees.

PETALUMA, Sonoma Co., Cal.—Wauha School District votes bonds of \$10,000 to finance erection of new school to replace present structure.

BANTA, San Joaquin Co., Cal.—Trustees of Valley School District contemplate erection of new school. A bond issue is proposed to finance.

 Phones—Douglas 300—Sutter 3334—"Both Easy to Remember"
SAND—CRUSHED ROCK—GRAVEL

San Francisco, February 21, 1925

Dear Sirs:—

We enclose a sample of **PRATTCO AMBER MIXED SAND**. This statement means more than you probably realize and if you will examine the sample you will be convinced that Pratto Amber Mixed Sand (50% of No. 2—fine Pratto Amber, and 50% of No. 4—coarse Pratto Amber) is an absolutely perfect sand.

The great value of this sand is that we mix the coarse (No. 4), and the fine (No. 2), in a proportion you or your particular job requires. You can have 50% of No. 2 (fine) and 50% of No. 4 (coarse). If you find that the mixture is short of fines, we add more of the fine sand, or if you want more coarse sand, then we can add all the coarse sand your little heart desires.

Believe it or not, at one time we were making this mixture of fine and coarse sand for three of the largest users of sand in California. One concern used a mixture of half coarse and half fine sand. The second firm used a 60%—40% mixture and the other fellow had us mix 75% of coarse sand with 25% of fine sand. All three engineers were made happy and, no doubt, each had a sand absolutely perfect for his particular job. Anyway we made them all happy by giving them just what they asked for. We can do the same for you.

The T. I. Butler Co. (sometimes called Pacific Gravel Co.) is now completing bunkers at its yard 7th and Berry Streets, (center of San Francisco) for the exclusive storage of our Pratto Amber Mixed Sand (a perfect mixture of fines and coarse). You can buy a yard or train load from this progressive firm. Butler will also carry in his bunkers, Pratto Amber No. 4 (coarse), and Pratto Amber No. 2 (fine) sand.

"SANDY" PRATT.

THE ABOVE letter was mailed.
 TO MOST everyone.
 IN SAN Francisco.
 AND A sample.
 OF "PRATTCO Amber Mixed" sand.
 WAS ENCLOSED.
 SO YOU could see.
 FOR YOURSELF.
 JUST WHY T. I. Butler Co.

AT SEVENTH and Berry Streets.
 ARE BUILDING bunkers.
 FOR THE exclusive use.
 OF "PRATTCO Amber Mixed" sand.
 BUTLER WILL deliver.
 THIS WONDERFUL sand.
 TO ANY point.
 IN SAN Francisco.
 "I THANK you."

In a few days, or when T. I. Butler Co. (sometimes Pacific Gravel Co.), finishes his bunkers at 7th and Berry streets for "Pratto Amber Mixed" sand the Pratt Building Material Co. will bring the Pratto Amber Silver Cornet Brass Band up from Pratto (Monterey Co.) and the Builders' Exchange will celebrate.

LOS ANGELES — Bd. of educ. has commissioned architects to prepare plans for new high school bldgs. as follows: Edwin Bergstrom, John C. D-1485—Milwaukee, Wis. Manufacturers of line of rust, heat and flame-proof paints and enamels want representative San Francisco; prefer firm or individual selling to Mill and Factory Supply houses.

BELGIAN CEMENT IN STATE ROADS IS PROTESTED

The use of 7500 tons of Belgian cement in state highway construction in Amador county will result in a loss of \$4000 to the state in taxation on transportation and loss of \$12,000 in electric power taxes, it was declared at a meeting of the executive committee of the Department of Mines and Mining of the Sacramento Chamber of Commerce.

Bert Hews, manager of the department, told the committee that twenty-four shiploads of Belgian cement has been ordered by the state highway commission for use on state highway construction.

A resolution was adopted by the board calling the attention of the California Development Association to the order. Belgian cement, it was declared, can be shipped into the country cheaper than it can be manufactured here, but its use will result in a loss to the state.

MILLWORK

A service of real value is offered by

National Mill & Lumber Co.

We are glad to place at your disposal, without obligation, the services of a corps of skilled estimators, with wide experience in figuring general millwork, cabinet work and detail work of all kinds. Official Proposals

BIDS WANTED FOR HIGHWAY IMPROVEMENT. NOTICE TO CONTRACTORS

(Humboldt County, Nevada State)

Sealed proposals will be received by the undersigned until 1:30 P. M., March 25, 1925, for constructing a portion of the State Highway System in Humboldt County, between Winnemucca and Golconda, and from 8 1/2 miles east of Golconda to Stonehouse, work consisting of grading, construction of culverts and placing of gravel surface. Alternate proposals will be received as follows:

Proposal No. 1, Winnemucca to 8 miles East; Proposal No. 2, 8 miles east of Winnemucca to Golconda; Proposal No. 3, 8 1/2 miles east of Golconda to Stonehouse; Proposal No. 4, Above three sections combined in one bid.

Plans may be examined and form of proposal, contract and specifications secured in the office of the undersigned, may also be examined in the county clerk's office at Winnemucca, the division offices at Elko, Reno and Las Vegas and the district office of the Bureau of Public Roads, Bay Building, San Francisco. For copy of plans undersigned requires a deposit of fifteen dollars (\$15.00), which will be refunded upon return of plans in good condition within 30 days after opening of bids. Bids must be on proposal form of Highway Department and must be accompanied by a certified check in the amount of 5 per cent of bid.

Each bidder must accompany his bid with certificate from a surety company, duly authorized to do business in Nevada, stating that such surety company will provide said bidder with bond in such sum as is required in and in accordance with the provisions of said specifications, conditioned for faithful performance of the contract and specifications.

Right is reserved to reject any or all bids.

GEO. W. BORDEN,
State Highway Engineer,
Carson City, Nevada.

NOTICE TO CONTRACTORS

(Pier No. 40—State Board of Harbor Commissioners)

OFFICE OF THE BOARD OF State Harbor Commissioners, Union Depot and Ferry House, San Francisco, California, February 24, 1925.

Sealed proposals or bids will be received at this office at or prior to 2 o'clock P. M., Thursday, March 12, 1925, for turning out material, making alterations and additions to Pier 40, on the waterfront of the City and County of San Francisco, in accordance with plans and specifications adopted by the Board of Harbor Commissioners, February 19, 1925, and on file in this office, to which special reference is hereby made.

The work to be done under these specifications consists in removing such portions of abandoned existing structures as are within the lines and which will interfere with the construction of the new work, furnishing all necessary materials (except Portland cement, rails and fittings and crossrods piles, which will be furnished to the Contractor by the Board), labor, tools, machinery and equipment for making alterations and additions to Pier No. 40.

The materials to be used in this work shall consist of the following quantities of crossrods piles, steel rails and fittings and Portland cement (all of which will be furnished to the Contractor by the Board), green pile butts, crossrods, Douglas fir lumber, untreated Douglas fir lumber, redwood lumber, structural steel, steel fastenings, castings, roofing materials, galvanized iron, glass, painting materials, etc. Crossrods piles and Portland

A call for bids published in this section indicates that bids are desired from other than local bidders. Maximum competition is desired, and this is assured through BUILDING AND ENGINEERING NEWS which reaches every worth-while contractor and materialman in Central and Northern California who bids on public work.

Rate: 10 cents per line, per insertion.

All official calls for bids of the California State Highway Commission and Nevada State Highway Commission are published in this section.

cement will be furnished to the Contractor by the Board; steel rails and standard fittings, including rail spikes, will be furnished by the Board. All other materials shown on the plans or called for in these specifications shall be furnished by the Contractor.

No bid will be received unless it is made on a blank form furnished from this office and is accompanied by a certified check for an amount equal to five (5) per cent of the amount of the proposal, to be made payable to the Secretary of the Board, conditioned that if the proposal is accepted and the contract awarded, and if the bidder shall fail or neglect to execute a contract and give the bond required within six (6) days after the award is made, in that case the said sum mentioned in said check shall be deemed liquidated damages for such failure and neglect, and shall be paid into the San Francisco Harbor Improvement Fund.

Bids will not be considered by the Board unless delivered to the Secretary or to the Assistant Secretary, at the office of the Secretary, Room No. 17, Union Depot and Ferry House, at or prior to 2 o'clock P. M., on Thursday, March 12, 1925, at which time and place the bids will be publicly opened. The Board reserves the right to reject any or all bids if deemed for the best interests of the State.

Plans and specifications for this work to be had at Room 18, Union Depot and Ferry House upon depositing \$20.00 for same which will be returned on return of plans and specifications.

Bidders are requested to mark envelope containing bid: "Bid for Making Alterations and Additions to Pier 40."

CHAS. H. SPEAR,
M. F. COCHRANE,
JOHN B. SANFORD,
Board of State Harbor Commissioners.
FRANK G. WHITE,
Chief Engineer.

J. L. Phelps, Secretary.

NOTICE TO CONTRACTORS

(Heating & Ventilating—Eureka High School District)

Notice is hereby given that the Board of Education of the Eureka High School District of Humboldt County,

hereby calls for sealed proposals to be delivered to George B. Albee, Secretary of said Board, Eureka, California, until Wednesday, the 18th day of March, 1925, at 8 o'clock p. m., at which time said bids will be opened, for the heating and ventilating of the Eureka High School Building for the Eureka High School District, located on property described as "Property bounded on the West by 'J' Street, and on the North by Del Norte Street, and on the East by 'N' Street, and on the South by Trinity Street, in the City of Eureka, County of Humboldt, State of California."

These bids shall be presented in accordance with plans and specifications for said building on file in the office of George B. Albee, Secretary of the Board of Education and in the office of the Architect, John J. Donovan, 1916 Broadway, Oakland, California.

Bids must be made on proposals obtained at the office of the Architect and be signed by the bidder and accompanied by a certified check certified to by some responsible bank or banker, made payable to the Eureka High School District, of the City of Eureka, Humboldt County, California, to be retained by said School District as security for the faithful performance of the contract or any bond required by law. The amount of said check shall be for at least ten (10%) per cent of the amount of the bid. Each bidder shall execute the affidavit accompanying the proposals obtained from the Architect.

Bids will be opened by the Board of said District on Wednesday, the 18th day of March, 1925, at 10 o'clock a. m. in the office of the Board in said City of Eureka.

The Board reserves the right to reject any and all bids.

GEO. B. ALBEE,
Secretary of the Board of Education.

NOTICE TO CONTRACTORS

BLUE DIAMOND GYPSUM PLANT FOR NEVADA STATE

(Special Correspondence)

The Blue Diamond Company of Los Angeles has purchased a large acreage of gypsum land thirty-two miles west of Las Vegas, near Potosi mountain at the south end of the Charleston range, sixteen miles from Arden, Nevada, and plans to establish a plant to ship the product in the raw and finished state. H. R. Ludlow, formerly with the Stone & Webster Corporation, has been appointed superintendent and is now engaged installing temporary housing. The Union Pacific has surveyed eleven miles of branch railroad line to connect with the lands. The company plans the construction of an aerial tramway 2000 feet long to connect with the top of the mountain, where the gypsum beds are found, with shipping bins down at the tracks. Operations at the plant will be conducted under the name of the Blue Diamond Company of Nevada.

VALUE OF ILLUMINATION COMPARED WITH OTHER ARCHITECTURAL DECORATION

What is the value of exterior ornament on a commercial building? The impossibility of answering this question in mathematical terms is probably the chief reason for the great diversity in the degree of present day adornment—a diversity extending from the painfully plain to the foolishly ornate; but a factor that adds vastly to the interest of our facades.

Since, however, practically every building carries at least a modicum of ornament, either in recognition of its commercial value or in deference to esthetic demand, it is obviously the duty of the designer to make his ornamentation as effective as possible. With the development of modern lighting a new element was introduced into the problem, but one whose importance and possibilities are sometimes overlooked.

Light, either direct or reflected, can be made a strikingly beautiful thing, and the architect who is limited in what he may spend on beautification may well consider its possibilities in yielding a maximum result from funds available. On the other hand the value, whether it be commercial or esthetic, of a rich embellishment in stone or terra cotta can be obviously increased by illumination, and the cost of this increase may be proportionately very small.

For instance, if it is considered that a building is subject to view by daylight by a substantial number of people from 7:30 A. M. to 6:30 P. M., or eleven hours as a daily average throughout the year, there still remains the time from 6:30 P. M. until theatre closing at, say, eleven o'clock, during which the beauties of advan-

tageously located buildings are wasted unless artificially lighted. Artistic lighting can thus be used to add about 40 per cent to the useful time of the ornamentation. Of course in most instances fewer people will see the building at night than by daylight; but as an offset there are the facts that the striking character of the night display attracts more attention than the ordinary daylight appearance, and that the majority of observers will be in more leisurely mood or even directly seeking enjoyment. It is thus probably fair to consider illumination as adding something in the neighborhood of 40 per cent to the value of exterior decoration. As a matter of fact illumination does more than this for it can lend beauty and draw attention to the building even when directed against the simplest structural elements.

The cost of illumination can be compared with the cost of other features of the building by the simple process of capitalization. Thus if ornamental lighting costs \$1200 per year and money is worth 6 per cent, the permanent lighting cost that may be compared with the cost of the building itself or any of its permanent parts is \$20,000. This assumes a building of tolerably long life—say 50 years or more—for which a more refined calculation on the basis of life is unnecessary. For cost of lighting short lived structures accurate comparison may also be made by simple formulas—Engineering and Contracting.

"The steel outlook never was better and all steel companies should show improved earnings this year over 1924" is a statement recently made by Chas. M. Schwab, chairman of the Bethlehem Steel Corporation. Prices, he asserted, will increase at least \$10 a ton because of the increased cost of raw materials.

HUTCHINSON LUMBER COMPANY IS EXPANDING

A. H. Land, vice-president of the Hutchinson Lumber Co., reports a favorable outlook for lumber operations during the coming season. In regard to his own company he said:

"We have improved and enlarged our mill facilities to handle about 100,000,000 feet of lumber this year, as against 40,000,000 feet last year. The company has extended its logging railroad and has practically all of the railroad that will be needed for the next ten years.

"Since the organization of the company, we have been operating in timber which was cut over a number of years ago. Sometime this year we should enter virgin timber where the stand is very heavy. This will, of course result in lower production cost and more profitable operation.

"Despite the fact that operations since organization have been in poor timber, the company has retired \$200,000 or 10 per cent of its \$2,000,000 bond issue, and has charged off large amounts against earnings for depreciation and depletion.

"The Hutchinson lumber properties represent an investment of about \$7,000,000 against which there is outstanding, largely among California investors, \$1,800,000, of an original \$2,000,000 bond issue. The timber alone is valued at over 120 per cent of the bond issue.

"Logging equipment and the railroad alone represent an investment greater than the bond issue. The mill property and net current assets exceed in value the amount of bonds; so that each of the three principal divisions of the company's properties exceed the amount of its indebtedness."

KOEHRING

DANDIE Light Mixer

Dandie with steel disc wheels and solid rubber tires; power charging skip, water tank and gasoline engine.

Dandie with steel trucks; power charging skip, water tank and gasoline engine.

EQUIP it to your special needs. Rubber tires to save the time waste of between-job hauls, and to expand your working territory. *Light duty hoist. Low charging platform or power charging skip. Automatic water-measuring tank.*

Most important, you can be sure of full capacity—utmost reliability—and long service life—because this mixer is Koehring built, engineered and constructed to out work, out last anything in the light mixer field. Price? Not the lowest price

—no—but the most remarkable value of all light mixers—and still within the range of light mixer prices.

CAPACITIES

4 and 7 cu. ft. mixed concrete, steam or gasoline power. May be equipped with power charging skip or low charging platform with hopper, light duty hoist, automatic water measuring tank. Mixes mortar as well as concrete.

MORE FOREIGN CEMENT

The steamer "City of Victoria" has arrived in the Oakland harbor with a shipment of 50,000 sacks of cement from Belgium. This shipment is reported to be the largest received in the East Bay section. According to newspaper advices from Oakland "the cargo in the freighter is but part of the general movement of this material which has been coming into California in constantly increasing quantities from Belgium. The cement is brought across the Atlantic through the canal with its tolls and up the Pacific coast to the local wharves and landed at a cost that is considerably less than that of the California produced material. According to contractors who have been using the product, it is also of a high quality."

RUSSIA SEEKS AMERICAN ARCHITECT

A recent press dispatch states that Assonowa, a Russian architectural society in Moscow, has written Frank Lloyd Wright, architect and engineer of Chicago, asking him to come to Russia and assist in new work.

The society invited Mr. Wright to join it first of all in the designing of the "temple of work," which it is understood the soviet government has planned to build in Moscow as something of a monument to the end of czarism and the birth of toilers' freedom.

BASIC MATERIALS PRODUCTION PICKS UP MATERIALLY

Production of basic materials is picking up speed in anticipation of the spring building demand. Engineering News-Record (New York) reports in its weekly summary of the construction situation. More than the usual quantities of common brick are stored in yards for use between now and June. Cement production will not awake fully from the winter lethargy until next month.

Builders expect construction will be slightly more costly this spring than last. A tightening of the situation is looked for in April and May. Labor continues easier to get without bonuses. Since materials manufacturers and dealers and the skilled workmen bold out no promises of recessions from present schedules, many of the builders say, the only influence which could cause lower costs would be a drop in the volume of projected work. Consistent gain in the number of projects out for bids makes any such slackening in spring construction volume seem unlikely.

Steel demand is particularly heavy and unfilled orders equal the totals of August, 1923, at which time structural were selling at \$2.50 per 100 pounds. Pittsburgh mills. The price today ranges from \$2 on heavy tonnages to \$2.20 per 100 pounds for smaller lots, at mill. Any increase in demand simply will bring the price nearer to the \$2.50 level.

Pine lumber demand increases daily. The situation in the fir lumber producing regions of the Northwest is just the opposite. Lumber production generally is heavier than a year ago. Most buyers believe such materials as non-ferrous metals and linseed oil will reach higher levels in the near future. Paint materials, other than linseed oil, and glass, as well as other building materials, are not expected to advance much over present figures.

LUMBER INDUSTRY SPEEDS UP

A sharp upturn in the lumber industry, the National Lumber Manufacturers Association says, is indicated by a summary of telegraphic reports received from 352 of the chief commercial softwood mills of the country, covering their activities for the week ending February 28. Although the number of reporting mills was 14 less than for the preceding week, there was an increase in new business, a heavy gain in shipments, and a slight increase in production. More significant, perhaps, is the fact that the 352 mills referred to, as compared with 386 mills reporting for the corresponding period of 1924, had a 10 per cent larger volume of new business and a slight increase in shipments, notwithstanding the fact that 1924 shipments were very heavy. On the other hand, there was a slight decrease in production.

The unfilled orders of 249 Southern Pine and West Coast mills at the end of last week amounted to 635,614,583 feet as against 634,882,695 feet for 247 mills the previous week. The 129 identical Southern Pine mills in this group showed unfilled orders of 244,123,092 feet for the same number of mills the preceding week. For 120 West Coast mills the unfilled orders were 391,491,491 feet, as against 387,543,144 feet for 118 mills a week earlier.

Altogether the 352 comparably reporting mills had shipments 106 per cent and orders 95 per cent of actual production. For the Southern Pine mills these percentages were respectively 97 and 93; and for the West Coast mills 107 and 96.

Of the comparably reporting mills, 335 (having a normal production for the week of 214,153,100 feet) reported production 100 per cent of normal, shipments 107 per cent, and orders 97 per cent thereof.

LOCAL PRODUCTS AND LABOR FOR OAKLAND SCHOOL WORK

Oakland has \$9,600,000 to build new schools and additions to standing structures, and, as far as is possible, local materials and labor will be used to complete the construction program.

The move to have a clause inserted in all school building contracts giving preference to local industrial and labor market followed a conference at which plans for the building of the new \$200,000 Cole school were discussed. The clause agreed upon and which will be inserted in every school building contract reads:

The first party states as its policy that it is its desire, all things being equal, that preference should be given in the performance of labor under the building of persons who have actually resided in Alameda county for the period of one year preceding the date of their engagement to perform labor hereunder, and to citizens of the United States or persons who have declared their intentions of becoming such. The first party also states that it is its desire that preference should be given in the use of materials under this contract to such materials as are manufactured in Alameda county and the state of California, price, fitness and quality being equal.

S. F. BUILDING IN FEBRUARY TOTALS \$3,871,487

Building construction in San Francisco for the month of February, 1925, totaled \$3,871,487, according to figures compiled by John P. Horgan, chief inspector of buildings of the Department of Public Works. During the month 846 permits were issued as compared with 875 permits in January. The January operations totaled \$4,403,623 as compared with \$3,178,412 for the same period in 1924 when 773 permits were granted. February operations in 1924 totaled 794 permits for improvements representing an expenditure of \$3,912,166.

Following is a segregated report covering the activities of February, 1925, as compiled by the city building department:

Class	No. of Permits	Est. Cost
A	1	\$ 500,000
B	2	165,000
C	28	523,529
Frames	456	2,332,683
Alterations	357	295,175
Harbor Bldgs.	2	54,100
Total	846	\$3,871,487

THE OBSERVER

WHAT HE HEARS AND SEES ON HIS ROUNDS

The House of Representatives on February 2nd passed a lump sum appropriation of \$150,000,000 for public buildings throughout the United States in the next five years. It is believed that a lump sum appropriation will eliminate the former practice of distributing the money according to congressional districts, instead of according to the real needs of the cities in which the buildings were to be erected.

Out of the 2700 night students enrolled at the Carnegie Institute of Technology, Pittsburgh, more than 1700 are in the College of Industry courses, building and machinery trades, 844 or nearly half of the 1700 are in the building trades courses. The enrollment in this department has increased over 100 per cent in the last three years. In the building courses 174 are enrolled in electrical lines, 124 in carpentry shop work and 115 in the plumbing courses.

Effective February 1st the union wage for carpenters in San Antonio will be \$1.00 per hour, in place of 87½ cents which was the prevailing rate during 1924. Work done on all contracts secured prior to December 1, 1924, will be paid at the old rate, while on all contracts signed since that date the \$1.00 rate will prevail.

Forward orders of the United States Steel Corporation increased 247,448 tons in the month ended February 28, according to the monthly statement of the corporation. Unfilled tonnage February 23 was 5,234,771 tons, against 5,037,321 tons on January 31, and 4,816,676 on December 31, 1924. One year ago the corporation reported unfilled orders of 4,912,901 tons.

Construction of a twelve-story apartment house at the northeast corner of Steiner and Jackson Streets, San Francisco, is opposed by residents of that district. J. J. Havside proposes to erect the structure. Residents object to the height of the structure. The matter is before the City Planning Commission.

Persistence in refusing to accept the decisions of the National Board for Jurisdictional Awards cost the Carpenters District Council of Newark, New Jersey, its seat in the Building Trades council. About six weeks ago the council announced that any local organization refusing to abide by the decisions of the Board would be expelled from membership.

Demands of the United Building Trades Council for a new wage agreement, approximately 15 per cent higher than the present one, which expires April 1, threatens the stability of the building industry in Boston. Employers contend there is no justification for an increase, but offer to renew the present scale for a three years' period, instead of the usual two years.

Voters of Santa Clara County defeated the proposal to form a district to conserve waste waters of the valley, the vote being 960 in favor and 6084 against, a ratio of more than 6 to 1.

San Francisco and Alameda County Bridge Company has been incorporated with a capital stock of \$300,000. The particular project the company is interested in is not stated in the incorporation papers. Generally the purposes of the corporation are to own and operate toll bridges, piers, and wharves along and across navigable bays, rivers and arms of the sea. Incorporators are: Burke Corbet, Arthur C. Everham and A. W. Deuel of San Francisco, Frank H. Rickey of Oakland, and John R. Selby of Palo Alto.

The Oakland city council has received a request from Chairman R. S. Buck of the Oakland trades unions' committee on unemployment, for an appropriation by the city of Oakland of a sum sufficient to provide work at \$5 a day for nearly 2000 men said to be out of employment in Oakland. The majority of the men, Buck reports, are unskilled or semi-skilled laborers.

Contractors on river and harbor work who, because of error by government inspectors are required to do dredging work not contemplated in their contracts and who were paid by the cubic yards of material removed, are not entitled to additional compensation, the Supreme Court held in a case from Maryland brought by Sanford & Brooks Co.

W. B. Griswold, founder of the Griswold Lumber Co., died in Oakland, March 7. Deceased was a native of Missouri and was born November 9, 1834. He crossed the plains in 1852 and had been a resident of Chico for 30 years prior to going to Oakland.

The proposal to vote a new charter to put in a city manager form of government was adopted at Monterey by a 3½ to 1 vote. At the present time Monterey has a commission form of government.

Paddack Engineering Corporation, capitalized at \$100,000, has been incorporated in San Francisco. Directors are: Clark Wise, C. S. Walter, S. D. Paddack, R. A. Wise and F. W. Duden.

Nevada Irrigation District, in Nevada county, recently authorized the issuance of \$7,250,000 in bonds to finance construction of irrigation works. The district comprises about 156,000 acres.

E. M. Prescott, brick and lumber dealer of Fresno, has announced his intention of being a candidate for mayor of that city. The election will be held April 13.

U. S. Civil Service Commission, Washington, D. C., announces examination will be held shortly for the position of Architectural Draftsman, paying an entrance salary of \$2500 a year. Application blanks for examination are obtainable from post office or customhouse in any city.

A proposal to abolish the office of mayor and establish a city manager form of government was defeated in Seattle by a vote of approximately 4472.

PUBLICATIONS

The Richardson Company, Lockland, Cincinnati, Ohio, is distributing a new booklet containing a wide variety of exclusive color effects in Richardson multichrome roofs. With the booklet is included the Richardson harmonizer, a practical means for determining in advance how a house with a certain body color, a certain trim color, and a certain roof color will really look when finished. With the harmonizer 54 different combinations of roof and house colors can be obtained; and while the reader can make his own choice, the suggestions under each roof shown indicate the combinations that authorities on color harmony have selected as the best.

Industrial Works, Bay City, Michigan is distributing a bulletin describing the new type D crawling tractor crane. The type D is built for either steam, electric, or gasoline power, and is mounted on crawling tractor belts, wide gauge traction wheels, or standard railway trucks of 4 or 6 wheels. It may be used interchangeably with clamshell bucket, electro-magnet, hook and block, dipper arm shovel, dragline, or pile driver leaders. It is designed for building and road construction; coal, sand, and gravel handling; lumbering and logging; and foundry and general industrial plant use.

J. D. Wallace and Company, 134-158 South California Avenue, Chicago, manufacturers of woodworking machinery, have published the Woodworking Pictorial, a broadside in imitation rotogravure. Many installation photographs have been reproduced in this broadside. Wallace saws, joiners, band saws, and lathes have been photographed in the factories and shops in which they are in use.

Bureau of Standards, United States Department of Commerce, has published circular 192 containing specifications for asphalt prepared roofing. These specifications are based on the results of investigations conducted by the bureau, and cover all types of bituminous roofing. Copies of circular 192 may be obtained from the superintendent of documents, Government Printing Office, Washington, D. C.

The Philip Carey Company, Lockland, Cincinnati, Ohio, has published a number of circulars describing and illustrating Carey floor covering and Ezolamats. The floor covering consists of asphalt saturated felt coated with a specially distilled asphalt, with flake mica embedded in the wearing surface. It is furnished in rolls 36 inches or 72 inches wide, 36 feet long and ½ of an inch in thickness.

A. QUANDT, PAINTING CONTRACTOR, TO TOUR EUROPE

A Quandt, president of A. Quandt & Sons, contracting painters of San Francisco, is making preparations for a tour of Europe, leaving San Francisco April 4 on the Steamer Finland for New York via the Panama Canal, thence to Europe where he plans to spend about three months. Chas. J. U. Koenig, general contractor, will probably accompany Mr. Quandt on his tour.

ORGANIZATION NEWS

Organizations having a direct connection with the construction industry are invited to submit news for publication in this department.

MECHANICAL ENGINEERS TO MEET

Portland, Ore., will be the scene of a regional meeting of the American Society of Mechanical Engineers from June 22 to 25, 1925. This meeting has the backing and co-operation of all A. S. M. E. Sections on the Pacific Coast and it is confidently expected that not less than five hundred engineers will attend.

The meeting will occupy four full days. There will be two technical sessions at that time at which papers will be presented on The Utilization of Wood Waste, The New 3-Inch Suction Diesel Dredge, The Mechanical Engineering Features of the Long Bell Lumber Company's New Saw Mill at Longview, Washington, Electric Logging, Steam Logging, Cable Systems in Recent Logging Developments, and the New Hydroelectric Plant of the Portland Electric Power Company.

FRESNO MATERIALMEN ELECT

The annual meeting of the Fresno Building Material Dealers' Association was held March 3 at the Hotel Fresno. Annual reports were read by President A. E. McWhorter and H. C. Wright in the absence of Secretary L. J. Allen.

Under leadership of F. D. Prescott, members of the association discussed the California lien law.

The following board of directors was elected to serve one year: McWhorter, B. A. Newman, H. H. Courtwright, Frank Minard and Ben Tyre.

CONTRACTORS ELECT

J. S. Christie of the Puget Sound Bridge & Dredging Company has been elected president of the Seattle branch of the Northwest Chapter, Associated General Contractors of America, succeeding G. J. Kieburz. Other officers elected were: C. C. Cawsey, vice-president; A. M. Strandberg of Strandberg & Robinson, secretary, and Alfred Carlson of Scherer & Carlson, treasurer.

ANNUAL MEETING

The annual meeting of the members of the San Francisco Builders' Exchange will be held March 16 in the exchange quarters, 180 Jessie street, at 11 A. M. Reports and general business matters will be considered at 1 P. M. Election of directors for the ensuing year will be held at the same meeting.

PLUMBING INDUSTRY TO MEET IN PORTLAND IN JUNE

At least 2500 representatives of the plumbing industry will convene in Portland, Ore., June 23-24-25, according to Chas. Fullman, secretary of the Oregon association in charge of arrangements.

UNLICENSED ARCHITECT LOSES FEE

That an architect who does not hold a state license cannot hold his client responsible for fees is the judgment of the state supreme court, which recently upheld the decision of the Pierce county court in the case of Fred Travis, Tacoma. Travis designed a Tacoma apartment house and then assigned his assets to Edward M. Sherwood. Sherwood tried to force Travis' client to pay the architect's fee for designing the apartment.

Plan to Finance Painting Contractors

One of the most remarkable trade movements to increase business ever attempted is the "save the surface campaign" of the paint and varnish manufacturers of the United States. Enormous gains in the sale of paints and varnishes have been the result. The latest move in the campaign has been to secure co-operation of financial institutions.

The principle of enabling property owners who desire to have painting done to pay for same in installments was unanimously endorsed by the annual conventions of the Paint Manufacturers' Association of the United States, the National Varnish Manufacturers' Association, and the National Paint, Oil and Varnish Association.

The plan adopted in Philadelphia during the last year has been found to be beneficial alike to property owners, contracting painters, dealers and manufacturers. The details of this plan follow:

Method of Financing Painting Contractors—Painter finds property owner who wants to paint and pay for same over a period of time.

Painter submits estimate including in it an additional 10%.

If satisfactory, property owner signs an application for a loan, agreeing to pay 20% or more in cash to the painter on completion of the work and the balance to the finance company in ten equal installments with interest at 6% per annum on the unpaid monthly balance.

The application is submitted to the finance company which investigates the credit of the property owner and accepts or rejects the loan. A charge of \$1.50 is made by the finance company for each credit investigation.

Painter is advised and if application is accepted proceeds with the work.

On satisfactory completion of the work the painter renders bill to the property owner, who pays to the painter the cash payment agreed upon.

The painter mails the bill showing amount paid and balance due to the finance company.

Finance company pays the painter the amount still due, less a discount of 10%. No reserve is held by the finance company.

The painter has received payment in full for his services.

The agreement is a direct obligation on the part of the property owner to pay the finance company. Neither the painter nor any agency of the paint and varnish industry becomes an endorser or guarantor or in any way contingently liable for payment of loan made by finance company to the property owner.

Method of Financing the Purchase of Paint and Varnish Materials by Property Owner—Where the property owner desires to purchase paint and varnish materials from a retailer and pay for same on the installment plan, the method followed by the dealer is much the same as that followed by the painter, but the terms are slightly different.

The dealer adds a carrying charge of 6% to the sale price of the materials.

The property owner agrees to make a cash payment of 20% or more at the time of the delivery of goods, and agrees to pay the balance to the finance company in equal monthly installments of not less than \$10 per month. No interest charge is made on the unpaid balance.

No charge is made to the dealer for credit investigation, but the property owner should be known as a proper credit risk and carry the recommendation of the dealer. The dealer, however, does not become financially responsible for payment to finance company.

On notification of receipt of goods by property owner, the finance company pays the dealer the amount still due, less a discount of 10%. No reserve is held by the finance company.

Under this plan the dealer, who receives cash, is selling goods at a cash discount of approximately 2% inasmuch as 2% is the difference between 6% added to the total sale price and the discount of 10% of the unpaid balance charged by the finance company.—Southwest Builder.

SPECIFICATIONS FOR ASPHALT PREPARED ROOFING ADOPTED

Specifications for asphalt prepared roofing, based on the results of investigations conducted by the Bureau of Standards, Department of Commerce, have been adopted by the Federal Specifications Board to serve as U. S. Government Master Specifications for the purchase of this material.

Two weights of this roofing have been covered by the specifications, medium and heavy weight, averaging 45 and 55 pounds respectively per 108 square feet of area. The detailed requirements specified cover appearance, maximum and minimum weight, pliability, and behavior of the roofing on heating. Requirements for the dry felt form which the roofing is to be prepared are also given and correspond to Nos. 48 and 60 respectively for the two weights. Specifications for the nails and lap cement used in ap-

plying the roofing are also given, together with methods for its inspection, sampling, and testing.

The investigations on which these specifications are based have been in progress at the Bureau of Standards for years, and have covered all types of bituminous roofing. They have been made in co-operation with the manufacturers and large consumers of the materials, and with government departments interested in them.

These specifications are given in Circular 192 of the Bureau of Standards. Copies may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. The price is 5 cents, cash.

The Master Plumbers' Association of Alameda County, Cal., will hereafter demand a segregation of bids on both public and private work according to an announcement recently made by the secretary of the organization.

TRADE NOTES

The Koppel Industrial Car and Equipment Company of Koppel, Pa., announces the opening of a new sales office in the Rialto Bldg., San Francisco, under the management of Harry C. Kraft. This new sales agency will be known as the Koppel Sales Company, Inc. Both sales and engineering work will be handled by this office, the engineering to be under the management of A. E. Prager, who has had many years' experience in designing and perfecting cars for contracting and engineering purposes. The sales will be under the direction of Harry C. Kraft.

Scott Co., plumbing and heating contractors, are now established in their new home at 113-116 Tenth St., Oakland. The company permanently employs 50 men and has an annual payroll of approximately \$130,000. L. J. Madden, Oakland manager of the concern, announces the new quarters are fully equipped with the latest labor saving devices, such as cutting and threading machines, etc.

A trust indenture executed by the Yosemite Lumber Company under date of January 1st, 1925, in which the Mercantile Trust Company of California and the Detroit Trust Company appear as the trustees, and which is to secure first mortgage sinking fund gold bonds in the amount of \$3,000,000, was recorded at Sonora recently. The property involved is situated in Tuolumne, Mariposa and Merced Counties.

Negotiations have been completed whereby Mark Hein, Napa county supervisor and his brother, J. H. Hein, secures a 20-year option on plant of the Basalt Rock Company, a short distance from Petaluma, the rail and water frontage near the plant and all materials and equipment and buildings. It is reported \$60,000 will be expended in improvements. The plant will be

A certified copy of articles of incorporation of the Western Granite & Marble Co. of San Jose has been filed in that city. The company is capitalized at \$50,000 and will deal in dressed stone, granite and marble. Directors of the company are: William Schuh, Asgeio Morandi, Mathias Verlin, Walter C. Ghetti and A. F. Ciccolletti, all residents of San Jose.

J. G. Bliss, head of the Bay Cities Asbestos Co., Inc., announces his firm has established offices and warehouses in Oakland and will carry a complete line of insulating products. Bliss also announces his company has affiliated with the Johns-Manville Company.

E. F. Schrei of the El Mirador Magnesite Co. has resumed work on the magnesite mine, east of Strathmore in Tulare county. The plant will employ between 20 and 30 men and is said to be the only plant in California producing magnesite in marketable quantities.

The Oakland branch of the Hill-Hubbell and Company, formerly located at 2028 Broadway, has been moved to 3257 San Pablo avenue, Oakland.

Pickering Lumber Co. has filed articles of incorporation at Sonora. The company was organized in 1839 in Louisiana with a capital stock of \$300,000.

Day Labor Construction is Scored

The day labor method of highway construction is not a success, if experiences of the past hold true.

This was the key note of the Association of General Contractors' convention recently closed in Portland, Ore.

Various speakers dwelt on this problem which is one of the most vital in the construction world today.

Gen. R. C. Marshall Jr., general manager of the national organization, in his talk brought out the great harm that is being done through the day labor method, and cited the fact that the situation in Michigan is getting to such a point that the business man, the contractor, is almost on the verge of decriing taxation and refusing to pay taxes, because the day labor condition is driving the contractor out of business there.

Gen. Marshall quoted President Coolidge in his recent address before the general contractors in the east room of the White House on the occasion of the annual meeting in Wash-

ington, in which the nation's chief executive said:

"A recent analysis reached the conclusion that the national income in 1924 was \$53,600,000,000, of which approximately \$6,000,000,000 was expended for construction. That is over 11 per cent of the income. Constructions of one kind and another largely represent the accumulated wealth of a community and it is, therefore, important that they be erected at the lowest feasible expense consistent with a high standard and permanence and usefulness."

Then Gen. Marshall quoted from the view of Herbert Hoover, secretary of commerce, who said recently:

"I would like to see an independent investigation into the relative cost of construction of public works departmentally, as opposed to contracts. I believe that there would be here demonstrated a great public waste. It is my belief, as an engineer, that construction by contract of public works makes for national economy."

Columbia Steel Earnings Near \$300,000

The Columbia Steel Corporation, whose Pittsburg plant was recently greatly enlarged, made net earnings of \$235,106.53 during the past year, according to the annual report submitted to stockholders. The good business of the year past was indicated in the increase of the surplus account from \$837,458 a year ago to \$997,389 this year.

President Wigginton E. Creed reported that dividends on preferred capital stock paid totaled \$470,964, while other dividends paid amounted to \$26,887, or a total dividend payment in 1924 of \$497,851. Gross income of the company during 1924 amounted to \$862,842, while from this sum \$567,736 was deducted for interest, taxes and amortization charges.

All directors were re-elected and the board again chose the same officers. President Creed made the following statement of the year's business:

"Considering the condition of the

steel industry in 1924, the showing of the Columbia Steel Corporation is highly satisfactory. Earnings were sufficient to pay all charges, interest on funded debt and notes payable, amortization of bond discount and expense, provision for taxes for the year and to make proper allowance for depreciation of plant and depreciation of iron and coal deposits and to permit of addition to surplus.

"All of the company's developments and new plants were completed and placed in full operation in 1924. During the year bonded debt of the company was increased \$1,000,000, current liabilities increased \$1,300,000, and additional preferred stock issued to the amount of \$225,000. This money was used chiefly in the development of the Utah properties, where over \$2,600,000 was expended in 1924. In the same period additions to the plant at Pittsburg aggregated \$350,000, and at Los Angeles (Torrance) \$125,000."

Rip Van Winkle Wall Bed Company has purchased property adjoining the present plant at Twenty-second and West streets, Oakland, for plant enlargement. The company announces the opening of a Seattle office, and negotiations under way for a Portland branch. This will give the concern representation in the five principal cities on the Pacific Coast, branches having already been opened in San Francisco, Los Angeles and Oakland.

The Enterprise Foundry Co., 2302 Nineteenth street, San Francisco, is now handling sash chain in connection with their sash weight business. A large stock of all sizes of chain is stocked which enables the company to give immediate shipments on both chain and sash weights.

O. W. Carr, who recently purchased the Exeter Lumber Company business and property at Exeter, has consolidated with C. L. Burnett, forming a new company, which will be known as the Burnett-Carr Lumber Company.

Frederickson & Watson Contracting Co., capitalized at \$50,000, has been incorporated at Sacramento. Directors are: Oscar Frederickson and Robert D. Watson, both of Sacramento, and Otto Bonnessen of Fresno.

Coincident with the production of copper rods and wire at the Pittsburg plant of the Columbia Steel Corporation is the coming of the California Wire & Cable Company to an adjoining five acre tract. All varieties of insulated copper wire will be manufactured from the company's new Pittsburg plant. A separate department will produce lead covered cable. The California Wire & Cable Company now operates a plant at Orange, Calif.

Articles of incorporation of the Salinas Independent Lumber Co. have been filed at Salinas. The company is capitalized at \$50,000 and has the following directors: J. L. Garrissere, Marshall Wood and Mitchell N. Coninos. Yards have been opened in Market St. near Mill St., Salinas.

Paralline Paint Co., has let contracts for two one-story factory buildings at the Los Angeles plant. One building, 100 by 190 feet and another 180 by 760 feet.

Sam Feigthal, Ted Heimle, Otto Heimle and Jake Howden have purchased the Lodi Hardware Company business at Lodi from John Michaelson.

Herbert A. Irtich of San Francisco will operate under the firm name of Inlay Hardwood Company.

Building News Section

APARTMENTS

Contract Awarded.

APARTMENTS Cost, \$16,000
SAN FRANCISCO, 22nd and Castro.
 Two-story and basement frame and stucco apartment house, containing four 1-room apartments.
 Owner—Thos. McCormick, 73 Hill St., San Francisco.
 Architect—Walter C. Falch, Hearst Bldg., S. F.
 Contractor—G. M. Hantzsche, 455 22nd Ave., S. F.

Plans Completed.

APARTMENTS Cost, \$135,000
SAN FRANCISCO, SE Cor. Fourteenth and Valencia Sts., 100 feet frontage on Valencia St. and 75 feet on 14th. Five and part seven-story and basement reinforced concrete apartment and store building, containing 42 2-room apts. and 6 stores. (Granite-cement exterior).
 Owner—Dwelling, Nuttman, McCarthy Co., and J. H. Nuttman, % Architect.
 Architect—G. A. Berger, 261 Valencia St., San Francisco.
 Engineer—Jas. J. Walsh, 112 Market St., San Francisco.

Architectural plans have been completed and engineer's plans will be finished shortly. Construction will be carried on by day's labor, under the direction of the architect and owners.

Contract Awarded.

APARTMENTS Cost, \$65,000
OAKLAND, Alameda Co., Cal., Lots 12 and 13 Blk 1011-G Map No. 2, Sub-division of Ptn. of Central Oakland District.

Three-story and basement frame apartment house.
 Owner—Milton H. and Willie Coleman, 561 Lark Park, Oakland.
 Architect—D. M. Crooks, 532 16th St., Oakland.

Contractor—James L. Rich, 218 Ray Bldg., Oakland.

Completing Plans—Work to be Done by Day's Work.

APT-FLATS Cost, \$22,000
SAN FRANCISCO, Pacific and Salmon Sts.

Two-story and basement frame (4) flats.
 Owner—John Dietzel, Russ Bldg., San Francisco.
 Architect—Wm. Mooser, Nevada Bank Bldg., S. F.

GLENDALE, L. A. Co., Cal.—D. C. Bear, 122 W Broadway, Glendale, will start excav. in 2 weeks and will build by day labor 1-sto. brick and conc. blk. store bldg. and 2-story 42 to 50-fm. stucco apt. bldg. at Maple and Central Aves., Glendale. Plans being prepared by Arch. J. W. Morrison, 702 Orange Grove Ave., Glendale. Five stores, 50 by 100 ft., press. brick front, conc. blk. sidewalks, reinf. conc. rear wall (a retaining wall), plate glass, struc. steel, comp. rf., cem. fls., plbs. in ea. store; apt. bldg. will cover rear part of store bldg. and extend back over hill at rear; 2-story 40 to 50 2-and-3-rm. apts., lobby finished in gum, hdwd. fls., built-in beds, tiled baths and kitchen, hlg. sys. not determined, hot water hrs., front wall conc. blk., plas., side and rear walls, met. lath and plas. ext., comp. rf.; \$130,000.

Contract Awarded.

APARTMENTS Cost, \$19,364
COUNTY OF SANTA CLARA, the ntly 75 ft. of lot 4 blk. 2 range 2 north (65 S 11th St.) San Jose.
 Two-story frame apartment.
 Owner—Catherine L. Miller, San Jose.
 Designer—Roy Babcock, 72 S 6th St., San Jose.
 Contractor—H. A. Bridges and H. I. Murton, R 1, Box 439, Lincoln Ave., San Jose.

To Be Done By Day's Work.

APARTMENTS Cost, \$30,000
SAN FRANCISCO, N Fulton 197 W Fillmore.
 Three-story and basement frame (12) apartments.
 Owner—S. Zuckerman, 1200 Golden Gate Ave., San Francisco.
 Architect—Bauman & Jose, 251 Kearny St., San Francisco.

To Be Done By Days Work.

APARTMENTS Cost, \$20,000
SAN FRANCISCO, E 3rd Ave. 100 N Clement St.
 Three-story and basement frame (12) apartments.
 Owner—H. O. Lindeman, 619 27th Ave San Francisco.
 Architect—Bauman & Jose, 251 Kearny St., San Francisco.

Painting Contract Awarded.

APARTMENTS Cost, \$500,000
SAN FRANCISCO, NW Sacramento and Mason streets.
 Eight-story class A apartment building, 100x150, (pressed brick and terra cotta exterior).
 Owner—Eugene Fritz, 1401 Masonic Ave., San Francisco.
 Architect—E. E. Young, 251 Kearny St., San Francisco.

The owner has awarded contracts as follows:
Painting—A. Quandt & Sons, 374 Guerrero St., S. F.

As previously reported steel contract was awarded to the Central Iron Wks., 2050 Bryant St., San Francisco. Excavating is being done under supervision of Mr. Fritz by day labor. Figures are being taken on the portions of the work. Concrete and carpentry work to Vannucci Bros., 16th and Church Sts., San Francisco. Plumbing and heating to C. Petersen Co., 390 6th St., San Francisco.

Contract Awarded.

PRATT'S CONCRETE MIX

Clarence
by Sand
Pratt

The limelight was focussed on American Locomotive yesterday and it responded by shedding its own effluence upon the New York market, by declaring an extra dividend of \$10.00 in addition to a regular dividend at the rate of \$8.00 per annum. The stock, of course, soared.—Oscar H. Fernback (Financial Editor) in the San Francisco Examiner of March 6, 1925.

<p>THE ABOVE is easy. TO EXPLAIN. WHEN SANDY Pratt. BUILT THE \$250,000.00 plant. TO CRUSH rock and gravel. AT PRATTROCK (near Folsom). SANDY NEEDED a locomotive. FOR THE "Prattrock." AND EASTERN Railroad." OK THE railroad. THAT SANDY uses. TO BRING to the plant. FROM SANDY'S 160-acre "farm." ALL HARD rock and gravel. HENRY FORD has a railroad. SO HAS Sandy Pratt. AND HIS progressive company. HENRY HAULS raw material. FOR HIS millions of autos. SANDY PRATT, President. OF THE Pratt Rock and Gravel Co. AND THE Pratt Building Material Co. BOUGHT AN American Locomotive.</p>	<p>BECAUSE SANDY has 125,000 carloads. OF 50 tons each. OF HARD, clean rock. TO DELIVER to the crusher. THEN TO Sandy's customers. AND THE American locomotive. IS THE best. IN THE world. AND LIKE all the balance. OF THE machinery. AT PRATTROCK (Sacramento County). SANDY AND his associates. BOUGHT THE best. NOW, WHEN the railroads. OF THE world. FOUND OUT. THAT THE "Prattrock" railroad. HAD BOUGHT an American locomotive. THEN EVERYBODY bought them. AND THESE people. DECLARED A flock. OF DIVIDENDS. "I THANK you."</p>
--	--

American Locomotive No. 11 located at Prattrock (near Folsom), home of Sandy Pratt's \$250,000 rock and gravel crushing plants. The "Prattrock and Eastern Railroad" bought an American locomotive and called the world's attention to this wonderful piece of machinery, hence "Prattrock" made the extra dividends. Sandy Pratt also has sand processing plants at Marysville, Sacramento and Prattco (Monterey County) and what would happen to the financial world if Sandy placed American locomotives at these three sand plants?

Working Drawings Being Prepared.

Official Proposals

NOTICE TO CONTRACTORS

(City of Oakland—Cole School)

Office of the Secretary of the Board of Education of the City of Oakland.

Notice is hereby given that the Board of Education of the City of Oakland and the Oakland School District of Alameda County, hereby calls for sealed proposals to be delivered to the Secretary of said Board, Room 211, City Hall, Oakland, California, until Tuesday, the 24th day of March, 1925, at 9:45 o'clock A. M., at which time said bids will be opened, for the erection and completion of the Cole School Building, of the Oakland School District, located on property bounded by Union, Twelfth, Poplar and Tenth Streets, known as Block 561, designated upon a certain map entitled "Map of Blocks 560, 561, 576 and 577 of the City of Oakland," and filed in the office of the Recorder of Alameda County, California, May 26th, 1875. These bids shall be presented in accordance with plans and specifications for said building on file in the office of the Secretary of the Board of Education, City Hall, and in the office of the Superintendent of Buildings, Room 415, 532 16th Street, Oakland, California.

Separate bids will be received for:

(1) General Work
(2) Plumbing, Heating and Ventilating.

On a deposit of Twenty-five (\$25) Dollars, complete sets of plans and specifications may be had by any bidder on application to the Superintendent of Buildings at his office hereinbefore mentioned, and in each case shall be returned within ten (10) days after securing same, to the Superintendent of Buildings. If the plans and specifications are not returned within said time, or if mutilated, the said deposit shall be retained by the said School District as agreed and liquidated damages for said mutilation or detention.

Bids must be made on proposals obtained at the office of the Superintendent of Buildings, and be signed by the bidder and accompanied by a certified check, certified to by some responsible bank or banker and made payable to the Board of Education of the City of Oakland and of the Oakland School District, to be retained by said School District as agreed and liquidated damages should the party or parties to whom the contract should be awarded fail to enter into the contract after the award, or to give bonds required for the faithful performance of the contract, or any bond required by law. The amount of said check shall not exceed Five Thousand (\$5000) Dollars, and for all bids of less than Fifty Thousand (\$50,000) Dollars, said check shall be for at least ten (10%) per cent of the amount of the bid. Each bidder shall execute the affidavit accompanying the proposal obtained from the Superintendent of Buildings.

Bids will be opened by the Board of said District on Tuesday, the 24th day of March, 1925, at 9:45 A. M., in the Board Room, 211 Second Floor, of said City Hall, in the City of Oakland. The Board reserves the right to reject any and all bids or any all items of such bids.

J. W. EDMOND,
Secretary of the Board of Education of Oakland, California.

NOTICE TO CONTRACTORS

(Yards and Docks—Spec. No. 5975)

SEALED PROPOSALS, indorsed "Proposals for Extension to Storehouse, San Francisco, Calif., Specification No. 5975," will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until 11 o'clock A. M., March 25, 1925, and then and there publicly opened, for two-story exten-

A call for bids published in this section indicates that bids are desired from other than local bidders. Maximum competition is desired, and this is assured through BUILDING AND ENGINEERING NEWS which reaches every worth-while contractor and materialman in Central and Northern California who bids on public work.

Rate: 10 cents per line, per insertion.

All official calls for bids of the California State Highway Commission and Nevada State Highway Commission are published in this section.

sion to storehouse at the Marine Corps Depot for Supplies, San Francisco, Calif. Work includes reinforced concrete; steel and iron work; brick and hollow tile; marble toilet work; metal furring and lath; stucco; plaster; steel sash; vault fronts; steel, metal covered and rolling lift doors; woodwork; built up roof, skylights and sheet metal work; hardware; painting and glazing; and plumbing, heating and electrical systems. Specification No. 5075 and accompanying drawings may be obtained on application to the Bureau or to the Commandant, Twelfth Naval District, San Francisco, Calif. Deposit of a check or postal money order for \$20, payable to the Chief of the Bureau of Yards and Docks, is required as security for the safe return of the drawings and specification. L. E. GREGORY, chief of Bureau, February 27, 1925.

NOTICE TO CONTRACTORS

Natorium—Richmond, Calif.)

NOTICE IS HEREBY GIVEN that sealed bids or proposals will be received by the undersigned, Clerk of the City of Richmond, at his office in the City Hall of Richmond, California, up until the hour of 8:00 o'clock P. M. of Monday, March 23, 1925, for the construction of a Municipal Natatorium and Pipe Line in the said City of Richmond, all as described in the plans and specifications for said work adopted by the City Council on the 9th day of March, 1925, and now on file in the office of the said Clerk of the City of Richmond.

All bids must be submitted upon proposal sheets furnished with the plans and specifications.

Copies of Proposal Sheets, Plans and Specifications for the General, Plumbing and Steel and Iron work may be obtained from the Architect, James T. Narbett, 506 Macdonald Ave., Richmond, California.

Copies of Proposal Sheets, Plans and Specifications for the Filtration Plant, Heating Plant and Pipe Line may be obtained from the City Clerk at his office in the City Hall.

Copies of the Proposal Sheets, Plans and Specifications for the Heating Plant may also be obtained from Leland & Haley, Consulting Engineers, 58 Sutter Street, San Francisco, Calif.

A deposit of Ten (\$10) Dollars will be required for each set of plans and specifications, which said deposit will be refunded upon return of the Plans and Specifications in good order.

Each bid must be accompanied by a certified check, upon a responsible bank, made payable to the City of Richmond, equal in amount to at least ten (10%) per cent of the amount of the total bid.

The Council of the City of Richmond reserves the right to reject any or all bids.

By order of the Council of the City of Richmond.

A. C. FARIS,
Clerk of the City of Richmond.
Dated this 10th day of March, 1925.

NOTICE TO CONTRACTORS

(Hangars—Bureau Yards & Docks)

Sealed Proposals, indorsed "Proposals for Hangars, Pearl Harbor, Hawaii, and Coco Solo, Panama, Specification No. 5046," will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until 11 o'clock A. M., April 8, 1925, and there publicly opened, for two hangars, one at the Naval Operating Base (Air Station), Pearl Harbor, T. H., and the other at the Naval Air Station, Coco Solo, C. Z. Each hangar will have concrete floor, steel frame, steel sash, steel sliding doors, asbestos covered metal, built-up roofing, cast-iron piping and electrical work. The hangar at Pearl Harbor will have wood roof sheathing and terra cotta piping. The hangar at Coco Solo will have a precast gypsum tile roof deck. Alternate bids will be received on doors of the bascule type and on corrugated asbestos siding. Specification No. 5046 and accompanying drawings may be obtained on application to the Bureau, to the Commandant, Navy Yard, Mare Island, Calif., to the Commandant, Naval Operating Base, Pearl Harbor, T. H., or to the Commandant, 15th Naval District, Balboa, C. Z. Deposit of a check or postal money order for \$20, payable to the Chief of the Bureau of Yards and Docks, is required as security for the safe return of the drawings and specification. L. E. GREGORY, Chief of Bureau, February 5, 1925.

STATE OF CALIFORNIA

CALIFORNIA HIGHWAY COMMISSION

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received at the office of the California Highway Commission, 515 Forum Building, Sacramento, Cal., until 2 o'clock P. M., April 6, 1925, at which time they will be publicly opened and read, for construction, in accordance with the specifications therefor, to which specific reference is made, of portions of State Highway, as follows:

Humboldt County, on the bridge across Eel River, about ¼ mile north of Scotia (1st and 2nd E) sidewalk, approximately 1,130 feet long, consisting of wood and structural steel; and a redwood block roadway pavement approximately 1,111 feet long and 16 feet 9 inches wide.

Sacramento County, an undergrade crossing, 30 feet wide, under the Sacramento Northern Railroad, near North Sacramento (111-Sac-3-E), consisting of a 61 foot skewed, through steel girder, open deck span on concrete piers.

Sacramento County, an undergrade crossing, 30 feet wide, under the Western Pacific Railroad near North Sacramento, (111-Sac-3-E), consisting of a 62 foot through plate girder, bal-

last deck bridge on triangular concrete abutments.

Imperial County between Imperial and Brawley (Vill.-Imp. 26-F. & G.) about nine and three-tenths (9.3) miles in length to be graded and surfaced with crushed gravel or stone, or with decomposed granite.

Plans may be seen, and forms of proposals, bonds, contract and specifications may be obtained at the said office and they may be seen at the office of the Division Engineers at Los Angeles and San Francisco, and at the office of the Division Engineer of the division in which the work is situated. The Division Engineers' offices are located at Willis, Redding, Sacramento, San Francisco, San Luis Obispo, Fresno, Los Angeles, San Bernardino and Bishop.

A representative from the Division office will be available to accompany prospective bidders for an inspection of work herein contemplated, and Contractors are urged to call on him at location, character and quantity of the work to be done, with a representative of the Commission. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the Division office.

No bid will be received unless it is made on a blank form furnished by the Commission. The special attention of prospective bidders is called to the "Notice to Contractors" annexed to the blank form of proposal, for full directions as to bidding, quantities of work to be done, etc.

The California Highway Commission reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

Dated March 9, 1925.

NOTICE TO BIDDERS

(Turbine Pump—Santa Rosa)

By order of the Board of Public Utilities of the City of Santa Rosa, issued March 9, 1925, sealed bids are invited to be received by said Board up to the hour of 5 o'clock P. M., March 17, 1925, in Room 12, City Hall, for a turbine pump with electric motor, direct connected, of 1200 R. P. M., 440 volts, 60 cycles, also: one flange to connect the pump head to the present flange on the well for sealing off purposes; one eight-inch gate valve and one eight-inch check valve; one water level gauge and pipe to correctly indicate pumping level, also all pipe fittings and flanges necessary to connect the pump to the present system, completely installed.

Conditions are:
Diameter of well, 11½ inches.
Depth of well (a flowing well), 964 feet.

Pump level, 150 feet.
Pumping head above pump base, 8 feet.

Total pumping head, 158 feet.
Gallons per minute, 1000 to 1200.
The successful bidder to take in as part payment, one motor and compressor, which can be seen at pumping station, and remove same at completion and acceptance of the pumping plant herein specified.

A certified check, made payable to Board of Public Utilities, in the sum of 10 per cent. of the bid to accompany the bid. The Board reserves the right to reject any and all bids.

FRED C. STEINER,
President of the Board of Public Utilities.

GEO. R. CADAN,
Secretary of the Board of Public Utilities.

THEATRES

(Continued from Page 16)

SAN FRANCISCO.—Warner Brothers Studio of Hollywood plans to erect a theatre building in Market Street with a seating capacity of 4,000 persons, according to F. L. Warner, one of the

principals in the concern, who is stopping at the St. Francis Hotel. Attempts are being made to purchase a San Francisco theatre and if these negotiations are not closed a new structure will be erected.

Reinforcing Steel Contract Awarded.

EFFECT OF ALKALIES ON CEMENT PIPE

In connection with an investigation by the bureau of public roads of the United States Department of Agriculture concerning the effect of soil alkalies on concrete drain tile, a great many reference publications and articles were located. Believing that a compilation of these references into bibliographical form would be of great advantage to other investigators, the list was published in Department Bulletin 1314. The bibliography is believed to be fairly complete in respect to articles published prior to 1924.

The importance of the problem presented by the use of concrete structures in sea water and in soils containing various acids and alkalies has long been recognized. To one engaged in the study of any phase of the problem the literature extant is indispensable.

A copy of Department Bulletin 1314 may be obtained, as long as the supply lasts, from the United States Department of Agriculture, Washington, D. C.

Mastertex Waterproofing Paint is New Product of Master Builders Co.

A new type of waterproofing paint that can be applied directly to a wet, dripping wall—either the interior surface of a wet basement wall or the outside of a rain-soaked stucco or concrete building—has been developed. It contains no oil or other volatile elements to deteriorate under weather conditions or from the effects of lime in the moist concrete. This is Mastertex, waterproof cement paint, manufactured and sold by The Master Builders Company, Cleveland, Ohio.

Mastertex is a fine, dry powder, which, when mixed with water, forms a paint that both waterproofs and decorates concrete, stucco, and other exposed masonry surfaces and keeps them dry and attractive indefinitely. Its colors are permanent and its indissoluble structure unites with the concrete, brick or stone, and becomes a permanent part of the wall. It is a permanent protection against seepage of moisture, even where it is under some pressure, and is a sure remedy for many conditions where other types of waterproofing media fail.

Mastertex has been developed to meet a need which oil paints cannot meet because they cannot be applied successfully to wet surfaces. Moist, dripping surfaces are ideal for the application of this new material, which can be

painted directly on to fresh or moist stucco or on the leaking walls of basements, elevator pits, tanks, etc., where it stops the passage of moisture and at the same time provides a bright, attractive, cheerful wall finish. Two coats of Mastertex, waterproof paint, easily and economically applied to the interior surfaces of cellar walls, changes a damp, mouldy basement into an attractive, dry, healthful room—something which many owners now believe can be done only by a complicated process involving considerable time, money and material.

In hardening, Mastertex does not dry out to a chalky, dusty coat, as do many cement mixtures that have been tried for similar work. Provision is made to prevent evaporation of the water in the Mastertex until the solid elements have taken a hard, dustproof set like that of the best concrete. The Mastertex finish can be washed frequently; it does not wash or scrub off and does not rub off on the clothes.

Many cases have been found where cracked or spalled concrete was due to the corrosion of reinforcing metal. Such reinforcing to be most effective is placed near the surface of the concrete, thus, in many cases, exposing it to air and moisture which penetrates from the outside.

Mastertex has been developed to prevent just such corrosion and resulting damage. This is just another case where "Saving the surface will save all."

Number 12

Building and Engineering News—1900 To 1925

Twenty-five years ago—Building and Engineering News—an eight-page "infant" made its entry into the Building World—the offspring of a greater publication—Daily Pacific Builder—now in its thirty-fifth year.

To summarize the birth, growth and development of Building and Engineering News without incorporating a brief history of the pioneering of its companion publications would not be just to those who assisted in making them nor to those who have been advertisers, subscribers and readers since the first and up to the present issue.

Pacific Builder Established

During the year 1870 in the city of Portland, Oregon, the Pacific Builder made its first appearance as a monthly publication under the guidance of W. H. Purtell.

Success attended "Pacific Builder" from the start and in a brief space of time it was necessary to issue the publication as a weekly in which form it was continued for many years.

In 1885, the publisher concluded that a wider field existed for his publication in California and arrangements were perfected for moving the plant to San Francisco. This was accomplished without interruption in publication.

Success smiled upon the venture in California. The newcomer from Portland instantly sprang into popular favor and in order to supply an insistent demand the "Builder" was changed from a weekly to a daily publication.

Ownership Changes

However, due to poor health, the publisher was compelled to seek rest and in 1899 the ownership was transferred to G. A. Wright, San Francisco architect and L. A. Larsen. Mr. Wright undertook the work of the Editorial Department and Mr. Larsen assumed responsibility for the business and advertising end of the enterprise.

The pressure of architectural work, however, caused Mr. Wright to sever his connection with the publication and the entire ownership passed into the hands of his partner, Mr. Larsen, who had long contemplated a confidential daily construction news service covering the more important centers of the Pacific Coast.

Larsen Reports Established

Early in 1899 a demand for such a service was evident and the daily news report was launched under the name of the "Larsen Advance Construction Reports." Assisted by a capable reporterial force and with wide-awake correspondents in distant fields the service met with instant favor in the Pacific Coast section and Eastern points as well.

However, due to heavy financial expenditures in maintaining a staff of news-gatherers, long distance phone

Twenty-five years ago Building and Engineering News—then known as Building and Industrial News—an eight-page weekly—made its entry into the Building World.

For twenty-five years Building and Engineering News has held the pace in the "March of Progress" following the Architect, the Engineer, the Contractor and the Materialman, keeping one informed as to the activities of the other.

From an eight-page publication—Building and Engineering News—ever striving to meet the requirements of those engaged in the construction business, has grown from the eight-page field to a regular forty-two page weekly with the promise of an additional eight pages in the immediate future.

Features not incorporated in many of the leading construction journals of the United States have been added to its columns and preparations are being made for additional features which will place Building and Engineering News on a plane with the more important journals of its type throughout the country.

In an effort to build up a bigger and better publication—one worthy of the recognition of the building interests—arrangements are being completed whereby a more complete review of Pacific Coast construction activities will be published each week. Additional correspondents will be stationed at central points who will be constantly on the job to furnish up-to-the-minute data on all matters affecting the construction industry. These reports will be compiled on arrival for publication in the issue following their receipt. Reports will be timely, accurate and plentiful.

service, etc., it was found that a daily service would not be profitable to the publisher unless the information could be obtained in some way other than through one channel, thereby producing larger financial returns.

Birth of B-E News

It was at this period that Building and Engineering News (Building and Industrial News) was established. The publication was then—as is now—a complete weekly review of the Larsen Advance Construction Report service.

This weekly compilation of Pacific Coast construction projects, under one cover, proved what the construction interests desired and Building and Engineering News prospered.

With the death of Mr. L. A. Larsen, the publisher, in December, 1920, Building and Engineering News and its companion publications were taken over by his widow, who continued the business for three years when the ownership passed into the hands of the present owners, The Mercury Press.

Without a house to house canvass the growth and development of Building and Engineering News, both in size and circulation, has been steady. Additional features added to the columns from time to time and the covering of a larger territory has increased the working forces of the publication—and its companion publications—from some ten to sixty-five persons, these comprising the business and advertising departments, news-gathering and mechanical departments.

News Gathering System

Truly it is an easy task to keep informed as to the developments in the construction field when the information comes to one from the printed page. Few, if any, of our readers are aware of the tremendous task it is to follow construction information from the time the work is contemplated up to the time of completion.

Every effort is made to secure an early report. Newspapers from every section of the Pacific Coast are carefully checked and construction items clipped. These are turned over to the news department for confirmation and indexing and a preliminary report is sent out on the subject. A letter—or phone—if possible immediately follow in an effort to secure additional information together with details as to the progress of plans, the time bids are desired, etc., each following in order until a contract is let on the work.

Gathering such information commands an active news-gathering force working from twelve to sixteen hours a day. The daily newspaper, carrying in its columns anything from a murder to a comic strip and from the capture of a rum runner to a column or more of births, marriages and deaths—has a wide field to work from in order to fill space—but not so with the trade publication, and, particularly so with a construction journal.

News—reliable news—must be obtained. In the construction business—every item means money. In the general newspaper business—it is, more or less, a matter of information.

Filing Systems

Building and Engineering News after first securing a report on a project either via the newspaper or an interview with an architect, engineer, contractor or owner—prepares a file check which keeps the news department in constant touch with the prime mover of the job so that reports are given at each stage of the undertaking. These follow in order—contemplated or plans being prepared—bids wanted—bids opened—action on bids. Every

effort is made to follow each project in the stages named.

Service Pays

That service in Quantity and Quality pays is shown in the fact that Building and Engineering News is fast becoming the recognized construction publication in Northern California and is gradually making its way unsolicited through every section of the Pacific Coast.

During its pioneering and in later years the following publications were absorbed by Building and Engineering News: The California Architect, The Industrial News of Alameda County, The Builder and Contractor, The Industrial News and The Western Builder.

Co-Operation Desired

Building and Engineering News is ever striving to make a bigger and better publication for the construction interests. The publishers hope to issue

a journal meeting with the approval of every branch of the construction industry.

Hence, it is requested that architects, engineers and contractors co-operate and advise when they are preparing plans for a project, when bids are desired or a contract awarded. With such co-operation Building and Engineering News can issue a publication not only meeting with the approval of Pacific Coast interests but to those throughout the entire United States as well.

Brevities of Twenty-five Years Ago

FROM B. & E. NEWS FILES OF 25 YEARS AGO

Building statistics are the best evidence of a city's prosperity. San Francisco building operations from 1888 to 1899, according to year, follow:

1888	\$7,454,325
1889	8,100,254
1890	9,867,845
1891	9,799,800
1892	5,740,353
1893	5,528,537
1894	4,760,000
1895	6,382,768
1896	5,437,184
1897	4,205,699
1898	3,225,738
1899	4,142,404

The Builders' Association, 318 Bush street, San Francisco, elected the following officers: President, C. P. Moore, vice-president, Charles A. Day; recording secretary, Charles M. Lindsay; financial secretary, G. G. Gillespie; treasurer, F. W. Kern; executive committee, Valentine Franz, Wm. Horst-meyer, F. H. Masow, J. D. Hannah, J. E. Mallory, A. Guilbert and Carl Kreeker.

The Briggs Building, Thirteenth and Clay streets, Oakland, is undergoing construction from plans of Architect D. F. Oliver. The first story is of steel construction with cast iron front and the second and third stories of brick. The cost is \$8,153.

Architect Cahill's scheme for beautifying Market street and opening up on to that thoroughfare both the City Hall and Post Office was meeting with "universal approval and ever growing endorsement that such an original and ingenious scheme deserves."

A "handsome" public school, containing 8-classrooms was completed at Fruitvale, at a cost of \$11,000.

Foresters Lodge of Stockton plans construction of a lodge building. Will be three stories, 41 by 100 feet, costing \$20,000.

Architect Emil Schacht (Portland, Ore.), has had a very successful year and will begin the new year with considerable work in prospect.

Architect J. W. Krause (Los Angeles) has prepared plans for extensive alterations and additions to the building formerly occupied by the Blackstone Department Store.

Inland Telephone Company will erect an \$80,000 business building in Spokane, Wash.

W. W. Worden of the firm of Clinton E. Worden Co., manufacturing druggists of San Francisco, completed a \$17,000 residence in Oakland. Architect D. F. Oliver of Oakland designed the building.

A. S. Fox intends to erect a \$5,000 house at Colton, Calif., soon.

Radkin & Kamp of Fresno are talking of adding another story to their block.

Seattle building permits for the year 1899 total \$1,315,000 as compared with \$824,330 in 1898. Substantial business blocks and residences were features of the year's operations.

The San Francisco Builders' Exchange installed the following officers: President, S. H. Kent; vice-president, D. McPhee; secretary, Jas. A. Wilson; treasurer, E. B. Hinds; directors, T. Elam, Thos. Butcher, E. L. Snell, T. McLachlan, Tim Sullivan, G. V. Daniels and J. R. Tobin.

Reigle & Jamison announce they have become members of the Builders' Association and Builders' Exchange.

Los Angeles building operations for year 1899 total 1,705 permits for improvements valued at \$2,137,887.

The Moreland Notre Dame Academy at Watsonville was completed from plans of Architect W. H. Weeks.

One of the most important improvements projected this year is the \$40,000 mansion for the Governor of the State.

The Public Library trustees of Pasadena vote to erect a new library building at cost \$5,000.

The Sonoma County Grand Jury recommends erection of modern jail building in Santa Rosa.

Contractors Kilder & Cooper erected at \$4,600 eleven-room residence on Benvenue Ave., Berkeley, Cal., "the style of architecture adopted being the Dutch."

Construction has been started on the new hall of justice at San Francisco. The building is being erected under a statute passed by the last Legislature and "is an imposing and up-to-date

structure." Shea & Shea, "the distinguished architects," designed the building. Batman Brothers have the general contract.

Fresno county enjoying an active building season. Home building leads all construction.

James McCudden of Vallejo completes three modern residences in York street, Vallejo, Cal.

Mons. E. Bernard of Paris, France, arrived in San Francisco to prepare plans for the new University of California Buildings at Berkeley, he being selected as the result of a competition held in which architects of the world took part. Mrs. Phebe A. Hearst provided funds for the architectural plan. Judges in the competition were: J. B. Reinstein, John Belcher, Walter Cook, J. L. Pascal and Paul Wallot.

Los Angeles experienced quite a boom in engine houses during the year, improvements which were much needed.

OUR ADVERTISERS OF TWENTY-FIVE YEARS AGO

In looking over the year 1900 issues of Building and Engineering News one begins to wonder what has become of all the old timers in the construction field. While many of them are still in the running others have slipped quietly into the by-ways of the highway of progress.

Among the more important construction firms and supply houses carrying advertisements in Building & Engineering News in its infancy, we mention: Grant & Co., asbestos goods; San Francisco Cornice Works; West Coast Wire & Iron Works; Empire Plaster Co.; Brode & Clark Iron Works; Western Iron Works; Pacific Refining & Roofing Co.; A Knowles (plasterer); B. S. Cartwright, (teaming); King Planning Mill; C. A. Wright (building quantities, valuations and arbitrations); Paraffine Paint Co.; Ingerson & Glaser, (art glass); A. W. Pike, (slate and tile products); California Duplex Window Co.; Sperry Wire & Iron Works; Smith & Young, (building specialties); Henry Gervais (marble-mosaic); T. N. Furlong (cement wash trays); G. Rischmuller, (door openers); Allen and Looney, (plumbers); W. Morgan & Co., (heating, ventilating and sanitary engineers); Nonpareil, (Instantaneous Water Heater Co.); Terrill Bros. & Co., (tile); Chas. J. Waterhouse, (building materials); Taylor & Koelzer, (machine and bush whitewashing); Western Wire Works; Braida & Pasquali, (mosaics); Townley Bros., (mill work); B. Johnson, (grilles and fret work); Lowry & Daly (art tile and mantels),

E. J. CARDINAL
Publisher

The home of Building and Engineering News is located one block south of Market street, on Mission street—San Francisco's second main artery—which is the fastest growing thoroughfare in the city. Within one block of the B. & E. News plant is located the site of the proposed \$1,000,000 home of the San Francisco Builders' Exchange.

STAFF

of

Building and Engineering News

The above picture shows the home of Building and Engineering News and its companion publications. The day operating forces comprising the office, news and mechanical departments are also shown. Night forces and out-of-town correspondents are not included in the group.

J. I. STARK
Publisher

Immediately joining the home of Building and Engineering News on the East, the San Francisco Bulletin has started construction of a \$750,000 plant and within 200 yards West is located the home of the San Francisco Chronicle—the latest and most modern newspaper plant in the world.

The San Francisco Builders' Exchange

By S. A. Schenck, Assistant Secretary.

The Builders' Exchange, while incorporated in July of 1890, had its date from the early history of our State, at which time buildings were erected by men who undertook the whole structure from basement to roof, but gradually as the science of construction progressed, the specialist began to take his place and the crafts were introduced, as the carpenter, the mason, the plasterer, the plumber, the painter, etc., and gradually came into their own.

These different groups of the great building fraternity established their headquarters at various locations, which condition prevailed for a time. Finally in June of 1890 it was decided to gather all of the elements of the building into one body, called The Builders' Exchange, where the architect, the owner, the prospective builder and the material man could meet and interview the contractors of the various departments of construction, at a given time, avoiding the loss of time occasioned by having to visit their various headquarters, this leading to a group of men meeting, presided over by W. Miller as chairman, with C. C. Terrill, secretary, who nominated and elected the first Board of Directors of The Builders' Exchange, which was incorporated on the 5th day of July, 1890 with headquarters at 330 Pine St., having for its first Board of Directors: President, C. C. Terrill, (carpenter); Vice Pres., W. N. Miller, (millman); Secretary, M. J. Donovan, (painter); Treasurer, A. M. Starbird, (lumber); Directors, Jas. R. Wilcox (carpenter), J. F. Riley (mason and builder), J. K. Firth (steel construction), C. C. Morehouse (plasterer), A. Hosmer (cut stone), Wm. Cronan (sheet metal).

The Builders' Exchange prospered having fulfilled its purpose and grew in numbers until a change was made to 314 Montgomery St., occupying the second floor of that building. But still the quarters were found too small and the Exchange moved and occupied the entire ground floor of 16 Post St., remaining there until a new building was erected at Mission and New Montgomery Streets. Leaving here for the Fire House building at 108-110 Jessie St., a building of three stories and basement all occupied by the Exchange, where we continued our growth and activities until April 18, 1906 when 400 strong we found ourselves without a home, as were many thousands more.

Within two or three days a store was found on Divisadero Street, where open office was held until a site was located for a temporary building erected at 221 Oak St. Here we took a leading

part in the rebuilding of our city, while doing so, finding time to secure a location and erecting a building between Jessie and Stevenson St. east of Third, with the Exchange on Jessie St. and a three-story and basement building on Stevenson Street, containing 68 offices and four stores. Here we have remained for the last 18 years or since 1907, with many ups and downs, with plenty of work and also taking our part in the responsibilities of our country, state and city, but with all finding a little time to play, in our annual banquets, our smokers and builders out-

But new members and new responsibilities continue presenting themselves and the members are welcomed and the responsibilities accepted and met as they come, so when in 1920 and 1921 the fact presented itself that for the sake of our Country, our State and City and our Citizens we must do something to combat conditions that had become unbearable, The Builders' Exchange in conjunction with a great group of public spirited men and women launched the American Plan, which is defined by our late co-worker and leader, Max Kuhl, as follows: "The

American Plan is the working side by side of union and non-union men, and in the event the union men will not work with the non-union men, then the employment of non-union men only."

After a hard and bitter struggle of many months with loss of time and money by the group of faithful men and women who carried the brunt of the great endeavor from the early part of 1921 even to the present time, it has at last been made possible for the American citizen to work at his chosen trade, if he will, irrespective of any affiliation and for the contractor and owner to duct their affairs with a fair amount of confidence in the outcome and all praise is due the faithful and public spirited men and women in and out of The Builders' Exchange and the earnest efforts of our officers, who have not hesitated to share their time, money and intellects for a principle.

And now as we plan and prepare for a permanent home, we feel

the promise of the years that have passed, even though it still spells self-denial and loyalty, we know these are ours and we will triumph.

Some years ago we took part in organizing a State wide Builders' Exchange, of which J. D. McGilvray, our President at that time, was the first President, and now we congratulate ourselves that under the present Board of Directors of our Builders' Exchange, a Board of Directors which has piloted us through the last strenuous years of our history, viz: President, W. H. George; First Vice President, Emil H. Gberg; Second Vice President, D. J. Sullivan; Third Vice President, James H. Finkerton; Secretary, R. J. Forbes; Treasurer, Alexander Mennie; Directors: J. D. McGilvray, C. G. Berg, Jas. B. Keenan, Chas. W. Gompertz, Geo. L. Brown.

We have purchased and own a property at Fifth and Minna Streets, 75 feet on Fifth Street and 263 feet on Minna Street, one-half block from the United States Mint.

But in all these growths, we must not forget the many loyal men who have stood shoulder to shoulder through thick and thin with The Builders' Exchange and have now answered the call and enrolled on the records of "The Great Master Builder".

Wm. H. George, President, San Francisco Builders' Exchange

San Francisco Under the American Plan

The American Plan came into existence in San Francisco in 1921 as the result of a strike instituted by the building trades unions against the award of a board of arbitration which the unions had joined in selecting and whose decision they had agreed in writing to accept. This strike ended by the union men voting in defiance of the advice of their leaders to return to work under the American Plan in September of 1921. Thus the American Plan has been in full force and effect in the building trades in San Francisco for a little more than three years. It is well, therefore, to cast up a balance and see just what has been accomplished in that time.

Building Increases

The growth and prosperity of a city are indicated largely by its record in building. For the year 1920, which was the year just preceding the city-wide building trades strike and the institution of the American Plan, building permits amounted to \$26,729,992. For 1921 when union conditions still prevailed up to about September 1st, building permits totaled \$22,244,672. In 1922, which was the first full year during which American Plan conditions obtained in the building industry, building permits increased something like 85% or to \$45,327,206. The year 1923 showed an increase over these figures of considerably more than a million dollars. In 1924, which is San Francisco's banner year—exceeding even 1907, the permits amounted to the splendid total of \$57,852,973.

The yearly record of building permits issued in San Francisco from 1906 to date, is as follows:

1906 (Part of year union conditions)	\$34,947,386.
1907 Union Conditions	\$56,578,844
1908 " "	31,663,341
1909 " "	26,154,068
1910 " "	20,508,556
1911 " "	20,915,474

Labor Strikes Costly

Labor strikes are costly to the whole community, not merely to the particular industry involved. The United States Bureau of Labor Statistics reports 8,951 strikes in the United States for the eight years from 1916 to 1924. This government bureau estimated that on a conservative basis, these strikes had caused a total loss in dollars and cents to the workers, employers and to the public of over twelve and one-half billion dollars. This, according to the Bureau, is equal to two-thirds of all the savings deposits in the United States banks and is more than one-half of the whole public debt of the United States, including war issues. In 1923 there were over 700 strikes in the United States, with a total loss estimated at \$703,000,000. In this same year there were 46 strikes reported in California. Only 5 of these occurred in San Francisco and they were of short duration and all resulted in the establishment

By Albert E. Boynton, Managing Director, Industrial Association of San Francisco

of the American Plan. In the year 1921, the closed union shop prevailed largely in San Francisco during the first eight months. In that year there were 22 strikes reported involving 12,000 men at an estimated loss to the public of \$22,500,000. In 1922 there were 11 strikes involving 1530 men, with an estimated loss of \$5,375,000. In 1923 the number of strikes had been reduced to 5, involving an estimated loss of \$2,490,000. In 1924 there were only 4 small strikes involving some 340 men with an estimated loss to the workers, employers and the public, of only \$68,000.00.

Labor Domination

It is interesting to recall that for 50 years prior to 1921, in fact from the days when Dennis Kearny held forth on the sand lots of San Francisco, against the encroachments of the Chinese, the community was under the absolute domination, industrially, and often politically, of organized labor. During only a comparatively brief period in the early nineties was this domination even partially thrown off. By 1900, ground which the unions had lost in the previous decade had been entirely recovered and from that time on through the next 20 years, there was a steadily increasing sense of power among the trade-union leaders, and a steadily enlarging field of activity. During the course of the war, because of the highly intrenched position in which labor found itself, every advantage was taken of the shortage of man-power, with the result that at the close of the war conditions in all lines of industrial endeavor had become almost intolerable.

A brief resume of conditions existing in San Francisco for the quarter century preceding the establishment of the Industrial Association and the institution of the American Plan is as follows:

None but the son of the journeyman plumber could be apprenticed to the plumbing trade, and for fifteen years only fifteen apprentices had been admitted to the business. No doors, sash, or mill work of any kind could be erected in San Francisco unless it bore the union stamp, which meant that any equally good product manufactured under open-shop conditions in the northwest could not be used in San Francisco unless it was "dummiied" through the mill. That is, unless each piece was put through the same motions and machinery that it would have to have been put through in the first place had the job been manufactured in San Francisco.

Business Agent's Decree

The hod carriers claimed that no materials relating to their craft, which included rock, sand, gravel, lime, plaster, cement, brick, tile, terra cotta, etc., could be moved from delivery trucks into buildings under construction except by members of their own organization. This rule was rigidly enforced even though hod carriers were unavailable; and materials had to lie for a considerable length of time exposed to the weather. On one occasion a load of building tile was delivered to a building under construction and unloaded in the street adjacent to the job. This street was also occupied by car tracks, and, under local ordinances, the tile had to be

more than three feet from the track. This ordinance was not observed by the company delivering the material, and it was necessary to move the tile into the building. A large corps of laborers were working on the job on Saturday afternoon (a time at which hod carriers refused to work under any circumstances whatsoever) and these men were employed to move the tile into the building. On Monday morning when the hod carriers came back to work and discovered the situation, they refused to move one pound of material of any sort, or to carry a single brick or hod of mortar, until their business agent had had an opportunity to visit to the job. The business agent decreed that all of the material must be returned to the street by members of his organization and it must then be again carried to the several locations in the building at which it was then reposing.

Housesmiths would not permit reinforced iron to be bent by machinery but required that it all be done by hand. Members of other crafts were not permitted to break a hole through the brick or the partition wall for the passage of pipes, ducts, or conduits. A bricklayer must be called for this work even though it might only require the labor of a man for half an hour, and any man called for such a job had to be paid a full half day for his work. The number of outlets which an electrician could install, while not definitely specified by rule, was understood and rigidly adhered to.

A similar situation prevailed in regard to the number of barrels of lime that a hod carrier would slake, or the number of bricks that a bricklayer would lay. Certain materials were entirely under the ban because of the fact that they expedited the performance of work. Plumbers had to report the number of fixtures that they installed per day, and the estimated time to finish any job upon which they were employed; and they were fined in case they required less time than that originally set out in the reports which they made to the business agent.

Costly Plumbing

Costly methods of plumbing installation were insisted on by the business agent in order to increase the length of jobs. No master plumber was permitted on any of his jobs for more than two hours in any one day, and the procedure for carrying on the work was generally laid down by the business agent.

Painters were not allowed to use brushes of more than a certain width even for the painting of roofs. Roofers were not permitted to get on the job one minute before eight o'clock even though it required from fifteen to twenty-five minutes to prepare the tar roofing, with the consequent delay on the job. No master plumber was permitted to so much as touch the tools of his trade, nor were apprentices permitted to use a journeyman's tools until after they had put in some two years on their apprentice period.

While the rules here cited do not in any sense pretend to exhaust the almost endless list of arrogant, senseless, and uneconomic regulations imposed by the unions, they do give a fair impression of the situation that prevailed.

And now after three years what position does San Francisco find itself in? It finds none of these rules in effect. It finds itself entirely freed from any sort of union domination so far as the building trades are concerned. Today

for the first time the employer is free to conduct his building operations as he believes they should be conducted with the result as has already been set forth that San Francisco has gone through the greatest period of building prosperity in its history. The most complicated and costliest work that has ever been put up in the community has been erected under strictly American Plan conditions and this stands today as living proof of the absurdity of the pretension that it was impossible to erect first-class buildings without employing union mechanics.

Association's Accomplishments

Furthermore, the Industrial Association has:

1. Provided impartial machinery for establishing wages in building trades, and enforcement of wages thus established.

2. Maintained free trade schools for plasterers, plumbers, painters, paperhangers, bricklayers, tailors, molders, tilsetters and house-smiths; from which have been graduated some 1,000 apprentices and in which approximately 700 are still taking training.

3. Effectuated American Plan in whole or in part in the following industries (in addition to the building industry): Lithographic, cigar, shoe, garment, taxicab, metal, warehouse, glass, lumber, hotel and restaurant and candy. (Furthermore the Industrial Association has assisted materially in maintaining the American Plan in the following other industries: Longshoremen—all steamers both river and ocean-going — street railway, metal trades, and shipyards).

4. Effectuated a plan of employee insurance by means of which it has been possible for the first time to offer to building trades workers group insurance at rates 60 to 80% less than ordinary insurance could be purchased, and under which thousands of building trades workers have secured policies covering death and total disability.

5. Established a safety service to supplement safety inspection by the State and Municipality; to the end that the hazards of industry may be reduced to the smallest possible minimum.

6. Maintained a free employment bureau which has placed more than 25,000 men and furnished help in all

lines with no expense either to employer or employees.

7. Effectuated a comprehensive improvement program for foundry operation, so that American Plan foundries are rapidly becoming superior to any others on the Pacific Coast, and up to standard of best foundries in the United States, and are thereby securing work heretofore done elsewhere on the Pacific Coast and in the East.

8. Settled numerous incipient controversies which might otherwise have led to serious industrial strife.

9. Protected the workers' interests, and co-operated with workers by adjusting their grievances, by preventing any discrimination between union and non-union men; and by absolutely enforcing the eight hour day, good wages and decent working conditions.

10. Protected the public interest so thoroughly that while building permits have steadily increased and the entire community has prospered greatly and progressed rapidly, strikes have been almost wholly eliminated.

This in brief is the record of the constructive accomplishments which the American Plan has made possible in San Francisco.

Apprentices at Work in Painting and Paperhanging School Established by Industrial Association of San Francisco.

Students Learning Ornamental Work in Plasterers' School Established by San Francisco Industrial Association.

A Group of Apprentices in the Plumber's School Established by Industrial Association of San Francisco.

Arguments for Licensing of Building Contractors

That protection of the public against unscrupulous, dishonest, inefficient and careless persons must necessarily be a primary consideration is unquestioned.

Efforts of the State to give to the public this protection have brought about a supervision of private industry that to many seems extreme. It is generally admitted, however, that in most instances some supervision or control is essential.

The necessity for state control in the practice of medicine, pharmacy, dentistry, law, architecture and engineering; of banks and the sale of securities, and of the many other branches over which the state has extended its supervision is unquestioned by any who have given the matter thought.

There have been no acts passed by the Illinois legislature that would have been productive of greater good than those for the control of architecture and engineering, had legislators gone one step further and enacted some statutes for the control of the builder. As the matter now stands, the protection is incomplete and largely fails of its purpose.

The registration of architects and engineers leaves no question that the legislature is alive to the hazardous nature of a building operation and recognizes its public character.

The Mechanics' Lien Law, the Workman's Compensation Act, and the many precautionary measures for the protection of the workman and the public which are left for enforcement to the State Factory Inspector, are further evidence that our lawmakers realize the perilous and unusual character of a building operation.

Omit Taking One Essential Fundamental Precaution

The various building codes and sanitary measures give further assurance that every effort is being made to safeguard the public health and welfare, but the one great fundamental protection to which the public, the workman, the future occupant of the building, the investor, and the seller of materials are entitled, is the control of those who practice the art of building by a License Board created by the State, a License Board with powers so broad that it could demand of anyone desiring to engage in the practice of building that he give satisfactory evidence of his ability to practice the art in the best and most efficient manner; a Board with the power of revocation of licenses.

Since the license law for builders was first discussed in Illinois, new factors have had an influence in forcing action. Most important of these was the Volstead Act. Various municipalities, however, have sought new ways to secure an income. Therefore, it seems that the question which faces us today is no longer—"Do we want to be licensed?" Rather the question is—"What kind of law will best protect the legitimate builder, the building public, and the industry generally?"

The registration of architects and engineers assures the public that the codes will be adhered to so far as the design of structure is concerned, and that the architecture and engineering will be sane and safe; but the execution of the design is still in the hands of an unregistered builder, who has never been required to give evidence of

By Oscar W. Rosenthal, Director at Large, Associated Building Contractors of Illinois

his ability to carry on successfully so dangerous and important and so public an undertaking.

Enforcement of the various codes covering a building operation must of necessity be perfunctory and left largely to the honor of the builder when building is at its height. When an infraction of the code is discovered, the work is stopped temporarily or the correction is ordered. The penalties are absolutely insufficient. The architect and the engineer do not necessarily supervise the execution of the design. The responsibility resting upon the builder is one that should be placed upon the shoulders of those who have given evidence of the necessary ability, and who are under State control.

Builder Should Be Responsible to the State

There is expressed everywhere throughout our statutes the feeling that control of building is regarded as of extreme importance. Yet the efforts to control, as evidenced by the various building and sanitary codes, the Mechanics' Lien Law, the Workman's Compensation Act, the architects and engineers registration acts, and the various safety measures, fail to complete potency so long as the builder (the one who carries on the actual construction of the building) is not directly answerable to the State.

The economic waste and the loss of life due to incompetence, inefficiency and lack of moral responsibility would be surprising, could the facts be known.

Factors of safety employed by architects and engineers, based of course largely upon experience, are not dependent entirely upon the uncertainty of materials and the natural carelessness of the craftsman, but also upon the inefficiency, the lack of even reasonable, to say nothing of thorough, supervision or knowledge on the part of the builder. What seems to be an excessive cost of liability insurance and contractors' bonds also is due largely to these conditions.

Public welfare demands that fraud and collusion practiced in connection with building operations be stopped, and this can be done only through State control.

There are many engaged in building who are wholly unequipped by experience, temperament, or a sense of moral responsibility for so dangerous and difficult a profession. To permit others to engage in the practice without making an effort to ascertain their fitness would indeed be a mistake.

We are at the present time facing a most unusual situation as regards the unprecedented developments of building. The neglecting of building operations in the past has made necessary several years of intense activity on the part of the construction industry. Today, because every competent builder is at work, the public stands the more unprotected from the designs of any ignorant, incompetent, inefficient, irresponsible or dishonest person who desires to pass himself off as a builder.

Present Law Requires No Qualifications

It is almost unbelievable that anyone without previous experience can engage in so dangerous a profes-

sion and be unanswerable to anyone. Under our present laws, one can be a doctor, lawyer, a butcher or a baker today and a builder tomorrow—for no reason other than that he so wills it—with no previous experience, without control and without regard to the interests of the public. This is not a healthy condition, and should not be permitted.

Honest builders of this State should be in favor of any legislation that will eliminate the unscrupulous builder who evades the building codes, and in many other ways conspires to defraud the public, with no regard for the dangers of such a practice.

Consequent to the establishment of such a board will be a great moral awakening in the building profession. A better understanding of the duties and obligations of those engaged in the practice will result. The tendency of many builders to put up the building at a profit, regardless, will be greatly lessened. It will cause to be established a code of ethics and will compel obedience. It will bring about a regular recognition of the real standards of the profession; and the public, the workman, the architect, the engineer and the seller of materials will be reassured when it is known that the art of building is in the hands of competent builders who are under the control of a State Board which has power to enforce its rulings.

The establishment of such a board is a public necessity.

"IT TAKES THE IRISH"

Patrick McGovern, New York contractor, has been awarded the contract for construction work on the second section of the Broad street (Philadelphia) subway at an outside cost limit of \$14,300,000. It took only four days to wind up the contract.

In 1891 McGovern arrived in Boston from County Cavan, Ireland, a "greenhorn" with only a few dollars in his pockets. He was what was called a "fine broth of a boy, a magnificent physical specimen and able to 'lick his weight in wildcats.'"

He took a job swinging a pick and shovel, this being the handiest thing to do at that time.

Filled with the spirit of adventure, young McGovern started for Alaska in 1894 in quest of gold. He did not locate any great treasure, but had some wonderful experiences, which satisfied his love for life in the open and taught him the great lesson of self-dependence.

Returning to Boston, McGovern set up business in a small way. His office and headquarters was a small tool shed with an oil lamp.

Today he has a magnificent suite of offices on the top floor of a towering office building overlooking the city and many of its great public works, which he has had a hand in carving out. Visible from these windows is the stretch of the Rockaway causeway, a gleaming ribbon of cement.

The contractor who originally undertook the causeway job sunk a cold million dollars and then gave it up. The obstacles were too great to overcome.

Dull Times Show the Value of Advertising

There is no greater danger to an industry than to ride on the tide of prosperity. There will be a calm. In that case it can do little else than remain stationary. Unless the industry can thrive under adverse conditions, it cannot endure in a healthy state. There must be a momentum behind it that pushes it ahead even during a calm.

The old sea captain solved the problem of getting through a calm in a most natural way — by putting out more sail. If some of our industries would follow his example, dull seasons and hard times would not be so noticeable. Their method of putting out more sail would be in the form of sales promotion and advertising. To be prosperous when times are good is no small accomplishment, but to be prosperous when times are bad is quite an achievement. A vigorous advertising and sales promotion program will stabilize an industry and will work up in it a positive inertia which carries the industry forward at an ever-increasing speed, even through a dull period, in the same way that a windmill keeps on turning after the wind has momentarily died down.

Sales Promotion Campaign

For an industry to carry on a sales promotion campaign just before it enters into a slump is very prudent, especially if it is continued through the dull period, for when the slump is on, the industry is in a better position to command the market, and when prosperity again sets in, it is in still better position by reason of having a head start.

The year 1921 furnished an excellent example of a business calm. Business was practically at a standstill, mills were shut down, production was curtailed, large stocks were unsold, inventories were high, spirits were low. In short, those were the dog-days.

They were the dog-days, however, only to those who permitted them to be. Some industries followed the example of the old sea captain and put out more sail. Their business forged ahead as though nothing had happened. Many thought this procedure would be ruinous and would prove to be a case of throwing good money after bad. Some manufacturers followed the tactics of the old seaman and profited accordingly. Some were prevented by lack of finances. Others preferred to let things take their course, hoping that some good fairy would lend a helping hand.

Let us consider how these various conditions acted with regard to building materials. From 1917 to 1921 there was a deplorable slump in building operations, with a temporary respite toward the end of 1919. The sale of building materials continued to diminish in the same proportion as building abated. There were a few exceptions, however. It is indeed a surprise to find that while the building industry was suffering adversity, two or three products not only held their own, but actually increased in sale. Conditions like this do not occur accidentally and without cause.

Accompanying this article is a chart showing the activities of several of the important materials used in building. Taking 1919 as a starting point, because it was the first year of domestic consumption after the war, and because towards the end of that year building operations approached near-

By Wharton Clay, Commissioner, Associated Metal Lath Manufacturers, Chicago, Ill.

est to normal, we find that the curves of most products are on the upward grade, with the exception of face brick. During the next year, when the slump was resumed and while other products were decidedly affected and were on the down-grade, bathroom tile and face brick were actually increasing in sales and Portland cement was not affected.

Advertised Products Sell

Then in 1922 and 1923, when building recommenced, the curves of these same three materials, with the addition of metal lath, shot upward in a more pronounced fashion than other materials. After due reflection and considering all the facts, this course of events is neither miraculous or unna-

Cement Assn. Advertising

Portland cement, considering that it is a basic commodity similar to lumber, and would therefore be greatly affected by the fluctuations of building operations, proved the best example of the benefits of trade association advertising. Ordinarily, if left alone, the sales of this product would have dropped in the same proportion as lumber, but because of its vigorous promotion by the Portland Cement Association, sales were kept from slumping. What the Portland Cement Association has accomplished is a tribute to the product. It is no wonder that the Portland cement industry, as well as other successful industries, continues to appropriate large sums for the purpose of putting out more sail to the wind.

The American Face Brick Association also has a very remarkable record. With an advertising appropriation of \$125,000 a year, the industry has

The Products Whose Sales We nt Up Fastest Were Advertised.

tural. The cause is simply this—the manufacturers of these materials merely threw out more sail during the calm and stuck to the wheel. They had previously inaugurated aggressive advertising campaigns, and continued them through the dull period. Consequently their respective industries were being carried forward by the stored-up force and inertia generated by the advertising and sales promotion campaign.

They had refused to let conditions delay their progress. Instead of waiting for business to get better, they redoubled their efforts and made it better. The Portland Cement Association, the Face Brick Association and the Associated Tile Manufacturers performed wonders for their particular branches of the building industry. Excellent promotional work and increased advertising brought increased sales. This increase was by no means temporary, as the cumulative effect of their promotional work figured considerably in harvesting sales in an ever-increasing proportion after prosperity again set in.

shown an increase of production from four per cent below the 1913 level to seventy per cent above this level. Although the increase in consumption may be due to the increased building after the war period, much of the credit should be given to the publicity by the association. It has been demonstrated that in many communities the building of brick houses has been increased from 100 to 200 per cent.

Assn. Promotional Work

Of particular interest is the amazing progress of metal lath. The increased sale of this product is another example of the increasing demand for better construction, but unlike the associations mentioned above, the Associated Metal Lath Manufacturers have no definite advertising program. This kind of work is done principally by the member companies. The work of the association is of a promotional and research character. It gathers data and statistics, inaugurates tests, and in general offers material to the member companies for advertising and selling purposes. Another important function

of this association is following up building codes throughout the country, for the purpose of incorporating metal lath. Thus with a small organization and a small budget, it must be given a great deal of credit for the wonderful results shown thus far.

Trade Assn. Advertising

The advantages of trade association advertising is clearly demonstrated in the case of the common brick industry. Their own words are more expressive in this connection than any we can think of:

"It is no secret that the common brick manufacturer stood just about

knee-deep in the mud of his clay banks at the time we began advertising. He has at least climbed out onto dry land, polished his shoes and put on a collar and a cravat, and is beginning to sneak up into the front line of American business men."

The manufacturers admit that it is the wonderful stimulus they received from merely seeing "the name of common brick printed in high and expensive places" that enabled them to go after business in a more aggressive fashion. This is one lesson that has been given us by an industry that has sunk from the heights of prosperity to the depths of negligence, and is now climbing higher and higher by honest

and clear-sighted endeavor toward that position in which it rightfully belongs.

The idea that business and prosperity cannot be regulated is unfounded. In many cases the so-called bad times are merely a condition of the mind. Business men strong enough to overcome this weakness are assured of success. It has been demonstrated that with the employment of proper sales and advertising policies conditions can be regulated to work to the best advantage. Perhaps it would be better for all concerned if more of our industries would follow the example of the old sea captain and put more sail to the wind.

MEDICO-DENTAL BUILDING, SAN FRANCISCO

George W. Kelham, Architect. Wm. G. Merchant, Associate.
Geo. Wagner, Inc., General Contractor.

A fifteen-story and basement Class A structure recently completed at the northeast corner of Post and Mason streets at a cost in excess of one million dollars. This building will be occupied entirely by doctors and dentists. The new home for San Francisco Lodge, Benevolent and Protective Order of Elks, No. 63, now nearing completion, is shown on the right.

Definite and Permanent System of Finance for Highways Needed for Economic Results

By R. M. MORTON
State Highway Engineer

Reasons for budgeting State highway funds are not essentially different from those that govern similar practices in any modern business. The budget is simply a well thought out plan which takes into consideration the work to be done and the means at hand for its accomplishment. It paves the way for systematic and efficient progress.

Some eighty millions of construction funds have been expended to date upon the California State highway system. Several times this sum will be spent in the future before the work is completed, and after preliminary construction is finished, maintenance and reconstruction will have to be financed. The proposal that this great expenditure be placed on an annual budget basis is merely an attempt to get it on a business basis, to carry it forward as efficiently and economically as possible.

No private enterprise involving expenditures of such magnitude could succeed without a definite plan; and the fact that the public credit of the State of California is back of the highway building is no reason why it should be carried on other than as a highly efficient business.

Highway Organization Cannot Disband

Such a plan might not have been possible in the beginning of State construction under the first bond issues. The people at that time looked upon the highway work as something that would be accomplished in a few years, to be followed by the disbanding of the highway organization.

Today the viewpoint is changed. The people realize that maintenance and reconstruction must go on indefinitely; and they are beginning to understand that completion of the designated highway system means many years of construction activity. It is becoming evident that a steady annual building program will complete the work and more smoothly than a spasmodic hit-and-miss policy which expends large sums one year and nothing the next.

Traffic Census Gives Intelligent Basis

The maintenance department, during 1924, counted traffic on the state system, at regular intervals, and these counts will be continued in the future. We now have reliable information as to the amount of traffic on the various sections of state highway.

This information is invaluable in many ways. We are studying it carefully prior to allotment of maintenance and reconstruction funds; with other factors it should be taken into consideration in planning a program for primary construction. A traffic count is a better and fairer way to support a highway budget than to have the citizenship believe that locations of expenditure have been determined by political expediency, or by any other of the numerous ways in which the public business is influenced.

It is only natural that every citizen should want his particular road built first and should feel it to be more important than construction in some other part of the state; to him it is more important. But there is a chance to satisfy him, if the commission is in a position to say:

"We are assured of a minimum income of so much annually in the future. Here is our budget, we believe it

is the fairest plan for the extension of the highway system. We plan to build year after year at such and such a time. We will make the surveys next year and the year after we will begin construction."

If the citizen knows the funds are coming in, he should rely on the state-

R. M. Morton.

ments of the commission. He will feel better about the matter than to be promised his road and then not get it. Bonds are voted and the commission temporarily has plenty of money; promises for construction are made right and left. The money runs out sooner than expected and the roads are not built. The result is a disgruntled public opinion and a loss of confidence in the department.

There is another very important reason why an annual income is desirable, and that is the effect upon the engineering and construction forces. An organization which is built up one year and decreased the next can never be as effective or efficient as a continuous one that improves with the experience of the years.

Costs Are Cut

When the work can be planned for a reasonable period in advance, the engineering staff will have about the same personnel from year to year. There will be less lost motion, there always will be something for the men to do. The work will be so planned that there will be no lay-offs between jobs and the same number of men will accomplish more in less time than under the present system.

Another factor which may properly be taken into account when considering an annual budget for the state highway department is the contract organization. The great bulk of the highway work, as it should be, is done

by contract. The state is interested in having well trained and financed highway builders in the contracting field. Contractors go where they can get work to do. They will remain in California to insure competitive bidding when assured a reasonable amount of work will be advertised each year.

Two Hundred Million Needed

On 3700 miles of the present California highway system construction of one kind or another must be done at a cost of at least \$200,000,000, if the state builds roads of the standard the people are demanding. To finish this work will require certainly ten, maybe twenty or more years.

In considering the amount of annual funds which should be provided for this purpose, the important question is not how much the present organization can spend efficiently, for the organization can be framed to fit the finances. The important question is, how soon do the people of California desire the highway system to be completed?

Road building has become so much a part of the life of every community, and the demands for highway continue to be so great that to properly meet these conditions, the highway organization should be placed on a permanent revenue basis.

Keep Promises To People

The essential need of the present situation is a sound basis of financing whereby there can be budgeted in advance the various highway projects to be undertaken each year. Under such a plan the highway commission can outline a definite program and follow it with assurance funds will be on hand to keep the promises made the people.

We know that such a plan would result in a more efficient and economical expenditure of public funds and there is every reason to believe that it would be received with much greater public satisfaction.

HIGHWAY WORK FINANCED BY GAS TAX FUNDS

Elimination of numerous death traps from the state highway system and the widening and thickening of inadequate pavements was accomplished during 1924, through the expenditure of gasoline tax money and motor vehicle funds, according to a statement by Harvey M. Toy, chairman of the State Highway Commission.

"The projects made possible by the state's share of the gasoline tax," said Toy, "already have saved lives and resulted in untold benefits to the motoring public. It will take years to complete the work that ought to be finished now. A start has been made, however, and as funds for primary construction are practically exhausted, the major activity of the commission during 1925 will be reconstruction work on existing highways and bridges."

Expenditures from the motor vehicle and gasoline tax fund for the year 1924 for reconstruction work done under contract and by state forces, says the report, and for general and specific maintenance, including new equipment and new buildings, was \$8,782,000.

Way Paved To Develop California's Vast Structural Mineral Resources

Co-ordination of the structural industries, standardization of structural products, organization of structural producers and an aggressive publicity campaign on the structural minerals and products are the fundamental steps to be taken before there can be an adequate development of the vast structural minerals resources of California.

These were the conclusions arrived at after a two-day conference of structural producers and users, held January 26-27 in the auditorium of the Pacific Gas & Electric Building, Sacramento, under the auspices of the Industrial and Structural Minerals Division of the Department of Mines and Mining of the Sacramento Chamber of Commerce. The meeting was attended by representatives of the structural industry and organizations interested in mineral development, all sections of the State being represented.

Marks Initial Effort

This California Structural Minerals Conference marked the first statewide effort made in this State to bring together the structural producers and users in an effort to promote the greater use of California building materials and to stop the present extensive importation of these materials into the State from the East and foreign countries, while its immense deposits lie idle or undeveloped. The conference marked the most important step forward taken in industrial development in California in years.

To the earnest and hard work of F. W. Bunyan, chairman of the division and steel metallurgist of the Southern Pacific Sh. ps at Sacramento, and his committee the successful outcome of the conference is due. The other members of the committee are: P. T. Albert, coast representative, Cleveland Rock Drill Co.; C. H. Carter, electrical jobber; W. F. Gormley, mine operator; Hyde Gowan, editor, "Mining Times"; C. A. Logan, district engineer, State Mining Bureau; Edward S. Van Dyck, mine operator—all of Sacramento.

Bunyan presided at the sessions, and in opening the meeting Monday morning, January 26, sounded the keynote as follows: "California has within her soil the raw materials for countless products which today are being imported at considerable trouble and much expense to the ultimate consumer. It is our purpose to study the means of developing California's natural resources, not merely along general lines, but in some detail with the assistance of you men who are already in the business of turning out products into the making of which go minerals and of producing these minerals. California can no longer delay an adequate development of her structural minerals. Her industrial future depends on their utilization."

Resolutions Adopted

Concrete results of the conference were expressed in resolutions adopted the second day. The first resolution, requesting the calling of a statewide meeting on both industrial and structural minerals by the California Development Association, and another for the establishment of a State Department of Mines and Minerals.

Larger Magnesite Duty

As the result of the representations of the magnesite producers that they were suffering an unfair competition from foreign importations, a resolution was adopted asking for an increase in the tariff on this mineral.

A resolution was also adopted,

RA. BEIT F. HEWS, MANAGER
Department of Mines & Mining, Sacramento Chamber of Commerce

authorizing Chairman Bunyan to appoint a committee on the permanent organization and standardization of the raw structural and industrial materials of California.

Throughout the conference, speaker after speaker laid stress on the need of securing the active cooperation of architects and builders in specifying California materials, price and quality being equal.

Attend Luncheon Meeting

The majority of the delegates attended the weekly luncheon meeting of the Department of Mines and Mining, held at the Sacramento Hotel, and made brief talks, dealing with their problems.

President W. E. Camp, of the Department, called upon Charles S. Knight, industrial director of the California Development Association, to give a report of the 2-day steel meeting held Jan. 23-24 at Del Monte. He said that 175 interested in the steel industry in California had attended and every phase of the industry was discussed. A large committee was appointed to bring about closer co-operation between the steel manufacturers of the Pacific Coast and to elicit financial support of a greater development of the steel industry. Particular efforts will be made to find a fuel for the utilization of the vast iron deposits of California. Knight said that strong efforts would be made to develop the china clay industry in this state, as there are ample deposits and good markets on the Coast.

"We are not going to eliminate Eastern competition, but we are going to endeavor to get California to consider California products first, all things being equal," said Knight. "We must first develop markets at home for our mineral products; we must build up our existing industries as well as bring in new ones. Industrial works are absolutely dependent upon the development of the mineral, agricultural and timber resources of the back country."

The steel men adopted resolutions calling for the coordination of the industry in California, establishment of a state-wide clearing house, complete survey of the steel industry and a publicity campaign to develop existing pay rolls and secure new ones.

Fabricate Minerals Here

H. R. Jackson, industrial secretary of the San Diego Chamber of Commerce called attention to the absurdity of shipping California raw materials to the east to be fabricated, and then re-shipping them back here, necessitating the payment of double freight charges.

"Manufacturers seem to think products coming from 2000 miles away are better than those right at home," said Jackson. "We have the finest kind of Silica sand in San Diego, as well as feldspar and china clay, yet we import all our glass and china ware. We have the best iron ore deposits in the United States."

M. E. Dittmar, of Redding, announced that Kennett smelter was operating and desiring ores to smelt. He then dwelt on the development of Lassen Volcanic National Park which he stated was due largely to the cooperation and assistance given by the Sacramento Chamber of Commerce. He urged the utilization of the extensive white fir forests of California for making wood

pulp for paper, and called attention to Iron Mountain's \$44,000,000 production in 30 years, and the \$50,000,000 from the Mammoth mine in 20 years, in the Redding district. He cited the recent taking over of the Bully Hill and Afterthought mines by one of the largest paint companies in the nation for the production of zinc white. "It is time that California reawakens to her industrial opportunities, not existing elsewhere on the face of the globe," said Dittmar.

Must Educate Architects

R. H. Van Norden, secretary of the Columbia Marble Company, asserted that Californians would not use California products, and that California architects would not specify California marble, even when prices and other conditions were equal. He said that the structural producers must get the architects back of them. Van Norden said his company produced \$140,000 worth of marble last year and employs 55 men. He urged a campaign to the end that California would demand the specification of California marble and other structural materials.

Jarvis cited the adoption by the Department of Resolutions urging the use of California structural products in various public buildings to be erected here and urged that Chambers in other communities take similar action.

F. W. Bunyan suggested that the proposed Structural Minerals organization should bring before the college of architects at Berkeley, the artistic and practical merits of California structural mineral materials.

Must Awaken California

Brief excerpts from the talks given Monday morning and afternoon at the conference follow:

J. H. Bell, manager, El Dorado Lime & Minerals Co., Shingle—"California must be awakened to the vast deposits of commercial minerals within her borders, which could supply thousands of industrial plants. I believe the only way this can be done is to constantly keep before the public through press articles these minerals and the opportunities awaiting their development."

Emory E. Smith (Smith, Emory & Co., Industrial Engineers, San Francisco)—"Now is the logical time for a specific group to get together and work as a unit in putting over a definite development program. I believe a later meeting should be held, at which all our commercial interests should be represented. I have for many years been engaged in developing industrial minerals, but unfortunately engineers are supposed to show their ability by keeping their mouths shut and cannot reveal all that I have learned."

"Today California is on the eve of an industrial growth that will center the eyes of the manufacturing world on her. Eventually we shall cease importing foreign products. When we have adequate funds for publicity, then manufacturing from our raw materials will start. But the mineral producers must be organized. Recently the textile men in San Francisco organized a group, and within a few years by combining mills, we shall be manufacturing silk and cloth. You structural men must likewise form a group, which can accomplish a really worth while development of raw materials. I would also like to see all industrials form a group to carry out a California Resources program. I believe that as a result of this gathering here today and the publicity service of the Sacramento department, there will be no dormant

mineral deposits in the State at the end of twenty-five years."

Magnesite Producers Suffer

J. A. Bernhardt, vice-president, Sierra Magnesite Co., San Francisco—"At the present time the plastic magnesite industry is in bad shape, owing to the fact that the existing tariff rate does not keep out foreign magnesite. Magnesite is being shipped in from Austria, Greece and India, and owing to the low labor costs in those countries, we cannot compete against it. Our production costs are rising, and this foreign importation is unfair competition. Numerous magnesite properties in California have been compelled to suspend operations. I desire to offer a resolution, addressed to the U. S. Tariff Commission, requesting a 50 per cent increase—\$12.50 to \$18.75 per ton—in the duty now imposed on magnesite coming into the country."

Relates Previous Struggle

Lewis E. Aubury, mining engineer, Burlingame, and former state mineralogist—"An Oakland mining man informs me that many shipments of cement are being brought to California from the Scandinavian countries. I believe that we should initiate a movement to have a comprehensive survey made of those minerals which need more protection. Twenty years ago I had to fight both the postoffice and treasury departments to get California structural materials recognized and given a square deal. When they got ready to build San Francisco's city center, which was while I was state mineralogist, I found that Utah sandstone had been specified. I went to bat with the mayor and the supervisors, and finally got California granite specified, although the change increased the buildings cost."

"Later I instigated the passage of a legislative bill ordering that in all public work, California products should be used, price and quality being equal. We should work to keep out foreign products so as to give California products a chance."

E. E. Smith explained that the cement importation was slight, and that it was the only thing those countries had to ship to establish a trade balance. He said that California cement plants were all prosperous.

Publicity Necessary

H. R. Jackson (industrial secretary chamber of commerce, San Diego)—"We are developing our vast limestone deposits. In planning for the erection of a large cement plant, we found distribution to be the main problem, but finally solved this by locating the plant in San Diego instead of at the quarry. The entire first year's output has been contracted for in Imperial county."

"Publicity is absolutely necessary if we are to develop our minerals. I am convinced that by consistent and persistent advertising we can get California materials used."

Architect's Position

R. A. Herold, architect, Sacramento—"In construction we have to contend with workmanship. That is why I will not specify magnesite floors—it is impossible to get them properly laid. Workers will not smooth them properly. It is said that some architects are too aesthetic, and that others will follow the lead of the more prominent ones. I believe that architects will specify California materials, if they can get them equal to others. I have always done so, for I know the quality of the state's product. In the case of marble, the freightage is the same on California marble as on Alaskan marble. The Chinese sandstone is as fine as any produced, and you cannot beat

California granite. We have good slate, but California has never taken to slate roofs. Out here we prefer the Spanish and Italian styles of architecture, with stucco walls and tile roofs. There must be a campaign of education on California materials. Furthermore, the producers must adopt a uniform, letter-size form of circular, that will fit in our files. Now they are every shape, and are as a result generally discarded. I am at your service at all times."

Depends on Architects

R. H. Van Norden (Secretary, Columbia Marble Co., Columbus, and San San Francisco)—"Everything depends on the architects in the development of the structural industry. Until we can get them to specify California structural materials, we cannot develop any further. And I tell you frankly that California architects are not sold on California materials. We have to fight for every chance we get, although our marble has been proven the most durable and is the equal of any white marble imported. Five years ago we had a payroll of \$20,000 annually, now it is \$60,000, and we employ 55 men. We are getting into many of the Pacific Coast cities with our marble."

Must Inform Public

Charles S. Knight (industrial director, California Development Association, San Francisco)—"The lack of interest in California industries and products is largely due to the failure in getting proper information to the public. We should work vigorously to get all specifications to read 'California product or its equal.'"

"A general California purchasing policy on the basis of price, quality and service would be excellent. Structural producers must establish a definite contact with the users or buyers or their products. Furthermore, we must get financial support in California for our industrial enterprises, before we can go to the east for money. The clay industry is suffering from English competition, and perhaps we should get the tariff raised from 40 per cent to 60 per cent. Let us pull together and really do something."

Specialize on Setting

W. E. Camp, president, Sacramento Chamber's Department of Mines and Mining—"The great trouble is that people do not realize what we are producing in California or what we can produce here, particularly in manufacturing. Take the Oakland electric lamp factory of the General Electric Co., which started 10 years ago with fifteen employees. Today it employs 1300 and its annual production is 30,000 lamps. In my opinion the great trouble has been that the producer in California has not specialized sufficiently on selling. He must learn that he must create a market for his product. He must focus the public's attention on it."

D. G. Nunnery, manager, Sacramento Free Building Materials Exhibit—"Today people buy largely what they can see and examine. Publicity will not bring as concrete results as an exhibit of California structural materials."

E. E. Smith cited the great advantages that had resulted from the maintenance of a permanent structural mineral exhibit from the maintenance of a permanent structural mineral exhibit in Smith, Emery & Co. office. E. W. Bunyan suggested panels of these materials on the wall opposite the new relief map in the San Francisco ferry building.

Have All Materials

A. L. Watt, Plymouth—"We have the best of clays, slate, limestone, white and red marble, chromite, iron and coal in our districts. Why then, should California pay heavy transportation on

these same materials to get them from the east? The great difficulty is that capitalists will not open up deposits—I have been trying for years to get my red marble deposit developed. I hope that the structural industry will soon be standardized, and the money for such materials kept in California."

S. M. Minges, Coalings Mineral Association, Coalinga—"We have good deposits of gypsum, but it is twelve miles from a railroad, and cannot be utilized at present. We need more transportation to mineral districts."

Lloyd L. Root, state mineralogist, San Francisco—"The State Mining Bureau stands ready to help the structural producers in any way possible. At present, the California magnesite industry is suffering from heavy importations from India, and the 1924 figures show a decreased production. This industry received a setback after the war, and has not yet recovered."

Hold Public Meeting

On Monday evening, a public session was held, at which the speakers were Lloyd L. Root, Charles S. Knight, M. E. Dittmar, H. R. Jackson and Lewis E. Aubury. Root asserted that mining has been held back in California through a lack of co-ordination, miners thinking individually instead of collectively, and that only during the past two years, since the Sacramento department of mines and mining launched its campaign to build up the industry, had they shown any willingness to get together. He said that fifty-four minerals were being produced in California, and that with proper freight rates the producers could compete with eastern and foreign markets.

M. E. Dittmar, secretary of the Lassen National Volcanic Park Association and interested in extensive non-metallic deposits in Shasta county, pointed the remarkable growth in certain mineral productions during the past twenty-five years. He showed how the cement production in California had grown from 52,000 barrels in 1900 to 11,800,000 barrels, valued at \$25,320,000, in 1924. He said the section of Shasta county tributary to the Kennett smelter had produced during the past fifteen years \$58,000,000 in copper, gold, silver, zinc and other metals.

Hard To Get Capital

Lewis E. Aubury warned the producers that it will be hard to interest California capital in mineral development, citing the case of the cement industry, which had to be financed in Chicago when it started.

"California in the next twenty-five years will be the scene of the greatest human development in the world," said Emory E. Smith. "We have more natural resources than any other territory of the same area and less population. We have better soil, better social conditions, better climate, better everything than any other part of the world today. Nearly all the development of today is based on science. If we are going to put the industrial development of California ahead, we must use scientific intelligence. We must call on scientifically trained men and they will help us to command the market. Movements like this conference that are intelligently made and guided are bound to succeed."

Knight, in cooperation with the writer, is already making plans to call the big state-wide meeting on the development of California's immense industrial and structural minerals reserves, early in April. At this meeting, a definite state program will be adopted. Bunyan will also shortly name the committee to arrange for the permanent organization of the structural producers and the standardization of the industry.

Portland Cement—Then and Now

One hundred years ago Portland cement was patented in England by Joseph Aspdin. Of course, cements of one kind or another had been used for several thousand years, but with this discovery began a new era in the usefulness of cement.

Leeds, the home of Joseph Aspdin, was also the home of John Smeaton, builder of the Eddystone Lighthouse, who made many experiments in discovering the reason for the hydraulic properties of cement. For seventy-five years the atmosphere of Leeds must have been surcharged with the elements of Aspdin's invention.

Aspdin, like most inventors, added to accumulated knowledge the necessary bits of new experience which accomplished a distinct forward step. He deserves and has received the credit and honor due men of vision and enterprise, on whom progress depends. He also had the foresight to adopt and protect a trade name of singular appropriateness and appeal, when he called his material Portland cement after the widely used building stone quarried in the Isle of Portland.

The early years of the 19th century witnessed many other important discoveries. These created new conditions which induced new inventions. These ceaseless adjustments and adaptations result in the complex and nicely adjusted relations we call civilization. As parts of the social organism, we each function in either a distinguished or undistinguished manner, to help or retard the net result.

The same one hundred years which witnessed the greatest progress in every line of human knowledge, effort and relations, saw Portland cement playing its full part in promoting progress, and the cement industry adjusting itself to changing needs.

The crude manufacturing methods of Aspdin were improved and perfected by Isaac Johnson and later technical men. Portland cement with definite constituents and superior qualities, rapidly supplanted the existing natural products. Its manufacture soon spread to the Continent, later to the United States, and finally to all parts of the

Address of F. W. Kelley, President,
Heldberg Cement Company at
Celebration of Anniversary of
Portland Cement

world, as chemistry and engineering overcome the difficulties presented by raw materials of widely varying chemical and physical characteristics. We in this country should always hold in grateful memory the names of the pioneers who overcame the unique difficulties in the United States.

Today a reliable product, assuring good results if properly used, can be obtained almost anywhere. This is substantial evidence of a century of endeavor.

Portland cement is only potentially useful until it fulfills its destiny as an integral part of concrete. This transformation in which its inherent qualities are fully utilized and made permanently useful, involves knowledge and workmanship by the user.

Aspdin probably both made and used his first product. Others who employed early Portland cement had been trained through long apprenticeship in the traditions and experiences of generations of builders. The quantity of Portland cement was limited. Its early uses were few and simple.

Then came a gradual realization of the wonderful adaptability and convenience of this plastic stone. Its field was widened by the added qualities conferred on concrete by metal reinforcement. The earliest attempts at adaptation which had followed closely the forms of the building materials supplanted, gave way to new designs in which the advantages of concrete were directly utilized.

Soon the engineer and trained builder who had aided in much of this development, no longer monopolized the design and application of the material. The handy-man; anybody who wanted permanent structures, tried Portland cement concrete. He got results. Others tried it. A thousand uses developed. It was easy to use, but also easy to abuse.

A new need was clearly indicated. Obviously the utility of the product

would be proportional to the number of satisfied users. All who desired to employ it must be informed how to use it rightly. Thus began a world wide program of research and education which in the United States has few parallels.

The kind of structures in which concrete could be most favorably employed, and the best way to make the concrete in each of these structures was tested in the field and studied in the laboratory. Fundamentals were determined. Methods for making the information available were weighed and the indicated means were provided. The end of the first century of Portland cement finds us in this stage of development.

The public which by using concrete has made an estimated saving of \$10,000,000,000 in its construction costs, wants to save more. It is convinced that for many uses concrete is supreme.

The estimated world use of Portland cement is now at the rate of nearly 300,000,000 barrels per annum. Portland cement concrete is part of the fabric of our civilization.

This centennial is a mile-stone by which progress can be measured, and is a beacon casting its light on the path to the future. Our attention is directed to what needs to be done, as well as to what has been done.

We who are privileged to make and use this wonderful material, have a duty to perform for ourselves and for posterity, in continuing unabated our efforts to apply all the resources of modern knowledge to perfect the making and use of our product.

This anniversary is best celebrated; we best show respect for the memory of the distinguished and undistinguished workers who have developed this great industry through its first century, by resolving to do our bit in aiding the complete adjustment of the industry to the needs of the dawning century.

We will also thus gain the satisfaction of playing a worthy, if perhaps undistinguished part in supplying a real service to society.

What California Is Doing in Housing Regulations and a Uniform Building Code

The State of California through its Commission of Immigration and Housing has been busy during the last few years correcting, or having the local officials correct violations of the State Housing Act in existing buildings. This refers to apartments, hotels and lodging houses erected prior to the passage of the State Housing Act. Where we had the support of Building Inspectors, Health Officials and City Councils, the work has been comparatively easy. In instances where this co-operation was not given the work was somewhat more difficult. It required an educational campaign in order to convince some of the City Councils that it is a good thing for their city to conform to the law in all respects.

The largest part of the expense of making existing buildings comply with the law has been to give inside rooms direct ventilation to the outer air. This has necessitated the putting in of courts, light shafts and sky-lights, which in many cases was done only by expensive alterations and even in some instances the wrecking of the buildings. There have been from 1500 to 2000 inside or poorly ventilated rooms remedied to conform with the law since this Act went into effect.

Improved Conditions Noted

In addition to this a great many of these buildings had inadequate toilet, bath and shower facilities, and many of those in existence were unsanitary and in a bad state of repair. These conditions have been eliminated by persistent inspection work by the regular inspectors of the Commission. Also much of the credit for this improved housing condition must go to the local inspectors for good work.

The Commission of Immigration and Housing of California is only empowered and given authority to enforce the provisions of the State Housing Act which do not pertain to the actual erection, construction, reconstruction, moving, alteration or arrangement of apartment houses, hotels and dwellings in all incorporated cities and towns. My experience has been that outside of the larger cities and towns which have regularly organized building departments, very little is known of the State Housing Act. While it may be true that there are some violations of the State Housing Act in cities where they have a good building department, as a rule the interpretation of the State Law is generally the same among building inspectors throughout the State.

Many of the smaller cities and towns have no regular building inspectors as we understand the term, but most of them have a local building ordinance, as they call it, which in most instances has only to do with a fire district or fire limits. The official that enforces the ordinance or ordinances may be an official who is not familiar with building construction, so that in reality there is little real enforcement of either State or local laws governing the erection of buildings. As these towns grow they acquire regular building departments, and then it takes years to get rid of a lot of inferior and poorly constructed buildings, which work carrying with it a lot of grief for the building inspectors.

Local Officials Co-operate

In making surveys of existing buildings in incorporated cities and towns the Commission has consulted with the

By Robert Greig, Director of Housing,
California Commission of Immigration and Housing

local officials as to the extent to which they were enforcing the State Law regarding new construction. In this work we have discovered a number of infractions of the law, which were committed through lack of familiarity with the State Housing Act.

The Commission has done much work in encouraging some of the cities to adopt a more up-to-date building code, but there is considerable work yet to be done in this direction. The existing building problem will eventually be eliminated by the wrecking

and removal of many old buildings to make way for more up-to-date structures. It is hoped that a building code can be devised that can be applied to all incorporated cities and towns throughout the State.

Uniform Building Code

At the annual meeting of the Pacific Coast building officials, held in the city of Oakland, November 20, 1924, the key note among the building inspectors was for a uniform building code. The matter was also discussed at a meeting in the city of San Diego, 1923.

A building code is primarily written and enforced for the dual purpose of protecting human life and the prevention of fire, as its title indicates a code of laws dealing with the methods to be employed in the construction of buildings, materials to be used, and processes. As previously mentioned, every city of any size has a building ordinance of some kind and in those places where there is no building code, it is natural to concentrate effort to secure one.

The result is in every city we have a different building code. In the main they look the same but they are not. When a city starts to prepare a building code suitable to their needs a committee is generally appointed which may consist of an architect, builder, engineer, realtor or some other business man along with the Fire Chief, Building Inspector and City Attorney to draft a building code. They start out by getting copies of what other cities have in building ordinances, so that when the ordinance is prepared it is more or less copied after some Ore., or any other Pacific Coast city.

There is a subtle temptation in the form of local pride which sometimes makes a local committee in drafting a building ordinance to have something different than that of the adjoining city and they desire to have the law they draft seem more essentially their own. A distaste for copying and an exaggerated desire for individual expression lead them to change for the sake of changing, overlooking what is standard practice and fix other standards because it is theirs.

Provision Now Jumbled

The provisions which relate to the different classes of buildings are jumbled together; they may divide buildings into eight or ten classes. Another city would only have four or five. There is no good reason why a code used by Los Angeles could not be used in San Francisco, Oakland, Portland, Oregon, or any other city on the Pacific Coast.

There is no good reason why floor loads, thickness of walls, working stresses and weight of materials, working stresses for timber columns for iron and steel working stress, for concrete, plain and reinforced, the amount of reinforcing steel to go into any column or wall, should not be the same in any city. A uniform code should have the minimum requirements and should be elastic enough that it would not be hard to change a section or add one to fit local conditions. A uniform building code would eliminate a good deal of the controversy that is continually taking place with building inspectors, architects and builders, over the meaning and interpretation of individual codes.

Making Cement From Oyster Shells and Clay

The new plant of the Pacific Portland Cement Co., Consolidated, located on the shore of San Francisco bay at Redwood City, has been called by visiting cement mill experts, the last word in cement mill construction. All structures are of concrete so far as possible and the materials in the process of manufacture are handled by the straight line method, requiring a minimum of transportation from the time they are received until the finished product is ready for shipment.

The initial capacity of the plant is 2500 bbl. per day. However, the design of the plant is such that as business conditions warrant, which will come about by natural development of the territory served by the company, additional units may be added without interfering with production.

The transportation of the finished product will be by both land and water. The Southern Pacific railroad has taken over and rehabilitated the branch railroad constructed by the Redwood City Harbor Co. and extending from

By Chas. W. Gelger, San Francisco,
In "Rock Products," Chicago

boats. The fact that the plant can operate with so small a force is occasioned by the absence of quarrying operations and the installation of labor-saving devices.

In 1911 the company opened its limestone quarry on the American river, to supply additional lime rock to the plant at Cement and high-grade limestone to sugar and steel mills. This quarry and the mill at Cement will be operated in the same manner as heretofore, except that increases in the company's business will be taken care of by the plant at Redwood City.

In addition to cement manufacturing, since 1912, this company has been the leading producer of gypsum products on the Pacific Coast, and in May of 1924 opened a new plaster mill at Gerlach, Nevada. This mill represents an investment of \$1,500,000 and supplies the company's brand of gypsum products, and agricultural gypsum to

The oyster shells are nearly pure carbonate of lime and the other necessary elements—silica, alumina and iron—are contained in the clay in proper proportions of cement making. These shell and clay beds were acquired by the cement company several years ago and embrace over 30,000 acres and practically cover the entire floor of south San Francisco bay and the company's engineers estimate that there is a sufficient quantity of raw materials to supply the plant for several hundred years.

The shells and clay are excavated from the floor of the bay by means of a suction dredge (specially designed and built for this purpose) through a 16-in. pipe to barges alongside the dredge and conveyed to the unloading wharf at the plant. This dredge with a force of six men replaces the usual 75 to 100 men required for quarrying operations where limestone is used as a raw material and its operation is cheaper than the usual quarrying expense, which includes blasting, steam

General view of the Pacific Portland Cement Company's plant at Redwood City, California, showing the traveling crane that handles the shells and silt from the barges, and the storage bins.

their main line tracks in Redwood City to the site of the cement plant, while the cement company has constructed a dock in Redwood channel and has dredged the harbor to a depth of 30 ft., so that in addition to being able to barge the finished product to all San Francisco bay and tributary river points, the plant can load for coastwise and transpacific shipment at its own docks.

100 Men Employed

The Pacific Portland Cement Co., Consolidated, since its organization in 1901, has operated a cement plant at Cement, Solano county, where 500 men (including those at the Auburn quarry) have been constantly employed. The operating force at Redwood City plant will be approximately 100 men for the initial unit, not including those employed on the dredge, barges and tow-

northern California, Oregon, Washington and Nevada. In November, 1924, the company completed another plaster mill in the Imperial Valley, near El Centro. This mill supplies the company's gypsum products to Southern California and Arizona.

Redwood City Cement Plant

The raw materials used in the manufacture of cement at the new Redwood City plant are new to the cement industry on the Pacific Coast. They consist of oyster shells which are found in vast deposits in South San Francisco bay, together with silt or clay washed down from the surrounding hills. (Shells are used for making cement by the Texas Portland Cement Co., Houston, Texas, and will be used at the new Phoenix plant at New Orleans.—Ed.)

shovel loading and the crushing of large pieces of rock.

The contents of the barges are unloaded into concrete storage pits by a traveling crane. The same crane takes the material from the storage pits and places it in bins from which it is conveyed to the grinding mills by means of screw conveyors. One thousand tons of this material are handled per day. These raw grind tube mills reduce the shells and clay to a slurry. Conveyors take the slurry from the mills to silos or slurry tanks. Here the contents of the tanks are analyzed, and the material pumped from one tank to another and into the blending tanks until the exact mixtures desired are obtained. The kilns make one complete turn in 180 seconds. The fuel is oil, finely atomized and blown into the kiln under regulated pressure. The heat reaches in the burning zone, a

temperature of from 2300 to 3000 deg. F. Over 300 bbl of oil are consumed in each kiln daily.

Kilns 235 Feet Long

The kilns are 10 ft. in diameter and 235 ft. long supported upon four carrying rings. The unloading crane for bringing material from the barges into the mill or storage is of the two rail trolley type, high speed, with clamshell bucket of 4 yd. capacity. From the ground line to the track is 68 ft. The total length is 340 ft. As the mill feed bins could not be constructed of a capacity sufficient to insure continuous operation of the mill, it was necessary to provide ground storage of raw material. This was obtained by sinking two reinforced concrete cylinders each 86 ft. in diameter and 30 ft. deep. One of these cylinders was placed in each of the two bays under the trolley crane structure.

The supporting stratum of ground under the mill is a bed of clay several hundred feet thick. The top of this

clay bed is 30 ft. below the normal ground line, this 30 ft. in depth being soft, mushy silt that has been deposited by flood waters from the mountains. It is so soft that a horse cannot walk over it. The main bed of clay underneath the silt is rather soft on the top, but quickly hardens into a solid stiff clay as the depth is increased. After prospecting with drill holes and test piles it was decided that air piles 80 to 85 ft. in length would give the required support. By means of reinforced beams, caps and slab construction the main floor of the mill was brought up well above water level. Due to the heavy loads it was found more economical to use the beam and slab construction than to make a concrete pile extension, and as a consequence the bottom of the concrete beams are down below ground water level. The plant is practically earthquake and shock proof, as it could only move as a mass. The building covering the mill machinery is made entirely of reinforced concrete and steel sash.

In addition to the necessary machinery required throughout the manufacturing plant there are provided washrooms with hot and cold flowing water, toilets and drinking fountains and garages for the workers who drive motor cars.

Plant Equipment

Engineering and construction were done by the Pacific Portland Cement Co., J. C. Buckbee Co., Chicago, being consulting engineers. The kilns, coolers and compeb mills were furnished by the Allis-Chalmers Manufacturing Co.; the compebs are driven by Allis-Chalmers synchronous motors, and all other motors are the General Electric Co.'s. Allis-Chalmers slurry pumps and compressed air system of slurry agitation are used. The compressors were furnished by the Sullivan Machinery Co. The dredge was built by the Union Iron Works, San Francisco. The crane was built by the Pawling and Harnischfeger Co., Milwaukee, Wis., after designs by the J. C. Buckbee Co.

The kilns, which are 235 ft. long, with an internal diameter of 10 ft. Note oil burners and the tight connection made with the burner and kiln

Utilizing Lifetime—A Talk On Apprenticeship

The problem before the Builder and Industrialist is "How can vocations and education be most practically combined?", as the great majority of people must labor at something productive. Educated people without a desire for labor can be an insufferable evil.

I have no particular regard for educational theories, and have no new theories to propound. In educational matters, I am thoroughly old-fashioned and believe in creating and arousing a desire to learn to be the "Big Thing". I believe acquiring learning is purely a matter of personal practice, interest, an acquisitive turn of mind and concentration.

Within the memory of most of us, the three R's were considered to be the ample system. Half of our citizens have been educated within them. The three R's of today represent a whole lot more in study and education than formerly. There are but few in the United States who cannot read and write fluently. Many in their more mature years have acquired the love for the literary arts, understand the plays and the classics, but the growth of our educational system has all been in the same direction. There is practically no difference in the instruction given to those who are ambitious to become lawyers, doctors, engineers, architects and other professional men, and the instruction given those who are neither leaning, inclined, nor ambitious towards the professions, who neither have the means, desire, ability nor endowment to enter the professions, but are content to earn an honorable living at a trade or vocation.

Education for Professions

Yet most of the education, after the seventh grade, is directed towards the professions. Ninety-two per cent of our youths do not get to college, approximately five per cent graduate. Let us look at the somewhat archaic and chaotic system of preparing the ninety-two per cent's lifetime in a practical manner.

Let me answer in the terms of my own industry:

In most of our States, our youths are not permitted to go to work at the building trades until they are sixteen years of age. What are we doing for these youngsters, and how are we utilizing their lifetime for the benefit of themselves, the public and the future employer? It should not be necessary for the young man who desires to become a building tradesman to be required to burden himself with many of the subjects now taught, and in which he has no interest whatsoever. He should not be required to study the same general subjects as the youth who has a leaning or ambition for the professions.

The general tendency in the High Schools, as I know them, is to encourage students to become members of the professions — the average high school instructor, Academician encourages them unduly towards the professions. For some unaccountable reason, the Academician and the American parent seem to think that the professional class and semi-professional class, such as clerks, salesmen, draftsmen, etc., are considered to possess greater gentility, and they are looked upon by the present and past generation as something superior to the mechanic. Could these good people but see the numerous opportunities that are constantly pre-

Address of Gerhardt F. Meyne, Chairman, Apprenticeship Committee of Associated Building Contractors of Illinois, Before National Society of Vocational Education at Indianapolis, Ind.,

sented to the vocationally trained man who knows his trade fundamentals, and could they but know of his yearly income, they would view him in appreciation instead of depreciation. The vocationally trained man can take advantage of these numerous opportunities by continuing his education in night courses, short term college courses, etc. He cannot only aspire to the heights in industry, but, what is more, if he applies his endowments, training and ability, he can actually "arrive."

Demand for Vocational Education

Probably nothing indicates the justification for the present demand of vocational education more than the fact that numerous college men graduating from the literary arts and science courses are turning towards the vocations as a means for a livelihood. It is not infrequent that one finds men of several years' college training endeavoring to get into the industries. When one stops to think of it, one feels that they have not utilized their lifetime to the fullest, have probably acquired considerable needless information. Of course, time spent in any education is not time lost, but many subjects that do not interest the student are taught in our present high schools and the boy who does not go to college must wrestle with them, when his time could be turned to greater practical advantage.

The Federal Board of Vocational Education has made up a chart based on the 1920 census, and shows some very remarkable figures and percentages, when analyzed. It has been published and discussed before.

The Builder and Industrialist who looks at this chart in reverie and meditation, (if he will take time to study the chart at all) I believe, will agree with me that the lifetime of our youths could be turned to greater advantage to the Nation and to themselves, if the educator would take advantage of utilizing the years that are so often dribbled away because of lack of interest in the subjects taught. The chart reveals that there are two millions of our young, between the ages of five years and twenty years in our schools. Of these two millions, ninety-two per cent leave school between the ages of thirteen and twenty to go into some industrial, commercial or agricultural pursuit. What are we, the public, and you educators doing to prepare them for this new thing that they are facing? Let us go back to the chart! The egress from school is about as follows:

125,000 or 6% leave between the ages of 13 and 14 years, another 125,000 or another 6% leave between the ages of 14 and 15 years. When we come to the ages of 15 and 16, the figures jump considerably and show that 400,000 or 20% leave your school for one reason or another. 300,000 or 15% leave between the ages of 16 and 17 years. Another 400,000 or another 20% leave between the ages of 17 and 18—all of these to engage themselves in some life occupa-

tion. Are we doing everything to fit these young people with an understanding of what confronts them? Have we developed their capabilities to shift for themselves? For, in biological terms, we may consider them weaned.

College Graduate Lesson

Now we come to the college age, and find that only a small percentage are left to enter college, and the chart shows that the youths are leaving college at the rate of 100,000 to 200,000 each year, and that only a very small percentage—approximately only five per cent, graduate. Yet the entire curriculum, in most instances, from the ages of 13 to 20, has been set and made up for the purpose of entering the youths into college. I ask again, have we utilized the lifetime at our disposal efficiently?

There are whole libraries written on vocational and apprenticeship education and training, but there is no need of giving historical back-ground to this subject. I would like to give you the view-point of a builder. He may not be qualified to address you because of his lack of degrees, but he has served apprenticeships in a trade and has worked through the various steps and is proprietor of his business. He is tremendously interested in vocational education. He is training numerous boys under various systems. Personally I believe the old "Indenture System" has outlived its usefulness. It is no longer necessary for the master to provide shelter, food and clothing for the boy. It is no longer necessary to teach him to read and to write, as usually was his obligation. He now pays him the wage he is able to earn. The parents and school usually provide the other.

I hope to see that the public schools of today will be the vehicle of training the industrial arts as were the medieval monasteries of the eighth and ninth centuries. We know that it was usually a willing exchange of manual labor for protection, teaching and subsistence, either within the monasteries or to those who lived near them. Those who would gain knowledge were obliged to give their labor free in exchange for learning, protection and living, creating practically a condition of servitude. This condition no longer exists.

Builder Seeks Industrial Freedom

The thinking Builder and Industrialist is no longer vying for the Freedom of Labor, but for the Dignity of Labor, and general industrial freedom, and I believe that the time is here where the public school is taking the place of the old monastery, the time of servitude is past, the time of the old practice of indenture is slowly passing. Especially is this true in the building industry.

The builder is confronted by a peculiar situation in obtaining and teaching boys. The builder is in competition with other employers for the services of the boys. The semi-skilled trades are able to offer to the young man much greater pay—the boy can, in a comparatively short time, acquire the knowledge of running machinery and become a producer. He can earn big money by driving motor trucks and, in his limited course of reasoning, he does not see the opportunities and advantages of becoming a highly skilled artisan. It takes considerable of his time and, by reason of the cost of his training, his pay must naturally be

less than that in the semi-skilled trades. We builders, I say, are in competition for these boys, and unless the boys' parents are able and willing to help sustain them for the first few years, it is difficult for us to give the boys all the opportunities they should have to acquire building knowledge. Hence, let us use the public school for this fitting and service.

Tax Paid to Educate Youth

Now then, the builder feels that inasmuch as he is paying taxes for the education of the youth of the country, he also has a right to expect some service from this youth. Inasmuch as everybody, including the poorest among us, who has a dollar to spend for their sustenance, is helping pay taxes, and inasmuch as approximately 50% of the entire State taxation is spent for educational purposes, the parents alone are not the only ones interested but all of us are interested, and we have a right to expect a general service from each other. It is part of our civilization complex. The shoemaker, tailor, baker, merchant, clerk, etc., cannot live without my industry. I cannot lead a comfortable existence without theirs. Now, let us realize that in our education system, and let us utilize the lifetime at our disposal of the young between the ages of 13 and 20, and those who are not particularly inclined towards the professions, teach them something that will be of advantage to them and advance our industries, and hope that later in their lifetime they will become interested in the fine arts and general cultural attainments.

I do not feel that the entire school periods of the boys between 13 and 20 should be engaged in teaching them vocations, but I do feel that, together with teaching them something practical, the seed and desire for learning can also be planted, and if he is endowed with an inquisitive turn of mind, he will learn, by applying himself, much of the culture that is now the requisite of gentility. Should he not be endowed with a desire to know more than the three R's, no amount of tutoring or cramming between the ages of 13 and 20 will give it to him.

I have often been asked what my plan of education would be, so I will repeat it to you. Those boys who are not interested, or who, by reason of necessity, cannot go into the profession, or whose parents are unwilling or unable to provide the expense of this education, would like to see started at an early age, put in a sort of cycle course where their vocational leanings can be discovered.

Public Will Demand Training

After a boy has found himself, or his vocational leaning has been discovered and has decided he would like to become a building mechanic, then the rudiments of these trades can and should be taught in the public schools. Brick-laying, carpentry, plumbing, steam-fitting, and the various other trades, can be taught advantageously in the public schools. The public will demand that they be taught in the near future, but to go on record that you cannot make a finished artisan in the public school. You can teach him the use of his tools, mathematics, drawing, etc., so that when he comes to the Industrialist at the age of 16 or 18 he is able to earn as big pay as the boy who is driving a truck, or the poor, or semi-skilled, machine hand. To become a finished artisan requires knowledge, and the only place it can be acquired is at the building. This competition for the boys and the builders' inability to teach them at an economic wage is one of the causes of the terrific scarcity of building mechanics.

Even though the builder feels that it is entirely possible to teach the rudiments of the trades in the public schools, utilizing such time as may be necessary for the seeding of cultural attainments, the elements in civic and community service, etc., yet when the boy appears for the periods set aside for his chosen trades, he should be in the hands of a practical teacher who has gained his experience on the building.

You, in your previous discussions in conventions, have worked out these problems very effectively. Coming back to the practical side of acquiring a trade to the boy, you can teach the boy in the brick-laying trade, how to cut brick, how to lay out an arch, how to cut tile, how to lay up the various bonds, how to lay out his corners and lay out a building generally, so that when he comes to a building he is not ungainly — he knows something of what might be expected of him. A big thing to acquire in the building trades is also the moulding and shaping of the body and muscles. It is as necessary for the plasterer to have command of his feet as it is for the carpenter the wrist motion. It is as necessary for him to be able to balance the hock as it is for his eye to watch that part of the work to which he is applying his skill. When a carpenter or marble-cutter is using a chisel, they will always watch the point of the tool and watch the reaction of the hammer blow at the chisel point, and not where the tool is receiving the hammer blow. It is necessary to train the eye, mind and muscle to act in unison, the eye to watch the reaction of the tool and not the hammer stroke. When the boys are young, this can be most advantageously accomplished. When we train a ball player, we do not wait until he is 20 years old; when we train a musician, we do not wait until he is 16 years old. Why should we wait to train the body and muscles of a boy who expects to make his living in the building trades. These are all things that can be taught in the public schools. They are Big Things; they are important, and they enable the youths to command a wage, when you dismiss them at 16 years of age, equal to the wage of those who enter the lives of truck drivers and machine hands, with prospects of great future opportunities, only limited to the extent of willingness and application of endowment.

I want to call your attention again to the fact that the periods not required for educational training can be used by the Academician for teaching and seeding the cultural and gentle pursuits.

Then, too, our mechanics know very little of the history of their trade and trade traditions. The building operations of today do not lend themselves to teach boys any of the glorious past in trade achievements. We cannot tell the boy that next to the implements of war and implements of agriculture, the implements with which he is making his living are the oldest known in the world's history. The building trades can point with pride to the existence of their art for at least six thousand years. They can point with pride to the monuments of the past, and they can be told that the old artificer, before the days of industrial enslavement and class consciousness, enjoyed a social standing equal to that of the professional man.

Teacher Develops Trade Pride

The practical teacher can develop in the boys a vocational and trade consciousness, trade pride and appreciation for fine workmanship. It can be pointed out to him that it is not sufficient to know enough of the trade to

"just get by"; that it is unfair to his brother craftsmen to hold them down to a general level when the wage is based on the production and ability of the poorest workman. We know that a poor workman is a parasite on the good mechanics' ability. We can develop a trade consciousness in the building industries, and develop a set of craftsmen who not only have a Union, but also a Trade.

In conclusion, I want to say a word about vocational guidance work. I want to say that I have a very high regard and appreciation for those engaged in it. I know that their work is often thankless and unappreciated by those who should feel grateful. I cannot condemn the average parent enough for the lack of interest that they have for the well-being of their young. I have asked hundreds of children, "What are you going to be when you grow up?" I seldom find an interesting or deciding answer. When I turn to the parents and ask them, "What is your boy going to be? the usual answer is "anything that he likes." The boy usually grows up until he graduates from high school or college undecided as to what his life's work should be. Untold numbers of those who have reached the age of 16 to 20 have enjoyed no vocational guidance, and they usually flit from job to job, ending up nowhere. They soon find their level and are unhappy. I believe it is the duty of the Educational Guidance Directors, where they do not find a decided vocational leaning, to influence the youngsters towards a trade that, in the opinion of the director, might provide them a living. The little experience that I have had in guiding young people to find a vocation and a place in life, has been heart-rending, because the plea for guidance usually comes from young men when they are old to be placed at a trade and have assumed marital obligations. Every Guidance Director can testify to the lack of interest or lack of concern for the welfare of the young on the part of the parents to influence them towards an honest and profitable means of livelihood. They are apparently trusting to Providence to provide for them. The sins of omission of the parent in not concerning himself as to what the boy shall do, or wants to be, are visited on the boy and society.

SEVERE SENTENCES FOR ESCAPES FROM PRISON ROAD CAMPS

According to an opinion of Attorney General U. S. Webb, the California State Board of Prison Directors may fix sentences of one year to life imprisonment upon prisoners escaping or attempting to escape from prison road camps. Prison Director Thomas M. Gannon has informed the highway commission that the Board of Prison Directors will take advantage of the ruling.

For some time past, escapes from the road camps have been sentenced under section 106 of the Penal Code, enacted in 1921, which provides a penalty of one to five years imprisonment. Section 105 of the code provides a penalty of one year to life for escaping from state prison authorities.

The opinion of the Attorney General holds that there is no difference between escaping from the prison proper and escaping from the prison authorities outside the prison. Men in the road camps of the highway commission are under the discipline of guards from the prisons.

In fixing final sentence of men convicted of escaping from the road camps, the Board of Prison Directors, Director Gannon announces, will be governed by the circumstances of each case.

Building Expenditures in San Francisco Since Fire of 1906

To compile building statistics in a style which would prove advantageous to everyone interested in them, is an utter impossibility.

Many desire the statistics according to type of construction—others according to use of structures—some according to installation of certain equipment and materials—and others according to cost.

In the following compilation the building statistics of San Francisco since the earthquake and fire of April 1906 are published according to class of construction and estimated cost. The figures are compiled from records of the Bureau of Building Inspection of the San Francisco Department of Public Works—the most authentic source available.

The amounts given in the accompanying tables have been actually expended being based on building permits issued and not on applications filed for building permits where the estimated cost might be reduced or increased or the application withdrawn and the project abandoned.

As the tabulation will show, previous to the year 1914, expenditures for building construction by the State of California (State Board of Harbor Commissioners) and the City and County of San Francisco, were not included in the statistics compiled by the Department of Public Works. Building construction expenditures of the United States Government were included in the department's reports for the year 1917 only. Due to the war and the suppression of information by the Presidio officials with regard to Federal construction activities in San Francisco, the government expenditures were not included in the department's report during the war period and have not been incorporated in the municipality's compilations since that time.

Considerable money was expended in the construction of buildings for the Panama-Pacific Exposition Company which are not included in the accompanying tables, particularly concession buildings—only the more important structures being included in the department's report.

The "total estimated cost for month" and the "total number of permits for month" columns, commencing with the year 1914, include expenditures for public improvements, namely: Panama-Pacific International Exposition buildings, structures erected by the city and county of San Francisco and for work undertaken by the State of California through the State Board of Harbor Commissioners. Construction classified as "public," however, is published separately, for comparison, immediately following the year in which the improvements were undertaken. The tables show the month in which the permits were granted together with the number of same, the ownership of the improvements and the estimated cost.

Newest Type of Brick Effects Termed "Skintled Brickwork"

New methods in the use of any material, creating possibilities of new effects in architectural design are always interesting not only to architects but to all progressive members of the building industry. Especially is any new idea or development in the ancient craft of bricklaying certain to command attention, if for no better reason than because the basic traditions and practices in the art of laying brick have remained practically fixed and unchanged throughout modern times.

Brick Masonry Developments

Brick masonry has had a great part in the development of various styles of architecture in many periods. An architect may with fair accuracy judge the time of the erection of many ancient brick masterpieces from their general appearance and from their characteristic details. Architecture has had its great periods of rise and decline. In one of the latter, namely the Victorian era, a new vogue in brick effects came into being, in which mechanical regularity in the color and squareness of the individual brick was the predominating characteristic. Another was that the mortar joints were as thin as the bricklayer could possibly make them. There was thus a lack of interest in the appearance of the brickwork of that time, for after all this style of brickwork is foreign to the nature of brick. Brick is a sturdy product partaking of the ruggedness and strength of old Mother Earth herself and it is used most effectively when these dominant characteristics are emphasized.

During the past two decades there has been a healthy movement away from the former strained and unnatural appearance of brickwork. Architects began to realize that in rejecting all brick for facing purposes that varied slightly in shading from a previously agreed upon sample, and that perhaps were not quite perfect on their edges and in which the face was not on a mechanically even plane, they were disregarding the very factor that would have given the brickwork in

By Wm. Carver, Architect
Common Brick Manufacturers' Assn.
of America

their buildings the richest effect. This practice very soon becoming recognized for what it really was, namely, a fad that could not last very long, specimens of brickwork began to appear that because of their rich variation in shading were a delight to the eye. It was also recognized that the mortar joint had its proper place in well built brickwork. No longer was it repressed to as thin a line as possible, but its proper function as a foil to bring out the characteristics of the individual brick began to be more and more appreciated. In fact, some architects increased the width of the mortar joint to a disproportionate degree, making it occasionally an inch or even more in width. Thus the prevailing practice in the use of brickwork is very effective.

Seek Ruggedness and Strength

Some of the architects in Chicago, however, recently started a new movement that brings out to an even greater degree those characteristics of ruggedness and strength that we have before referred to. These architects found that striking results could be obtained if, in addition to the natural slight irregularities of the brick units themselves, they set those units on the face of the wall in an irregular way, projecting and recessing them to give strong effects of light and shade. Effective as this new type of brickwork is in Chicago where it is originated, it would be even more striking under the sunny skies of California. There is no type of stucco treatment that would at once combine these strong light and shade effects with the natural richness of color found in brickwork; and this new range of effects, to which the name of "Skintled Brickwork" has been given, offers a new opportunity for the genius of Californian architects. In addition to the attractive appearance of this type of brickwork, it has another very decided and agreeable characteristic—that of economy.

Cost Is Less

Contractors who have built houses using this type of wall state that it actually costs less to lay skintled brickwork than it does to lay up an ordinary brick wall, and the wall has the great advantage, too, that as soon as the bricklayer has finished, the exterior is completed. It is not necessary to afterward build up a scaffold on the outside and have experts apply one or two coats of stucco. Sometimes the cost of stucco is lost sight of as it is generally included in the plastering contract. Several hundred of the finest homes along the North Shore of Chicago exemplify these newest effects. In most cases the architects for these houses, among which are included some of the most prominent men in the profession in Chicago, have not been hampered by strict cost requirements, their clients being men of taste who above all desired well designed and substantial structures. In spite of this fact, the great vogue on the fashionable North Shore district of Chicago is for skintled brickwork effects, regardless of the size of the house built, and these effects are carried out in all cases in the local common brick, the beauty of which was for a long time almost unrecognized. In many other cities also, this characteristic of common brick has not yet been fully taken advantage of.

Common brick has obtained a wonderful reputation for permanence and reliability for such uses as sewer construction, fire and party walls, backing up of more expensive materials used on the outside surface of the building and for many other effects not particularly requiring an attractive appearance.

The example of skintled brickwork shown here, however, proves conclusively that an artist can make apparent the beauty of any honest material by its proper use in his design. Utilized in the proper way in attractive designs, it will be agreed that these effects are entirely satisfying.

Municipal Building Inspection and Steel Fabrication

In the construction of a building in any congested area there are three parties in interest to be considered—the owner, represented by his architect; the builder or contractor, and the public who must use and occupy the building. The function of the building inspector is to represent this latter interest, in securing structural safety, adequate exits and reasonable resistance to fire. To accomplish these purposes he is provided with a code or set of rules usually formulated by local architects and builders familiar with certain well known types of construction, but devoid of imagination and ignorant of the law. These codes vary greatly from city to city, agreeing only in a few particulars. First, they all reflect the customs and prejudices of local practice, and second, they all refer to the past rather than the present, and are all vague and difficult, if not impossible, to understand.

The inspector appointed to enforce these ordinances is often not the type of man best suited for the work. Too often his selection is made for political reasons and his engineering knowledge is sometimes very limited. It is encouraging to note that conditions in this regard are improving, at least in the larger towns and cities, but there is still much to be desired.

Dissatisfaction With Municipal Control

Considering all these factors, it is hardly surprising that there is a great deal of dissatisfaction on the part of the builders over the conditions of municipal inspection, or even that there are some well meaning persons who advocate the elimination of codes and municipal inspection entirely. I hardly believe that those who advocate this seriously contemplate depriving the public of its undoubted rights to protect its own interest in any building that may be erected. Their view is rather a natural reaction against a restraint that often appears arbitrary and unreasonable.

The elimination of municipal restrictions in any congested and highly competitive district would soon lead to so keen and ruinous a competition as would force the conscientious builder out of the competitive market. Possibly the best proof of the truth of this statement lies in the fact that whenever a town grows to a point where competition becomes keen, it is always the best class of architects and builders who demand a building department.

What Is Necessary to Improve Conditions

There are many difficulties in the operation of a municipal building department, but the fault lies not in the system which has proved itself the best means so far found of insuring to the public a proper consideration of its right, but rather in the operating of this system which is at present far from perfect. Improvement must come in two ways; first, by the appointment of better men as building inspectors; and second, by the improving of building codes so as to make them more modern and more logical.

To accomplish the first of these, architects and builders must take an active interest in their local department and see to it that adequate salaries are provided for this office. The selection of competent men must be urged upon the proper local officials, and when such men are appointed, they must be supported. So long as he is performing his duties, he must receive the moral support and encour-

By FRANK BURTON
President, Building Officials' Conference of the U. S. and Canada, Building Commissioner, City of Detroit

An address delivered before the Annual convention of the American Institute of Steel Construction, French Lick Springs, Indiana, Nov. 14, 1924.

agement of the right sort of builders to offset in some measure the discouragement incident to the administration of his duties in a fair and impartial manner. These activities are local in their nature and are best performed by local organizations which have representatives from all the different branches of the building trades.

In improving building codes, however, the work can best be done by national organizations of the various trades. A wise building official soon learns that he cannot vary from his code provisions at the request of one builder, however reasonable his demands may be, without arousing the active antagonism of all his competitors. He can, however, listen to the arguments of an organization representative of any industry and if fairly convinced of the justice of its arguments, recommend to his local council such variations in his codes as are just and reasonable. It must be remembered, however, that building officials as a class are pretty hard-boiled. They have to be to listen to the arguments of some inventors and promoters and not be carried away by their persuasive eloquence, and induced to make many foolish decisions. It is probably true that 98 per cent of all the new ideas and pleas for alterations of the code presented to the average building official are unwise and misconceived. We usually consider that engineers are men who deal in exact facts but in spite of this, we often find that they fall into the common error of other men and let their imagination run away with them. They think up all sorts of wild schemes based upon what they think is so, and are offended not to find a sympathetic listener in their building official.

Improved Codes Would Be Acceptable

What building officials want are facts derived from fair and impartial texts which represent as nearly as possible working conditions. I believe I can speak for at least the major portion of the building officials of the United States and Canada when I say that building officials are anxious and willing to assist in the correction of their codes so as to permit the most economical construction consistent with safety, and all that is needed is to convince them by properly presented data that the change requested is consistent with safety, all things considered.

Notable Progress in Concrete Codes

During the last few years progress has been made by the representatives of reinforced concrete in obtaining recognition of new methods and the establishment of higher stresses in building codes. These changes have only been made, however, by virtue of the collection of a very large amount of carefully prepared experimental data. The money spent upon this work has been quite large but I believe the results justify the expenditure. Competition from this source has been a serious factor in the structural

steel business and has in some measure dislodged structural steel from the monopoly it enjoyed a few years ago. In self defense, the structural steel interests must take steps to insure themselves a fair and just consideration of their product commensurate with the intrinsic virtues of structural steel. It is useless to criticize concrete and call it mud. We know that it isn't mud and in fact when properly made and used, is a remarkably safe and useful building material. What is necessary is for the structural steel industry to present the properties and merits of structural steel in a better and more convincing way than they have ever been presented before and for this purpose more accurate experimental data must be obtained and further this data must be extended to cover many points not yet touched upon.

Work Which Should Be Done

The work of the American Institute of Steel Construction in compiling the standard code has been an excellent step in the right direction. This one act alone has done more to present structural steel in a proper light to building officials than any other thing that could have been done. You must not rest here, however, as there is still much to be accomplished. There are many questions regarding structural steel yet to be answered, and an enormous amount of testing work must still be done. My suggestion must be that your institution encourage the further investigation of structural steel by establishing fellowships in some of our leading engineering universities and provide material and money for making necessary tests. The results of such tests, together with the most valuable test data hitherto obtained should then be compiled into a single volume so that it will be possible for the student of structural steel to refer to this data without the necessity of spending weeks and months searching old magazines for scraps of information.

A few points which occur to me and which are still undetermined are as follows:

(1). The area of stiffeners on a plate girder. Your standard gives a very clear discussion of the spacing of these stiffeners, which is a great step in advance but the question of the proper area is left open. There should be further investigation on this point.

(2). The value of structural shapes subject to torsion. This point is not covered and there is very little of value in engineering literature on the subject. In the Buildings Monthly issue of Engineering and Contracting, Vol. 62, No. 2, published August 27th, last, is some valuable data on light and heavy sections of 3, 4, 5, and 6 in. I's, which indicates that the torsional resistance of these shapes is from 5 to 15 per cent of what might be expected from the polar moment. This data is valuable, but is not sufficiently complete.

(3). Rivets in tension. These are used occasionally in spite of the prejudice against the practice. In testing some sixty rivets driven with air hammers by some five or six different shops, I found recently that the actual elastic limits in pounds per square inch was from 34,000 to 39,000 lb. and the ultimate strength from 60,000 to 64,000 lb. The results were very consistent and indicated that rivets might be safely used in tension with a stress of 16,000 to 18,000 lb.

(Continued on Page 29.)

Asphalt Industry Regards Future with Confidence

That street and road building upon which the asphalt industry depends for its principal market, next year will far outdistance 1924 construction is indicated by the vast amount of work involved in federal, state and local highway programs already mapped out. The housing and building industry too, which affords another heavy market for asphalt shingles, roll roofings, paints and waterproofings, is also undergoing a decided stimulus and the indications are there will be no let down in that direction. Wherefore the asphalt industry views 1925 with optimism, believing that the coming year will witness a substantial increase in business over 1923 and 1924.

Asphalt Consumption

The two industries of paving and roofing now consumes most of the asphalt produced in America, 54% of all asphalt going into roads, 38.5% into roofing and waterproofing and 7.5% into miscellaneous products. The asphalt industry did not suffer from the general trade depression in 1921 for the figures of the U. S. Geological Survey show that asphalt produced that year amounted to 94.5% of the production in 1920. The total asphalt sales, including those of native lake, rock, domestic oil and imported oil asphalts, in 1923 amounted to 2,919,247 tons valued at \$33,865,756. In 1922 these sales amounted to 2,499,759 tons with a total value of \$27,538,975. The figures for 1921 are 1,957,260 tons sold and \$23,924,452 value. The sales for 1920 totaled 2,073,186 tons and their value was \$28,539,843. It is at once apparent from these figures that the year 1923 was, up to that time, the banner asphalt year, since the sale of asphalt and related bitumens in the United States increased that year 16.8% over 1922 in quantity. Sales of asphalt have continued heavy throughout 1924 and there is no reason to believe that the showing for the past year will fail to reveal the usual rate of increase in tonnage sold.

Surfaced Highway Mileage

According to the U. S. Bureau of Roads the mileage of surfaced highways in this country is now well over 400,000 miles, of which 35,000 miles

By George W. Craig, Manager, Middle Western Branch, The Asphalt Association

were constructed in 1922 and 40,000 miles in 1923. It is confidently predicted that the 1924 and 1925 seasons will see close to 90,000 miles of surfaced highways added to the country's network of good roads. This system now embraces 2,819,386 miles of highways, all told. Of the improved roads 175,000 miles are gravel, 100,000 are macadam, 28,000 are concrete, 10,000 are brick, stone block and miscellaneous types and 35,000 miles are sheet asphalt, asphaltic concrete and other asphaltic types.

Due to recognition of their shock-absorbing characteristics under heavy traffic as well as their resistance to moisture and temperature changes, there has been a tremendous increase the past six years in asphalt highways. Last year 108,000,000 square yards of asphalt pavement were constructed,—an increase of 18,000,000 square yards over 1922, and sufficient to construct 10,200 miles of roadway 18 feet wide or to replace all the paved streets in the cities of New York, Chicago, Detroit, San Francisco and New Orleans. The asphalt pavements laid in 1923 too, would profile three roads from the Atlantic to the Pacific coast each 18 feet wide or would form between those points one great roadway carrying six lines of motor traffic.

City Pavements

City types of paving are inventing the rural districts to such an extent that, of the types higher than waterbound macadam, asphalt roads now predominate. The extraordinary demand for smooth, shock-absorbing pavements is due to the fact that 16,000,000 motor vehicles now use American highways as well as to the progressive spirit of America's rural communities which have come more fully to appreciate the fact that their prosperity is in proportion to their accessibility and is, therefore, largely a matter of good roads. Thus it is that in California, Oregon, Washington, Nevada and Arizona, for instance, the yardage of asphaltic base ("Black Base") pavements alone has increased 800 per cent in six years.

The Michigan, Virginia and North Carolina departments are now using asphalt base pavements on some of their trunk line roads. The Brush College road is the first "Black Base" highway in Illinois. Several other states which heretofore have built rigid pavements are considering "Black Base" for next year.

Asphaltic pavements now comprise 54.9 per cent of all pavements higher than waterbound macadam in the 65 cities of the country having 100,000 or

more population. Percentages for other types in these cities follow: Brick, 19.3 per cent; wood block 4 per cent; stone block 14.5 per cent; Portland cement concrete 3.5 per cent; and miscellaneous 1.4 per cent. Because of the popularity of the more durable and easy riding city streets, municipal types of paving have taught motorists to demand better rural highways.

1924 Record

The year 1924, despite labor unrest and high prices, set a remarkable record in building construction in the United States. In the first nine months, new housing contracts totaled more than during the same period in any previous year of the nation's history. The value of the new homes constructed during that time is in excess of \$2,800,000,000 and 71 per cent more than the building contracted for during the same period in 1921.

One feature that investigation of housing construction in 1923 and 1924 has developed, is the great percentage of new homes now being built by laboring men. Another indicates that substitutes for wood are now used in greater volume. These include steel and other metal frames and fittings, asphalt shingles and roll roofings.

Builders of new houses seem too, to be taking more to heart the lesson that government officials and conservationists have been driving home for years,—the lesson that the timber supply of America must be conserved. And in learning this lesson they have found that not only can substitutes for wood be used to advantage but that these substitutes make for economy, add to the life of the structure and reduce the costs of insurance and maintenance.

The reports show that the average builder also is demanding all the fire and cyclone protection he can secure without unduly increasing his costs. If he lives in a section where violent windstorms occur, he is laying a roof that will "stay put." Where he encounters heavy fire risks he is seeking a material that has great fire-resistant qualities. A roofing material of proven merit both from the storm-resistant and the fire-resistant standpoint that is now being most widely used is the asphalt shingle.

Manifestly the needs of the nation both in new street and road construction and in providing housing facilities for the people will call for a vast program not only in 1925 but for years to come. In addition the year will be, time, an increased demand for asphalt as material for resurfacing the older roads and streets and for re-roofing and repair purposes. There is nothing, therefore, in the immediate present, at least, which would justify anything but optimism as to the future of the asphalt industry.

(Continued from Page 28.)

(4). Electrically welded connections. These are coming into use and will eventually be a great assistance to the industry. Such tests as I have been able to make indicate that the results are very uniform and that the actual section of the weld will resist from 47,000 to 48,000 lb. per sq. in. in tension. I have been unable to learn much about its resistance to shear but it appears to be fairly high.

(5). Fireproofing of steel. Undoubtedly many of our present methods of fireproofing are unnecessarily expensive and some of them are very faulty. Economy in fireproofing would give a

great competitive advantage to structural steel. Nevertheless very little intelligent work has been undertaken. We have many theories as to fireproofing, most of which are probably wrong. Experimental work has progressed slowly because students have confined themselves to large and expensive tests. I have found it possible to obtain much valuable data with a small sized furnace that can be operated by one man at a cost of a dollar or two a day.

(6). Wind pressure. Our knowledge of wind pressure at the present time is very inadequate and there is no doubt that a great deal of money is

spent annually in providing unnecessary wind bracing. The first step in solving this problem is to determine accurately the wind pressure on models of buildings. This can be done in a wind tunnel and I hope that the Massachusetts Institute of Technology will attempt some work on this within the next year.

These are only a few of many points that might repay big dividends on the money invested for making a thorough investigation. I believe that it is to the interest of the industry to demand that it provide the means for making these and other investigations.

FITZHUGH BUILDING, SAN FRANCISCO

Reid Bros., Architects. P. J. Walker Company, general contractors.
A one-million dollar structure completed in 1924 at the northeast corner of
Post and Powell Streets. Ten stories and basement Class A construction.

A GLANCE AT ONE CORNER OF SAN FRANCISCO, WHERE TEMPLES
OF BUSINESS ARE BOTH TOWERING AND BEAUTIFUL.

San Francisco's New \$3,000,000 Sky-Scraper

San Francisco's tallest building, the twenty-six story coast division building of the Pacific Telephone and Telegraph Company, is fast nearing completion in the southwest line of New Montgomery Street between Minna and Natoma streets. The \$3,000,000 structure is designed free from the fussy application of motifs of classical antiquity, in sheer solidity, with jagged face and tapering silhouette, resembling the stony pinnacles of the Sierras.

While first glance gives the impression of the Gothic Architecture the new home of the Pacific Telephone and Telegraph Company by no means follows that style. Its facade is purely a cloak for the great pile of steel and concrete, expressing on the face the sinews within. Efficiency, strength, light and air are the aims sought and wherever necessary mere ornament has been cast aside for utility. But this does not mean the building will be less beautiful than any in the West. On the contrary, it will rank as the show-building of San Francisco.

This is the largest building on the Pacific Coast for the exclusive use of one concern, having a floor area of 280,000 square feet and rising 453 feet from the sidewalk.

While all the executive, administrative and clerical forces of the telephone company will be drawn from eight buildings now occupied by the company in various parts of the city to be housed in the city's latest sky-scraper, not one floor will be devoted to operative uses. All present exchanges and several others will continue full strength, besides the new exchange in Bush street west of Kearny street.

Perfect daylight is insured by the building's position, with streets on three sides and low buildings on the fourth. It has a frontage of 160 feet in New Montgomery street and 147 feet in Minna and Natoma streets. At present, an "L" shape plan is being executed, but provisions have been made for future additions which will eventually result in "U" shape,

Two floors underground will accommodate the building's mechanical plant and provide storage room for records and supplies. Automobiles will be stored in the upper basement and in the first floor yard. Nine high-speed elevators will make steps at twenty-nine floor levels.

Welfare and comfort of employees have been given first consideration in the design. A women's cafeteria on the twenty-second floor, assembly hall

The cafeteria for women employees will be located on the twenty-second floor; the chief engineer forces on the twenty-third, twenty-fourth and twenty-fifth; restroom, library and assembly hall on the twenty-sixth. The lower floors will be occupied by the various business, technical and executive offices.

Excavation for the foundation entailed some of the most exacting engineering ever required in construction of a San Francisco skyscraper. With two basements below the street level, the bottoms of the footings are forty-five feet below the sidewalk. These basements contain the mechanical apparatus, a garage, storage space for the voluminous records of the company, and a storage tank of 120,000 gallons connected to a system of distributing pipes for fire protection.

Plans for the structure were prepared by Architects J. R. Miller and T. L. Pfeuger and A. A. Cantin, associate. Lindgren-Swinerton, Inc., of San Francisco, are the general contractors.

The erection of this twenty-six story structure, the tallest building in San Francisco, is but a part of the extensive building program contemplated by the Pacific Telephone and Telegraph Company. New district exchange buildings have been erected and plans are in progress for additional buildings and expansions to standing structures.

Construction has been completed on the three story Franklin Station in Larkin street near Bush at a cost of \$250,000 and for a \$100,000 station in Capp street near Twenty-fifth, in addition to a six story and basement structure in Bush street near Grant avenue. The latter building represents an expenditure of \$750,000.

PACIFIC TELEPHONE AND TELEGRAPH BUILDING

J. R. Miller and T. L. Pfeuger, Architects; A. A. Cantin, Associate Architect. Lindgren-Swinerton, Inc., General Contractors

This twenty-six story, basement and sub-basement commercial spire takes its place in a skyline of skyscrapers such as the Standard Oil, the Hobart, The Pacific Gas and Electric, the Matson, California Commercial Insurance, Balfour, Claus Spreckels, Mills, Merchants Exchange, Alexander and others in the San Francisco Downtown Section

and library on the twenty-sixth, and promenade and recreational space on the roof are features. In the arrangement and finish of the interior, sanitary, noiseless floors and special lighting systems are to be installed. The building will be ready for occupancy in July, according to present plans. The 1500 employees and executives have already been assigned places on various floors.

State Board Should Pass on Public Works Contractors

By WILLIAM B. JOYCE
Chairman, National Surety Company

"It appears to me there is nothing more vital to the future of general contracting and surety development than the elimination of irresponsible contractors. We are irrevocably determined to contribute our money and effort in co-operation with the good contractors in this endeavor.

"I think one of the most important steps is the creation of a State Board to examine into the eligibility of all persons, firms or corporations who contemplate entering into contracts on public works.

"There are altogether too many incompetent and dishonest men entering the contract profession. The effect is bad on the public, on the honest and capable contractor and on the surety companies, who, by false financial statements and 'cooked up' references are led into the error of signing the bonds of these people.

"The reason why surety companies suffer so many losses on contractors' bonds, is because:

First: In at least 50 per cent of all of the cases of loss sustained by surety companies in the United States, it is disclosed, after the default happens, that the contractor lied about his financial condition.

Second: In at least 50 per cent of the defaults is due to what we learn after the default— incompetence on the part of the contractor.

"Thus, it appears that if we could eliminate alone the incompetent contractor, our loss ratio would be at least 50 per cent less than it is now, and if we could eliminate the untruthful contractor, the one who makes fake financial statements, we could expect another decrease of 25 per cent in the losses.

"The managements of the Surety Companies naturally resented what clearly appeared to be an accusation that the Surety Companies were executing bonds where they had every reason to believe that there would be a loss." Indeed, the accusation uses the expression "where it was obvious there

would be a loss.' The surety companies of this country have been misguided in some things but they have not been so foolish as to allow bonds to be executed where 'obviously' there would be a loss.

"Of course, the surety companies are influenced in their decisions by the representations made by their agents, and I am willing to make any wager that no officer of any surety company, no matter how poor its management may be, has ever authorized its agents to execute any bond where the information reported by the agent was unfavorable to the contractor.

"It is all very well for people to criticize surety companies for having written a bond on this or that contrac-

The following remarks by Mr. Joyce are taken from a personal letter to the editor of the Los Angeles Builders' Exchange Bulletin and are published with their permission—Editor.

tor who had defaulted. There are a great many people in the 'I told you so' class. If our critics had been as much interested in us before the contractors had defaulted as they were after the contractor defaulted, these critics would have warned us not to execute this or that contractor's bond.

"It is one of the strangest things in the world how much favorable information we can get before we sign the bond, and what a quantity of unfavorable information we can get about the contractor after he defaults. It will be a pleasant day for the surety companies and the good contractors of this country when the contractors will wholeheartedly warn surety companies not to execute bonds for contractors who have bid too low, or who are dishonest, or who are incompetent.

"Of course, occasionally, we find a dishonest surety company agent who will make favorable representations to his company about a contractor that really is unworthy, but that kind of an agent is the kind of an agent who would make a rebate. They will practice fraud on the contractor, or their company—it makes no difference to them—as Sir Walter Raleigh would say, "Therefore, from a rebater and a man slayer, bless thyself, for the best profit and return will be this—that if thou acceptest a rebate from a dishonest man, thou wilt be subject to dishonesty at his hands."

"Perhaps no company in the world has executed the number of contract bonds executed by the National Surety Company and perhaps no surety company in the world has had so many losses.

"It is not too much to say that the National Surety Company alone could very well afford to pay \$250,000 to \$500,000 a year for some system that would give it immunity against a repetition of its contract bond losses in the last five years, which have aggregated approximately seven million dollars.

"Let no man criticize us for sustaining a loss on any contract bond unless that man had unfavorable information about the contractor before the bond was executed and warned up not to execute it.

"Another thing—if contractors want to do business with the best element in the surety business—I mean the element that stands for everything that is right and square, they must stop accepting any rebate or commissions from dishonest surety agents, for any agent that rebates a part of his commission is dishonest and the contractor is aiding and abetting his dishonesty.

"If there be any company or agent who offers a rebate or by low, cunning methods deals unfairly with their competitors, then I say to you and to all the world, that they represent the very worst element in the surety business, and stand for all that is bad in the business.

"My advice is to scorn such men."

Road Chiefs Urge Uniform Highway Marking

One of the important subjects discussed at a recent convention of the American Highway Officials Association was that of a uniform system of highway signing throughout the United States. It seemed to be the consensus of opinion that some uniform plan should be worked out under which standard signs would be used for all purposes, such as railroad crossings, curves, slow, danger, etc. In addition the plan discussed provides that all routes shall be given an identification number which shall be retained for the full length of the route across the country, such route number to appear at frequent intervals along the route. With such a uniform marking system and with proper guide maps giving the route numbers, a tourist may follow a given route by number to his destination, and at no time be in doubt as to the proper route to follow. Furthermore, the plan proposed would serve to eliminate much of the friction resulting from the indiscriminate naming and signing of routes by highway and trail associations. The final action of

the Association was to place the matter of working out a uniform marking plan in the hands of the Bureau of Public Roads, and the following resolution was adopted:

WHEREAS, this Association has adopted the report of the Subcommittee on Traffic Control and Safety, recommending the immediate selection of transcontinental and interstate routes from the Federal Aid Road System, said routes to be continuously designated by means of standard highway marking signs and protected by standard traffic warning signs; and

WHEREAS, this system of highways when established and marked will satisfy the demand for marked routes on the part of transcontinental and interstate traffic, thus meeting the need which has been met in the past in a measure by the marked trails established by the reputable trails associations; and

WHEREAS, many individuals have sought to capitalize the popular demand for interstate or cross-county routes by organizing trails, collecting large sums of money from our

citizens and giving practically no service in return, with resulting discredit to the reputable trails associations which have heretofore rendered distinct public service by stimulating highway improvement, maintenance and marking;

NOW, THEREFORE, BE IT RESOLVED, That this Association hereby recommends to the several states that the reputable trails associations now existing be permitted to continue their markings during their period of usefulness, pending the establishing of the proposed marking system, unless such action shall conflict with the marking systems and policies now in force in the several states; and

BE IT FURTHER RESOLVED: That no trail association be permitted to establish further routes on State or Federal Aid routes; and

BE IT FURTHER RESOLVED: That we hereby warn the citizens of this Nation to investigate, carefully the responsibility of trails organizers and demand convincing evidence insuring proper expenditure of funds before contributing to or otherwise supporting such agencies.

The Romance and Development of the Construction Industry

The construction industry to many individuals contains little that is romantic, but to the real builder, who has a proper conception of the vital part he is playing in the development of civilization, there is opened a world of romance. The industry itself goes back almost to the beginning of time and with the possible exception of agriculture is the oldest known vocation. Construction antedates the art of writing, and much of our present knowledge of the way in which the people of long ago lived is gained through a study of the ruins of cities of those days. Homer in his *Odyssey* immortalized the primitive architecture of many of these ruins, as did other writers of his period.

The builders of prehistoric times built with a permanency that might well be emulated by those in the industry today. Witness the Pyramids of Egypt, the Wall of China and later the great cathedrals and monasteries of Europe. There was a pride of workmanship and skill that has largely been lost and as a result the buildings of today will not present to future generations the true picture of life as it is being lived.

The history of this United States is closely interwoven with that of the builders of the early days, for without the art and skill of the builder this country would still be inhabited by primitive savages and we would not have established a nation that has taken first rank among the countries of the earth.

Credit to Pioneer Builders

Therefore, the people of this country owe a debt of gratitude to those early pioneer builders who have given us so much and to their descendants who are today furnishing us with homes, schools, churches and a multitude of buildings which make for ease and comfort of everyday living. It is to these builders that this article is dedicated in the hope that there may be developed a better understanding of some of the problems which they have to face.

The construction industry has grown by leaps and bounds, especially during the last few years until now it is the second largest in this country. It is the backbone of our entire business structure according to a statement made recently by Secretary of Commerce Hoover.

Magnitude of Industry

As an example of the magnitude of the industry now as compared to the pre-war period, it is interesting to note that during the year 1914 the rate of building permits issued in the entire United States amounted to only about \$900,000,000, while according to S. W. Straus and Company approximately \$5,750,000,000 were expended for construction in 1924. Building permits in the city of New York last year amounted to \$843,270,328, a sum almost equal to the amount expended in the whole country but ten years before.

As another indication of the magnitude of the construction industry, the United States Department of Labor recently published some figures which show that 2,500,000 men are employed in actual building operations, while another 2,500,000 are engaged in the manufacture and transportation of building material. In other words, one eighth of all people gainfully employed in this country are dependent upon the construction industry for their livelihood.

Any industry which has had such a remarkable growth within a decade naturally has some important problems

By A. W. Dickson, Executive Secretary
National Association of Building
Trades Employers

to face, upon the proper solution of which depend largely its future.

Labor's Part in Industry

The problem of first importance therefore is the one having to do with labor. Every element of construction is interested in the labor question, because all of the material used are fashioned, fabricated and erected largely by human hands. In this article, however, the particular phase of labor to be treated will be the skilled mechanic employed in actual building operations.

The labor shortage, especially among the skilled trades, has assumed alarming proportions of recent years due to two causes; namely, the comparatively small number of apprentices learning the trades, and the exclusion of skilled workmen from Europe through acts of Congress.

It is estimated that 35,000 skilled mechanics are required each year in the building trades to replace those lost by death, retirement and other causes. An recent survey of the work being done in the apprenticeship training movement published by the Federal Board for Vocational Education shows that there are only about 5000 boys in this country classed as apprentices now in trade schools. Under the new immigration law, it is estimated that less than 13,000 skilled mechanics will be admitted annually from Europe. It becomes apparent, therefore, that one of the problems the builder of today has to solve is the one having to do with the labor supply not only of the future but of the present.

Five Day Week Demand

Another serious aspect of the labor situation is the demand for the five day week, which has been made by certain trades in the East and in a number of localities, is already in operation. In the city of Boston plasterers and painters are only working forty hours a week. In New York the painters injected the five day week into their agreement last year, and in Philadelphia the plasterers have added Saturday to an ever increasing list of holidays. The plasterers, lathers, painters and glaziers in the city of Cleveland have demanded the forty four hour week this year. At the last annual convention of the United Brotherhood of Carpenters and Joiners of America a resolution was adopted authorizing carpenters in those cities where there is a District Council to take a referendum vote on the five day week matter.

At first thought this may not seem so very important but a careful analysis shows that a reduction of four hours a week means a loss of nearly 10 per cent in actual working time, which considered in the light of the acute labor shortage in most of the major trades assumes alarming proportions.

A conference attended by representatives of a number of the larger cities of the East and Middle West, held in Cleveland on January 5, 1925, went on record as being opposed to any further curtailment on the part of the building trades in the number of hours worked.

The general public as well as the builder is interested in these matters because the only hope of lower building costs lies in an adequate supply of skilled mechanics in the industry.

Trade Disputes

Another important problem the builder has to face, especially in the larger cities, is the numerous disputes between the trades as to which craft will perform certain operations. Fortunately for the industry there was created a few years ago a tribunal known as the National Board for Jurisdictional Awards for the purpose of equitably settling disputes of this character. The industry has been saved thousands upon thousands of dollars as a result of the untiring efforts of this board.

The question of organization has been too much overlooked on the part of contractors and while the workers were building up a powerful machine, the building trades department of the American Federation of Labor, the employers stood idly by. As a result of this lethargy on the part of the employers the trades are now in a position to dictate terms which, however unsatisfactory they may be the employers have to accept. There has been a marked change, however, during the past few years and the contractors of the country are beginning to realize that the time has long since past when it was possible to play a lone game. Associations have been organized and are being organized in all parts of the country, and ultimately the employers will be in much better position than they are now.

Employers Organize

Realizing the utter futility for any isolated group of contractors to solve many of the larger problems of the construction industry a number of employers met a few years ago and organized the National Association of Building Trades Employers. The object of this organization as set forth in its constitution are: "to unite into one national body for mutual protection and benefit, associations of building trades employers throughout the United States; to encourage and assist in the formation of local and state associations of building trades employers; to prevent strikes and jurisdictional disputes; to assist member associations in the adjustment of labor questions; to work for the general welfare of the building industry and to create and maintain uniformity, harmony and certainty in the relationship between employers and employees; to oppose any unlawful and unwarranted interference with the rights of contractors in the pursuit of their calling."

Like all such movements, the progress has been slow but the foundations have been well laid and the time has now arrived for commencing work on the superstructure. A strong national association of contractors could make the business of contracting a real profession, safeguarding it against those who are not qualified to be in it. Such an association would tend to stabilize conditions to a great extent and eliminate many of the hazards now incident to the business.

The public should be vitally interested in this matter because every individual comes more or less in daily contact with the construction industry, and every movement which has as its objective the stabilization of conditions in the second largest industry of the country is entitled to the active support and co-operation of every one.

Safety In Construction—A Moral and Economic Necessity

The safety movement in our city is no longer a matter of choice, it has developed into team action of the keenest minds of all the industries of Milwaukee. It has developed to the point where an operating board meets regularly each month, developing the best methods of procedure to be used in our general monthly meetings and working to a climax at our annual banquet. Any person seeing 5000 fore-ladies and foremen gathered to urge each other on to finer things in safety work would be stimulated with a fervor for this work that would never leave.

I feel as if I were stepping out of the pages of the Bible to do the good Samaritan work there recorded.

It may not be possible for me to make the blind see, the crippled walk, or the human being invalidated through gases, poison fluids, etc., but may I not instill in you renewed efforts of safety, both for accident prevention and the reduction to a minimum of occupational diseases, so that your fellow co-laborers may be spared forever the pangs of any of these calamities.

The minds of your general board that gave this subject to me—Safety No Longer a Matter of Choice—probably do not think of this movement as I do.

There is no longer a choice in the safety movement; I believe the men doing their mite to make the safety work successful are in it for the love of keeping the homes of you, your neighbors, and myself free from sorrow and anguish.

We are doing in our little way what Jesus did for all of us, and if we are just a little bit more successful in keeping Molly or Kate or John or Bill on the job, we have reason to feel a divine joy and our efforts in these enlightened times will not be rewarded with thorns and bile.

But the results of safety work are not only less disability.

Need for Economies

My friends, the crying need of this country today is economies; yes, gentlemen, less expense. Unless we are a people that God specially picked out to bestow all the blessings of mankind on, while other human beings are slowly eaten up by disease or starving, we must sooner or later come to a reckoning.

If we will do our share in accident prevention we will contribute to the economical welfare of our fellow-workmen and men.

As a concrete example of this work, I wish to leave with you a few salient facts developed by our Mutual Com-

By William F. Tubising, of Wm. F. Tubising Co., Milwaukee, Wis.

panies, which show that safety work is not a matter of choice, but a dollar and cent matter for every person, be he a laborer or a person of leisure.

In 1916, before all constructors were bending their efforts to keep down safety work it cost \$2.60 on carpentry.

Now, in 1924, when everything is costing you twice what it did in 1916, your compensation cost is less.

Figures Tell Story

In 1916 the death claim was \$3,000.00. Now it is \$5,800.00, but in spite of this the rate on carpentry today is \$2.26, and so it is in all the other classifications of the Construction Industry.

In our state in 1920 there were 16,246 accidents; in 1923 there were 20,941. Medical aid amounted to \$569,574.00 in 1920, and to \$924,032.00 in 1923. Total indemnity was \$1,976,513.00 in 1920, and \$2,734,938.00 in 1923.

Now, what would this mean, if you could reduce this by one-half through able safety work?

One million three hundred and ninety-seven thousand four hundred and ninety-nine dollars would build twenty-four-room schools in your state, or lay 60 miles of concrete roads, or give 400 men a home of their own to live in, or start 40 average community factories, or build five of the best State Normal Schools.

It would be possible for me to spend hours telling you all the good things the safety movement gets its community through organized effort in dollars and cents, and joy and blessings instead of poverty, grief and sorrow, but time will not permit.

You owe to the well being of your family to be in the safety work. You owe every effort you can put into it to your fellow-workers. You owe your community through organized effort a newspaper free from columns of accidents each day.

But let us get closer to home—in my own company—I know of three men whose lives I saved—here is one of them.

Timely Treatment

Julius Priegel scratched his hand on the inside of the palm, just a small little silver scratch. On my visit to the job I inquired where he was and my foreman answered he was at his home on account of his hand. I immediately (for we want every man who gets scratched in any to go at once to the company's doctor) went to his home. Priegel had gone to the doc-

tor near his home; the doctor had made a casual examination, told Priegel to go home and put the hand in hot water. But what happened to Priegel? He had passed a night of torture—the poison was going up his arm; his family, when I told them he must go with me at once, got up in arms against me. With all this occurring, I confined myself solely to Priegel. I told him to get his hat, that if he wanted to lose his arm or cash in—why he could stay where he was. He finally decided to go to the hospital with me and I want to tell you men that we had a hard time saving his life. But the treatment of the company's doctor finally won out.

Here is an instance to show how persistent we must be in this work. Here is the best argument why your men should be treated by the company's doctor. Here are the cold facts that the best first aid is the cheapest for you. Control of these things will lessen fatal accidents and bring about smaller compensation rates.

Money Getting Features

It would not be well for me to pass this subject without calling attention to the salient money getting features:

1st—Increased efficiency of the men.
2d—Promotion of loyalty and co-operation.
3d—Reducing labor turnover to a minimum.

4th—Increasing production.
The obtaining of any of these four is worth the effort.

It behooves us, indeed, to put our hands on the pump handle for "little leaks sink great ships."

When the protection of the mechanical equipment on the job has been thoroughly done, when the scaffolds, ladders and ropes have been properly inspected on each job, when all openings are properly barricaded, when the foreman has instilled in each workman the value of safety work—then shall you all reap the fruits of this work in lower rates and the personal satisfaction that you have done something for the other fellow—for—in the long run the other fellow is very close to you and your happiness depends on his happiness.

It certainly behooves every state to get together on the safety work—to benefit by what has been done and by the co-operation of the constructors bring about that equity of rates that the Construction Industry needs. Let us all do our mite to bring about all the economies we can.

Let us be strong men, ever watchful, our eyes always on our motto, "Universal Safety."

ROCKEFELLER TO BUILD WORKERS IDEAL HOMES

John D. Rockefeller, Jr., is behind a movement headed by the Empire Mortgage Company of New York to bring the first "garden tenements" to Manhattan, by constructing a block of wage earners' ideal homes on the East Side.

Each of the experimental tenements will face on a garden, with a playground for children, and the homes will be so arranged that every room will get sunshine and fresh air, and each family will be provided with one or two bathrooms.

It is planned to keep the rentals near the level now paid by tenants in New York slums.

AUTOMATIC BRICKLAYING MACHINE

Laying 1200 bricks an hour by electricity is the claim by the inventors of a new machine.

A traveling boom, equipped with a mortar tank and laying mechanism, is set upon rails around the outside of a building. One rotating wheel takes two bricks at a time from the carrier while another spreads mortar as the carrier moves along the boom.

On reaching the end of the wall the machine changes direction and proceeds as before until it has laid a row of bricks entirely around the building. Then the boom is raised the thickness of a row and another trip begins. A three horsepower electric motor operates the mechanism.

SALT WATER HYDRO-ELECTRIC PLANT FOR ENGLAND

The first hydro-electric generating plant actuated by the rise and fall of the ocean's tide is now being built at West Mersea in Essex, England, and will shortly be put into commission. A huge tidal basin fills at high tide and drives the turbines of the plant as this sea water flows out during low tide. In addition there is a second basin located higher up than the high-tide basin which drives the turbines of the generating plant during high tide. In this way there is a continuous production of electricity. The first generating unit of the West Mersea plant will, when put in place, produce 4,000,000 kilowatt-hours of electrical energy annually.

The Mac Arthur Concrete Pile

Staff Article

The history of the MacArthur Concrete Pile & Foundation Co., Inc., of New York and San Francisco has been one of continuous progress. This company found very early in its history two outstanding facts connected with molded-in-place concrete piles. The first was that a wet mixture of concrete should not be placed without a casing to protect it. The second was that a permanent casing was a detriment and not an advantage.

The above sounds somewhat paradoxical but the answer was found by the MacArthur Concrete Pile & Foundation Company in the shape of highly compressed dry-mixed concrete. A sloppy mixture of concrete is liable to distortion from adjoining piles, while concrete piles in a light metal casing must be a wet mixture since it gets none of the ordinary spading and tamping that is commonly used when placing concrete. Excess water in concrete, however, means a loss in strength from 25% to 50%. In the MacArthur system the concrete is placed with only sufficient water to bond it. The form in which the concrete is placed is ultimately withdrawn, but while being withdrawn the concrete itself has a weight of seven tons resting on it. This not only is more than the equivalent to any spading and tamping but also avoids excess water, makes concrete so dense that it cannot be distorted by the driving of adjacent piles and gives the maximum skin friction obtainable through pushing the concrete into contact with the soil as the casing is withdrawn. The kind of shaft that is being obtained

can readily be gauged by watching MacArthur Piles being driven, when it will be seen that the weight resting on the concrete steadily drops as the casing is withdrawn.

Advantages of Pile

Another outstanding advantage of the MacArthur system is that it can cover all conditions that arise without change of rigging and consequent loss of time with its attendant expense. The standard pile is the Straight Shaft Compressed pile. However, a concrete pile ceases to be economical when over forty feet and sometimes satisfactory soil cannot be found within forty feet. The MacArthur Company in such cases can make a pedestal and thereby often obtain sufficient bearing within the aforesaid length of forty feet; thereby saving in many cases a very great length of piling and in consequence, considerable money.

Should however soil not good enough, even with the pedestal, to carry the required load within the length of forty feet be found, the MacArthur composite pile can be resorted to. The trouble with composite piles in the past has been the uncertainty of alignment. In all other composite pile systems the wooden pile is driven down first and then driven on by a follower which ultimately holds concrete in the upper section. Should the wooden pile strike a boulder or other obstruction during the second part of this operation, it is liable to be deflected

from the vertical while the follower is in. This results in an angle with its apex at the joint between wood and concrete and renders the pile of dubious value.

Recent Installations

With the MacArthur system however, the form for the upper section of the pile is driven first and the wooden pile is driven through this form, the top of the wooden pile being left some feet inside the casing. The pile is then completed in the ordinary way, alignment being not a matter of conjecture, but an absolute certainty.

During the last few months the MacArthur Concrete Pile & Foundation Company has installed the piles for a three million foot gasholder at Sacramento, another at San Jose and in addition to these have performed a contract for the Sacramento Gas Company and two for the Pacific Gas & Electric Company in Oakland. Under one of the tanks straight shaft piles were used and a test was made up to seventy tons on one pile. No settlement showing under seventy tons the pile was loaded to eighty tons, when settlement of .013 of a foot was shown. On the other gasholder pedestal piles were used and similar satisfactory tests made. Both holders were installed by The Bartlett-Hayward Company on MacArthur piles.

The last contract performed for the Pacific Gas & Electric Company was for a Lamp Black Separator. The pile driver is shown in operation in cut accompanying this article.

DRIVING MAC ARTHUR CONCRETE PILES FOR LAMP BLACK SEPARATOR FOR
PACIFIC GAS & ELECTRIC COMPANY

Industrial Lighting

By Chas. J. Stahl, Manager, Illuminating Engineering Bureau, Westinghouse Electric Manufacturing Co.

In the past ten years there has developed a greatly enhanced appreciation of the value of good industrial lighting, brought about principally by the following developments.

1. Industrial research conducted by the manufacturers of lighting equipment in co-operation with central stations supplying electric service.

2. The production of better lamps and media for the efficient control of the lightly directly to the purposes for which it is required.

3. The demand for increased production and decreased production costs.

4. The educational work of the societies and associations represented by this gathering including the Illuminating Engineering Society and others.

5. Last, but not least, the necessity of conserving the human eye under the demand for greater accuracy and the necessity for reducing the appalling number of accidents brought about by the use of powerful machines, overlapping operations and the desire for speed.

Adequate lighting results in the following benefit as set forth in a recent publication issued by the National Safety Council:

1. Reduction in accidents, greater accuracy in workmanship, decreased spoilage of product, increased production for the same labor cost, lessened eye strain, better working conditions, less labor turnover, better order, cleanliness and neatness in the plant, easier supervision of the men.

Coincident with the changes in the general public's attitude toward the value of good industrial lighting has come a fundamental change in the attitude of the manufacturers of lighting equipment. In the past, their efforts were to sell more lamps and more reflectors with little concern as to their proper application and use. Today their attitude is to sell illumination. Manufacturers now have engineers and scientists engaged in determining the effects of different intensities and other qualities of various grades of arti-

cial lighting upon human efficiency, happiness, national economies and social developments.

Artificial lighting in industry is now regarded as the potent agent of constructive force and it is steadily exerting a greater influence and benefit upon our civilization. It is known to be of first importance in the prevention of accidents. It is a great aid in solving the problems of night traffic in our cities. The right or wrong use of lights will conserve or impair the eyesight of the younger generation which is soon to enter the great army of industrial workers. Conservation of eyesight is of great economic benefit and is an assurance of fewer needless accidents in years to come.

Lighting codes so far established are virtually safety codes for they deal with very moderate intensities over all shop areas. The proper degrees of illumination from considerations of manufacturing efficiency are above those specified in the present codes. In general, the enforcement of lighting codes has been quite as beneficial to the manufacturer and society as a whole as to the individual workman.

STANDARD OIL BUILDING—SAN FRANCISCO

One of the few skyscrapers completed in San Francisco's financial district during the year 1924. A three million dollar structure. Geo. W. Welton, architect. Lindgren-Swinerton, Inc., general contractors. In the center background is shown a section of the Mills Building; to the extreme background the Merchants Exchange Building and in the immediate foreground, the Chancery Building. The latter was completed in 1921.

President Coolidge To The Contractors

There are certain particular reasons why I have been glad to avail myself of the opportunity, afforded by your presence here today, to make some remarks to the members of this association. The importance of construction among the country's industries hardly needs any testimony. A recent analysis reached the conclusion that the national income in 1924 was \$53,600,000,000, of which approximately \$6,000,000,000 was expended for construction. That is, over 11 per cent of the income. Constructions of one kind and another largely represent the accumulated wealth of a community, and it is, therefore, important that they be erected at the lowest feasible expense consistent with a high standard of permanence and usefulness.

During the war, owing to more intense demands upon producing capacity, construction was neglected and an enormous construction deficit resulted. The necessity of restoring the balance was realized when peace returned, and we have had an era of high construction activity in recent years.

Governmental Construction as a Balance Wheel

At the Unemployment Conference called by President Harding, and held here in Washington in 1921, the importance of construction as a balance wheel in the industrial scheme was strongly emphasized. The suggestion, of course, was not new. The idea of utilizing construction, particularly of public works, as a stabilizing factor in the business and employment situation has long been a counsel of perfection among students of these problems. In periods of great business activity the work of construction might be somewhat relaxed; and if in periods of business depression and slack employment these works might be expanded to provide occupation for workers otherwise idle, the result would be a stabilization and equalization which would moderate the alternations of employment and unemployment. This in turn would tend to favorable modification of the economic cycle. It is something to be greatly desired, but its accomplishment is attended by much difficulty. At a practical proposition, it is not easy to convince a man whose factory is idle or running on part time, that he ought to construct an addition to it because at some future time it will be needed, nor easy to recognize good times until they are passed. Also if Government withdraws from the market, others are likely to follow, nevertheless the first and easiest application of such a regulation is in connection with public works; the con-

Extracts of address of President Coolidge at sixth annual meeting of Associated General Contractors of America, Washington, Jan. 12.

struction program which involves public buildings, highways, public utilities, and the like. Most forms of Government construction could be handled in conformity to such a policy, once it was definitely established. Certainly in time of depression government can start building. This applies not only to the construction activities of the Federal Government, but to those of states, counties and cities.

Resultant Economies

More than this, the economies possible under such a plan are apparent. When everybody wants to do the same thing at the same time, it becomes unduly expensive. Every element of costs, in every direction, tends to expand. These conditions reverse themselves in times of slack employment and subnormal activity, with the result that important economies are possible.

I am convinced that if the Government units would generally adopt such a policy and if, having adopted it, they would give the fullest publicity to the resultant savings, the showing would have a compelling influence upon business generally. Quasi-public concerns, such as railroads and other public utilities, and the great corporations whose requirements can be quite accurately anticipated and charted, would be impressed that their interest could be served by a like procedure.

Present Tendencies

The tendency of the present times is undoubtedly toward conservatism in turning out articles intended for current consumption. The merchandising community is chary of laying in great stocks against a future market, because of the many uncertainties that still remain as a heritage from the war period. It is true that these uncertainties are far less acute in our country than in most others; but their existence in other parts of the world inevitably has a certain effect here. On the whole, then, our search for a factor of balance and stabilization brings us back to this business of construction which is represented here today.

It is found by those governmental agencies which maintain touch with these matters, that notable progress has been made in efforts to lessen the seasonal element in employment in the construction industries. They report that employment is better spread

through the year than ever before, and that in the last two or three years the proportion of winter-time employment has been considerably increased. This is entirely to the good, although much remains to be desired in this regard.

In Compliment to the Association

Organizations such as your own represent possibilities of much good usefulness in dealing with all these problems. To the extent that they are devoted to such useful ends, they are entitled to all encouragement. In the construction industries, the movements to develop uniform contract forms promise such an assurance of fair treatment to all competitors, and securing the best work. It is always recognized, of course, that such organizations may be the means to an undesirable limitation of competition, and to the unjustifiable increase of profits. If trade associations could be so conducted that the public might be assured of all their potential advantages, and at the same time safeguarded against the disadvantages incident to restricted competition and the exaction of too liberal profits they would render a large service to the community and would be assured of a corresponding measure of confidence and support. A very wise man, Adam Smith, writing some century and a half ago, made an observation which suggests how uniform are the processes of human nature through the generations. He said: "People of the same trades seldom meet together even for a merriment and diversion, but the conversation ends in a conspiracy against the public, or in some contrivance to raise prices."

We have had a good deal of evidence in our own time that this dictum of the wise old Scotchman is quite as applicable in one generation as in another. It is this trait of human nature which has in more recent years compelled society to adopt regulative measures to protect itself. I can assure you we can all agree that organizations of this kind will command the greater public confidence, and be the more capable of lasting usefulness, if they recognize the danger of falling into such practices. There is ample opportunity for good and useful results through organization, without overstepping the boundaries of public interest, honest competition, and fair dealing. To such a program every trade association may well be recommended. By punctilious observance of such aims and limitations, they will best serve themselves and win the commendation of the community.

LEGION OF HONOR, SAN FRANCISCO

G. A. Applegarth, Architect; H. McLean Co., General Contractors

The gift of Mr. and Mrs. A. H. Spreckels to the people of the City and County of San Francisco. Erected in Lincoln Park during the year 1924, San Francisco's greatest building year. The structure is of Class A construction and was completed at a cost of \$500,000.

Industrial Ventilation

By Leonard Greenburg, U. S. Public
Health Service and Yale Medical
School

Ventilation is a problem in the ordinary workroom or assembly hall chiefly and practically entirely during the colder months of the year when windows are as a rule kept shut and artificial heat is used. In 1922, Professor Winslow and the writer presented data based on the actual examination of conditions prevailing during the winter months in a very large number of workrooms which indicated that 68 per cent of the workrooms studied were at the time of examination at a temperature of more than 70 degrees and 15 per cent of the workrooms were 75 degrees and over. That such conditions as these cause a monetary loss there is little doubt and recent industrial studies by the United States public Health Service appears to indicate that, due partly to such conditions, also must be ascribed the terrifically high sickness rates from cold among industrial workers.

The remedy for this lies in the simple provision of one or more thermometers in the workroom, depending upon the size of the room, and in the intelligent supervision of the windows and heating unit in the workroom.

Ventilation systems for the purpose of cooling rooms should make provision for the handling of very large volumes of air with the inlets preferably near the floor level and the outlets near the ceiling. It may be wise in addition to provide in the neighbor-

hood an inlet of cool air, but not directly bathing the worker. The velocity employed in such cases as this may and preferably should be fairly high. Again it may be well to reiterate that the air stream should not directly strike the worker.

Dusts are present in the atmosphere to a greater or lesser extent at all times, even outdoors after a rainstorm

An abstract of a paper read at the Baltimore Safety Conference held under the joint auspices of the Baltimore Safety Council and the American Society of Safety Engineers-Engineering Section of the National Safety Council at the Emerson Hotel, Baltimore, Maryland, January 23, 1925.

and on the heights of mountains. The atmosphere of practically all workrooms contains an amount of dust greater than that found in homes, and in the atmosphere of these workshops where special dust producing devices are in use, such for instance as crushers, grinders and polishers and sand blast machines, the amount of dust in the air of the workroom may be enormous.

There are three ventilation methods in use for the protection of the worker against industrial dusts, namely the use of hoods of various kinds provided with exhaust pipings and suction exhausts, the use of helmets equipped with air lines for the purpose of supplying the worker with fresh air and lastly the use of enclosures provided with exhaust ventilation by means of which the hazardous dust may be removed.

The removal of fumes or vapors from the atmosphere of the workroom presents practically the same problem as the removal of dust with the possible addition of the heat factor which may be present in the case of vapors, such, for instance, as benzol. Benzol is used in industry chiefly as a solvent and after this purpose is served and the benzol is no longer needed it is allowed to evaporate in the workroom atmosphere. The result of such a practice is that the air may contain considerable quantities of this vapor. The National Safety Council study revealed concentrations from 53 to 4140 parts of benzol per million parts of air. The efficacy of any system for the removal of benzol should be tested by determinations of benzol with and without the protective device in use, such a method would probably yield very interesting and important results.

CHRONICLE BUILDING, SAN FRANCISCO

The tower of the Chronicle Building is the feature of the architectural design. The Gothic is appropriate to the romance associated in the public mind with newspaper work. The new building is distinctly a factory, but its architects, Chas. Peter Weeks and William P. Day, have given it strength, grace and beauty.

Alameda County Builders' Exchange Completes New Home

With a membership of 500, and growing steadily day by day, with the new \$350,000 home of the Builders' Exchange at Hobart and Webster streets ready for occupancy, this organization of men and firms identified with the building industry of the Eastbay enters upon an epochal period in its history.

The progressive spirit of the Builders' Exchange of Alameda County in purchasing a site and building a home of its own is commended in numerous letters we have received from other exchanges asking "how we do it and what our plan was upon which we accomplished so much."

It is reflected in our increased membership and in the enthusiasm of our members.

The new Builders' Exchange is a four-story brick and steel building, modern in every respect, comprising 78 offices, 12 of which are on the mezzanine floor, 12 stores on Hobart and Webster streets and a large assembly hall, telephone booths and other features.

The architect was Howard Schroeder. The building was erected under the su-

By E. W. SHAW,
Secretary Alameda County
Builders' Exchange.

pervision of Jos. F. Maganini, superintendent of construction.

At present the four floors have not been divided into offices, but this will be done during the year if the present demand for office space continues.

The completion of the new home marks the climax to a movement started in 1923, when the idea of a building of our own started in the exchange.

A locations committee considered carefully numerous sites suggested and finally aided by President E. M. Tilden, whose work in behalf of the exchange has made it possible to own our own building, selected the site at Hobart and Webster streets.

In one evening the members of the exchange raised \$50,000 for the purchase of the site.

The deal was immediately consummated.

Then came the organization of the Builders' Exchange Holding Corporation with E. M. Tilden, president; Geo. G. Jamieson, vice-president; L. C. Fraser, secretary-treasurer; T. D. Sexton and W. G. Thornally, directors. This corporation is independent of the Builders' Exchange.

Through the Central National Bank of Oakland money to meet the construction costs was raised and during the middle of last year ground was broken and the building started.

In this building will be located the offices of the exchange, the office of The East Bay Builder, official organ of the exchange, headquarters of material dealers, builders' representatives, building contractors and building craft organizations.

There never was a time in the history of the Builders' Exchange when a more harmonious spirit was manifested.

Under the able leadership of E. M. Tilden, the exchange looks forward to the biggest year in its history.

Marble Buildings Actually Grow, Survey Reveals

Marble buildings of the United States are growing.

This remarkable fact has been disclosed by a survey of thermal expansion of stone conducted by the United States Bureau of Standards.

"Marble, especially, shows peculiarities in its behavior under temperature changes," the announcement said.

"It expands on heating, but when cooled to the original temperature it does not shrink to its original dimensions; that is, it retains a part of the expansion as a permanent growth.

"Specimens have been measured under low temperature and found to expand when cooled below normal, which also, is contrary to the usual conception."

These queer characteristics of the action of stone, even under changes

of heat caused by Summer and Winter, are held accountable for the peculiar instances of warping which are sometimes found in marble headstones in cemeteries.

Bureau officials pointed out that thermal expansion of stone—that is the amount stone changes in dimensions with changes in temperature—has received too little attention from scientists and construction engineers of the United States.

The assumption has been, it was said, that stone expands at a uniform rate in all intermediate temperatures, these deductions being based on a limited number of observations. The present data was termed misleading.

Determinations at the Bureau of Standards, at which frequent length measurements were made on limestone

and marble specimens as the temperatures were raised indicated that these old assumptions are far from correct.

"For small increases in temperature above normal the expansion is very small, but the rate increases rapidly as the temperature rises," officials declared.

"At 100 degrees centigrade the average expansion of marble is about the same as that of steel, but at 200 degrees the rate is approximately doubled, while for temperatures a few degrees above normal expansion is only a fractional part of that of steel.

"These peculiarities are of particular interest and importance where stone is used in connection with other materials, as is usually the case in modern building construction."

Seek to Limit Production of Prison-Made Brick

The movement to have commodities manufactured in state prisons restricted primarily to state needs and keep them out of competition with the products of private industry was discussed by E. W. McCullough, manager of the Chamber's Department of Manufacture before the annual meeting of the National Brick Manufacturers Association held recently in Washington. Discussing a phase of prison labor employment of immediate interest to brick manufacturers, Mr. McCullough cited figures showing to what extent the manufacture of brick is carried on in state prisons and reformatories. He said:

"Bricks were manufactured in state prisons and reformatories of thirteen states during 1923. In only ten states, however, was the production under a system which permits the product to be disposed of on the open market in competition with similar brick made by free labor. These were Illinois, Indiana, Michigan, Mississippi, Missouri, New Mexico, North Dakota, Oklahoma, Oregon and Washington.

"The volume approximated 45,500,000

brick, with a total value of \$537,000. Of this amount over one-half were disposed of on the open or competitive market. Comparing this production with the government figures for 1923 on all common and paving brick made in the United States, we find it amounts to only one-half of one per cent. Under such circumstances, it can hardly be said that the competitive production of brick in state prisons constitutes a national menace to the brick industry. It does, nevertheless, fit into the consideration of the general prison labor problem.

"In this line the really destructive competition is local. Although ten states are cited, as a matter of fact 71 per cent of the production is concentrated in two states. The Michigan State Prison at Jackson produced 14,395,000 brick, while the Oklahoma State penitentiary at McAlester made 5,197,000. According to 1923 census figures this represents about five per cent of all common and paving brick made in Michigan and about six per cent of all brick made in Oklahoma. These percentages are comparatively

small, and if the prices on both the free and the prison product were approximately the same, it is quite probable the latter might be absorbed without having any noticeable effect on the local markets.

"As to prices, the brick line is not unlike any other affected by prison competition. The low prices quoted form the basis of complaint. Bricks from the Jackson prison are shipped into Detroit, a distance of more than seventy miles, and sold at prices below the actual cost of production to those employing free labor. Shipments from the McAlester prison extend beyond one hundred miles. The prices on the Oklahoma brick are said to be exceptionally low."

Mr. McCullough explained that he has been instructed by the Chamber's Board of Directors to make a further study of the whole problem of prison labor employment in contact with those engaged in prison management and those interested in prison welfare as well as with industries which may not be seriously injured by prison competition at the present time.

"Building Boom" is Over—Shortage Met Says Financier

Has the building shortage existing since the war been met by the great amount of new building carried forward in increasing volume each year and culminating in a total of more than \$5,000,000,000 in new structures erected in 1924? This is the question that all those interested in the building industry are asking today.

G. L. Miller, president of G. L. Miller & Co., Inc., whose house has financed hundreds of new building projects by first mortgage real estate bonds, who has made a survey of this subject recently, says:

"Every so often we see published tabulation of figures with reference to the extent of the building shortage in the United States, together with forecasts regarding the probable future extent of these shortages. Recently upon two successive days there appeared in two of the leading New York dailies, articles apparently based upon extensive study of building records, but directly at variance with each other."

In the first, it was estimated that the national shortage of building on January 1, 1920 was \$6,806,135,000. According to the method of computation used, this shortage was decreased from year to year, showing an estimated shortage on January 1, 1925 of only \$750,000,000.

The second tabulation showed a cumulative shortage of housing space of 271,000,000 square feet in 1923, and the figures indicated that this shortage was increased every year until 1924 when the total shortage was 1,420,000,000 square feet.

In explanation of these latter figures, it was pointed out that it is incorrect to estimate building shortage or surplus in terms of dollars, since building costs per square foot vary from year to year, and it is actual physical supply and demand which must be considered.

"With this contention most of us will agree," continued Mr. Miller. "But can we agree with the following statement, which I quote from the article referred to:

"In the last three years the country has been spending for new buildings an amount never approached before. But the building shortage instead of being relieved, is indicated by these figures to be growing steadily worse."

"We cannot trust arithmetic alone. The first survey referred to shows no shortage to speak of; the second indicates a worse crisis than ever before. Can we ascertain the true facts of the situation? I do not believe it possible. Nor is it of practical importance that we do so," said Mr. Miller.

During the past three years there has been expended for new building in the United States somewhere between \$11,000,000,000 and \$16,000,000,000 and the year 1924 has seen a larger amount expended for building than any previous year, a sum in excess of \$5,000,000,000.

The important question which now interests builders and those businesses dependent upon the building industry is: "Has the shortage which has admittedly existed since the war, ceased to effect building or when will its impulse dwindle off?"

"Of course, when there is an acute situation with reference to housing conditions, such as existed during the few months prior and immediately following the armistice," said Mr. Miller "the whole world knows that there is a building and housing shortage. When whole families are being taken care of in armories and public parks,

it takes no theorizing to know that a shortage exists."

"However, in times like the present it is more difficult to tell whether there is an actual shortage and to estimate exactly its extent, for the reason that so many other factors enter into the problem.

"Rental levels and construction costs, ease of securing money, general prosperity and high wages,—all these enter into the problem of how many additional buildings can be filled at any given time.

"The factors of supply and demand are always active. There is always demand for better accommodations when they can be secured at the same figure as has been paid for those of inferior quality, and wherever a new building is opened in a locality, it usually results in an exodus from older structures.

"When rental levels are lowered, there is a gradual but constant expansion caused by people moving from small apartments to those with more rooms and thus a more or less constant balance is at all times effected by the operations of the law of supply and demand.

"I see no possibility of any marked reduction in material or labor costs for some time to come," continued Mr. Miller, "neither do I look for any reduction of rentals in the case of well situated buildings properly constructed, according to modern standards.

"In fact, the entire question of shortage concerns us not nearly so much as the actual conditions in a particular locality, and the results which may reasonably be expected from an individual building. In other words, each project must be taken up and considered by itself and the probable future course as to rentals and occupancy must be charted with the greatest possible degree of accuracy.

"We have one case in mind where a building financed by us and nearing completion is about 80% rented, whereas another larger and more pretentious building within a few blocks has been finished for several weeks, and is now standing almost totally vacant.

"This does not indicate a question either of shortage or of over-supply of office space. It merely means that under actual present conditions, the factors of location, plan of the building and scale of rentals worked out in one case as though there were a shortage and, in the other, as though there were an over-supply.

"So it goes throughout the entire building field. It is much more the problem of care and good judgment than of either shortage or surplus," said Mr. Miller.

"One of the best indications as to potential construction demand is contained in the statistics gathered by F. W. Dodge Corporation, covering thirty-six eastern states, as follows:

Contemplated Contracts			
Year	Work	Awarded	Ratio
1918	\$4,046,100,000	\$1,944,300,000	2.08
1919	5,013,900,000	2,969,300,000	1.69
1920	6,655,200,000	2,951,700,000	1.92
1921	5,459,100,000	2,710,800,000	2.01
1922	6,796,400,000	3,848,700,000	1.77
1923	7,459,900,000	3,990,500,000	1.87
1924	6,652,200,000	4,481,800,000	1.48

The term "contemplated work" means plans prepared and reported by architects; "contracts awarded" means, of course, the actual contracts for work started during the current year. The important figure to consider in the above table is the ratio shown in the last column. It is obvious that a builder will not go to the expense of en-

gaging an architect and preparing plans unless he feels a distinct pressure of demand for additional housing in his locality. Therefore, it is found that during the period when shortage conditions are known to be worst, there is the widest spread between the value of construction planned and the amount actually going forward.

By a study of construction figures for a long period of years, F. W. Dodge Corporation estimates that the normal condition is represented by a ratio of three to two, that is to say, three buildings planned where every two are actually constructed. This ratio is expressed by the decimal figure 1.50. In times of extreme shortage, the ratio is found to go as high as four to two as shown for the years 1918 and 1921 in the above table. The ratio for the year 1924 is a trifle below 1.50, indicating that a normal balance is now being obtained.

However, this ratio is based upon record-breaking actual construction. Therefore, if during 1925 a normal of two thirds of the planned work is actually started we should have a building total ranking well up with the figures for the past three years.

"Closer than this to a dependable estimate, I do not believe we can come," concluded Mr. Miller, "and it appears extremely venturesome to me to attempt to predict further in the future. The 'boom' is undoubtedly over. We once more face stabilized conditions. Speculation will find little to thrive on. Good judgment, caution and careful moving must now be the watchword in the building field."

REGIONAL PLANNING CONGRESS TO MEET IN APRIL

The International Congress on Town, City and Regional Planning will be held in New York City, April 20 to 25, at the invitation of Governor Smith, and of the American City Planning Institute, the National Conference on City Planning and several other associated organizations.

An exhibit of city planning material from all over the world probably the largest and most comprehensive ever assembled, will be shown at the Hotel Pennsylvania and also at the Grand Central Palace, the latter as part of the exhibit of architectural and allied arts, under the auspices of the American Institute of Architects and the Architectural League of New York which will meet in conjunction with the city planning congress.

The congress will bring together the most prominent city planners in the world. The International Federation of Town & Country Planning & Garden Cities, which meets for the first time in this country, will be represented by some of the most eminent city planners and housing authorities in Europe.

The Conference will be of special interest and value to this country, as it will give opportunity to secure firsthand information upon an important field of city and regional development, namely, the better distribution of population and its effect on problems of transportation and traffic.

"City planning in European countries has been approached chiefly from the angle of planning for housing, and for the better use of land, rather than the mere platting of streets and laying out of land. The housing shortage in this country and the increased cost of building have emphasized the need of giving more attention to the actual distribution and character of building.

Higher Building Material Costs—Less Building Activity Expected

Prospective builders who have been endeavoring to obtain a perspective on general price conditions before venturing into their work may have no hesitation in going ahead this year, according to a survey of building costs just completed by Benjamin H. Cram, economist and statistician. Cram looks for higher building material prices in the spring, strong prices during the next several months and no worthwhile declines until in 1926.

"A study of conditions over the United States discloses that in 1925 there will be in all probability a greater number of projects in the building line put forward than last year, but this program will be carried on this year in sections which have not had opportunity to take care of the deficiency in building occasioned by the lull during the great war," declare Mr. Cram.

See Less Activity

"Industrial building will be less active this year, but that for public use and municipal and State work, including large road programs, will have a tendency to steady prices, if not cause firmness in some lines.

"Easing their outlook on past years with rising prices on building material during the early Spring months with the peak reached generally in the middle of the year has caused some prospective builders to defer actual contract making.

"On the other hand, dealers in

building supplies have seen the error of this condition and are endeavoring to rectify it. They have seen many huge projects, the total estimated at several hundreds of million dollars, taken off the market in the past three years at a time when price conditions made it unbearable for the builder to continue with his plans.

Road Building Influence

"Road building is expected to continue its influence over cement and much of the heavier material. This is due to the vast road programs of many of the States which still are uncompleted in the general scheme of linking up principal highways.

"While less building of magnitude is expected to be seen in residential, apartment house and public construction in northern communities, this deficit will be eradicated by the intensive building programs in the South, Southwest and Mississippi Valley sections.

"The big program of the South is the result of several years of high cotton prices. Southern cities, under the influx of northern insurance money as well as other investment agencies, have undergone a decided change, the old Civil War styles of architecture giving way to newer designs.

Southwestern Activity

"In the agricultural sections of the Southwest and West greater activity may be witnessed this year. Higher prices for grain received by growers

when the crops were moving will enable many farmers to bring about repairs to farm buildings and erect new structures long badly needed. This will have its effect on lumber sales.

"At the behest of country bankers, who have financed the farm communities in the past five years, less luxury buying will result, with the farmers devoting surplus funds to building up their farm assets.

"The road programs of the many central and western states will tax the railroad in the next few weeks. It comes at a time, however, when the carriers will be enabled to handle this extra movement of freight more expeditiously than in previous years through additional rolling stock.

"Our survey shows that builders will save but little in putting off their plans for this year.

No Declines Seen

"Prices on the basic materials in the building line will not go lower this year because a general consuming strike takes place, which is not probable.

"The market for cement is at about the lowest possible point now, with the tendency toward a firmer market in the next sixty days. Demand has begun already, both from road concerns as well as construction men engaged on large buildings.

"Common brick is showing a shortage at the plants. There has been a steady movement into second hands during the late winter months in preparation for an active spring building program. The tendency of brick prices is higher.

"With building hardware, especially among non-ferrous grades, the general market cannot be viewed with any degree of optimism for the purchaser. With ferrous grades the advance will not be rapid. In both grades foreign competition with domestic makers may act to steady the market in favor of the user.

Stone to Stay Up

"In the use of stone, stone products and high-grade marble and granite no price recession may be looked for. Quarry supplies above ground are believed inadequate.

"Steel shapes are showing a firm tone, along with other steel products. A good deal of tonnage for large buildings is either contracted or under option around second quarter steel prices. It is believed the prices will not be lower.

"Glass makers have worked steadily throughout the winter months, with supplies at market fairly liberal and no great price advance may be looked for.

"With lime, gravel and sand, local labor and similar conditions will guide their influence on any building project. In the large centers supplies have been fairly well gathered during the late fall in preparation for an early building season this spring."

HAIR OPERATES FOG BELL

Strands of human hair operate the fog bells of one of the nation's most modern lighthouses. To the hair, which stretches between two supports, is attached a metal link. When the fog comes the moisture stretches the hair and the link drops until it makes an electrical contact that starts an electric motor and sets the fog bell to booming its warning to mariners. As the fog disappears the strand of hair tightens and the link lifts until the electrical contact is broken and the bell stops ringing.

HUNTINGTON APARTMENTS, SAN FRANCISCO
Weeks and Day, Architects. Cahill Bros., General Contractors.

One of the many apartment houses erected in San Francisco during the year 1924. Located at the southeast corner of California and Taylor Streets, this twelve-story and basement reinforced concrete structure commands a wonderful view of the city. The building was completed at a cost slightly in excess of one and one-half million dollars.

Highway Costs in California are Upward

The cost of the construction of highways in California has increased by leaps and bounds since 1912 and accounts to a large extent for the increased amount of money necessary for the completion of the California Highway system, according to the Engineering Department of the National Automobile Club.

The present highways in California may be divided into three classes: first, graded and graveled; second, asphalt macadam, and third, concrete. In 1912, according to figures prepared by the California State Highway Commission, at the request of the National Automobile Club, the average cost of a mile of graded road was \$7295. Last year, this average cost was three times as great, or \$22,058. In 1912, the asphalt macadam type of highway cost an average of \$7112 per mile, while in 1924 this rate increased about fifty per cent (50%) with an average of \$10,593.

The greatest advance has been the cost of concrete pavement which shows an average cost of \$8885 per mile in 1912 and \$36,714 per mile in 1924.

Traffic conditions on a portion of this uncompleted highway system of California would not warrant paving the roads, but on the assumption that half should be paved with asphalt macadam and the other half simply graded, the cost would be \$76,848,927.

Due to the increase in volume and weight of traffic, the need of funds for reconstruction, maintenance and repair of highways is constantly increasing. Roads as constructed under the early plans of the State Highway Commission of California, proved too narrow and too light. Under the present law, the only funds available for new roads for the next seven years total \$19,826,302.

Based on the average cost per mile, the cost of grading the 2814 miles of

state highway yet to be completed, would be \$62,071,212. To pave this mileage with asphalt macadam would cost \$91,626,654 and to pave these roads with concrete would cost \$165,385,408.

The argument has been proposed that the law be changed so as to make available for new construction, a portion of the funds which are now used for reconstruction and repair, but this amount needed for these purposes will increase from year to year rather than decrease.

The increase in the cost of construction per mile in 1924 over that of 1912 is as follows: Grading 206%; asphalt macadam, 48%; concrete, 315%.

A careful analysis of the highway situation in California make it apparent that funds must be provided in the immediate future for the carrying out of California's great highway building program.

WOMEN'S CLUB—SAN FRANCISCO

Willis Polk & Co., Architects.

Bloss and Fayville, Supervising Architects.
C. R. Colluppy, Manager of Construction.

A seven-story and basement reinforced concrete club building to be erected in the south side of Post Street west of Powell Street. Excavation work has been started on this structure which will cost in excess of \$500,000.

THE OBSERVER

WHAT HE HEARS AND SEES ON HIS ROUNDS

The State Senate has passed the Sacramento-San Joaquin drainage bill for flood control, giving approval to the plans of the California debris commission for the continued co-operation of the state and federal government in the execution of the project. The total cost of the reclamation project provided for in the Boggs bill is estimated to be \$51,000,000, of which the state will pay \$17,000,000 in the aggregate, with not more than \$2,000,000 to be appropriated in any single year, and the federal government and the affected property owners the remainder.

The San Mateo county supervisors have declared forfeited the franchise granted to Frank Elbridge Webb to construct a bridge over San Francisco Bay, from Coyote Point, San Mateo county, to Alameda county. The franchise expired March 5. Webb was first granted a franchise on February 5, 1923, and an extension was granted to March 5. Webb, however, proposes to build the structure, and declares his intention of appearing before the San Mateo county officials on April 30 and seek a new franchise.

It sounds wellnigh impossible, but is published in the London "Observer," a reputable British paper, that although handicapped by driving rain, a Scarborough bricklayer, John Wood, laid 879 bricks in one hour under supervision. Wood had undertaken to beat a reported feat at Doncaster of a bricklayer having laid 870 bricks in an hour. Wood's record was accomplished on Scarborough Spa.

The Central Council of Civic Clubs, of San Francisco, has taken up the question of a zone ordinance that will regulate the height of buildings. The legislative committee has been assigned the task of drafting an ordinance establishing "height" zones throughout the city, which, if approved by the council, may be submitted to the voters of the city at the next election.

The jury sitting in the \$22,000 damage suit of Irene Hauser against Frederick Wood, president of the Coast Rock and Gravel Company, growing out of an automobile collision on the Glenwood highway, in Santa Cruz county, in which the plaintiff was badly injured, brought in a verdict giving \$10,000 to the plaintiff.

State Forester Pratt announces that approximately 3,500,000 redwood seedlings of the species *sequoia sempervirens* have been planted in Mendocino and Humboldt counties in the last few months by private lumbering interests as part of a comprehensive reforestation program.

Frank U. Nofziger, who with his brother formerly owned seven lumber yards in Los Angeles and vicinity died recently in Fresno. He was manager of the Sunset Lumber Company of Fresno at the time of his death.

C. W. Jackson, president of Mitchell, Jackson & Co., contractors of San Mateo, will be a candidate for councilman of that city at the municipal election April 7.

Frank S. Robinson, former city engineer of Chico, won his suit against the city of Chico for \$938 he advanced in the preliminary work for the paving proceedings ordered by the former city trustees. A contract was awarded and not carried through. When the contract was cancelled the city trustees required a test case to determine whether costs advanced on behalf of the contractor by the city engineer and charges made for services ending in a nullity were legal charges against the city. Superior Judge H. D. Gregory ruled that they are and awarded Robinson a verdict.

G. G. Watson, formerly in charge of manufacturing for the Sun Maid Raisin Growers' Association, of Fresno, is now in charge of the development of a mountain of gypsum in the Imperial Valley, for the Pacific Portland Cement Company, which is building a new city on the edge of Imperial county desert to be known as Plaster City. Watson was previously employed by the cement company to assist in building the company's plant at Redwood City.

A six weeks campaign designed to inform residents of Eureka and Humboldt county relative to all phases of home building has been launched by the Eureka Chamber of Commerce. The primary purpose of the campaign is to inform citizens in the problems of home ownership, financing, general property considerations, house plans, and quality of construction building the house, buying the house, and maintenance costs and expenses of home ownership.

Preparations are being made for the erection of a steel plant at Manresa Beach, Santa Cruz county, near Aptos. Those behind the venture include Don Crist and E. F. Waldner of San Francisco and D. F. Batchelor, F. Kepple and E. Batchelor of Petaluma. Leases on the entire iron sands district have been closed by the company representing these men.

W. H. Kirkbride, engineer, maintenance of way and structures, for the Southern Pacific Company, has been elected a director of the American Railway Engineering Association. The association is composed of railway engineers for the discussion and working out of various engineering problems confronting the railroads.

The 1926 convention of the California Society of Boiler, Pressure Vessel and Elevator Inspectors, will be held in Fresno. The association has a membership of about 150 men who make inspections of boilers and elevators to insure safety for operation. The convention will be held in January.

Andrew Jensen, consulting engineer, of Fresno, and Frank S. Granger, retired contractor, will be candidates for the office of Commissioner of Public Works at the coming municipal election in Fresno. William Stranahan, the present public works commissioner, will be a candidate for re-election.

Warehouse of Rasmussen Plumbing Co., at Hayward, suffers \$10,000 fire loss, March 10.

TRADE NOTES

We are pleased to announce that the Holmes Lime & Cement Company, manufacturers of lime since 1854 and the original lime company of California, have just completed a modern ready mixed mortar plant adjoining their present warehouse at Division and De Haro Streets. A novel and distinct feature of the new plant is what is known as the "Batch Mix" method, differing from the usual method in that the lime putty, sand and fibre are mixed in small quantities and therefore are more evenly proportioned. The lime loses none of its effectiveness under this new method. Each batch is properly used before leaving the plant. The high standard of service plus the incomparable quality of Holmes products will be maintained, according to Wm. J. Feary, manager.

E. D. Bullard Co. has been appointed distributor for the Federal Electric Company's sirens and electric lanterns. The Federal Electric Co. manufactures various types of electric sirens, the smallest being operated by a 6 volt battery, for fire department automobiles, starting and stopping signals in factories, fire and burglar alarms for various industries. The Federal Electric Co. also manufactures the Federal electric lantern, running on a dry cell, with a large handle, which is used by a number of the large railroads in the country for switchmen's lanterns and by the industries for watchmen's lanterns. Stocks are carried by Bullard Co., both in the Los Angeles and San Francisco offices.

A magnesite deposit, a half-mile from Chinese Station, in Tuolumne county, being developed by the Monarch Mining Co., is opening up in a most promising manner. From a few inches in thickness, when first discovered, the body of ore has increased to a width of about five feet. It is believed it will prove even larger.

The Magnacrete Products Co., of San Francisco, has leased the plant of the Pacific Alloy and Steel Company at Bay Point, Contra Costa county, and will manufacture magnesite floor products, slabs and insulating building material. Walter McClenahan, general manager of the company, is directing the renovation of the plant.

J. A. Korell & Co., sheet metal works, formerly located at 273 Twelfth St., San Francisco, due to increased business, has moved to larger quarters at 1903 Natoma street, near Twelfth.

Jas. Mulcahy, income tax expert, has closed his offices in the Phelan Bldg., San Francisco, and will again join the sales force of the Remillard Brick Company.

Hill Morton, Inc., lumber wholesalers, has opened offices in the New Builders' Exchange Bldg., Oakland. H. S. Morton is president and general manager of the company.

D. E. Striplin and P. C. Rasmussen, plumbers of Fresno, operating under the trade name of Striplin & Rasmussen, have dissolved partnership.

H. B. Price has leased a site south of Marysville and will establish a plant for the manufacture of cement building blocks.

DICKEY MASTERTILE

backs the face brick walls in the new P. G. & E. Building

DICKEY MASTERTILE is being used, faced with brick, covered with stucco, or exposed, for the bearing and non-bearing walls of many important buildings throughout Central California, including schools, hospitals, barracks, factories, mills, office buildings, apartment houses and hotels.

WHY? BECAUSE (1) it saves one-third to one-half the labor; (2) it saves one-half the mortar; (3) although amply strong it is 54% lighter than solid masonry and 60% lighter than concrete, and, (4) it usually eliminates the need of furring or other waterproofing.

WHITCO The Easy Hardware

The direction sheet packed with each set gives all the information anyone needs for installing Whitco Hardware on a single sash, pairs of sash, multiple sash in wide openings without mullions, or on transoms.

WHITCO makes it easy and safe to clean the outside of a casement window from within the room.

First, the hardware is housed into the top and the bottom of the sash—

Next, it is screwed to the sash at both top and bottom—

Then, after it has been turned at right angles—

And the sash set into the opening—

The only thing left to do is to attach the hardware to the header and sill.

The little "movie" above illustrates these steps clearly.

Any carpenter—whether he is familiar with it or not—can make a perfect installation with WHITCO, easier, quicker and more economically than with any other kind of hardware.

Whitco Hardware takes the place of butts and adjusters for swinging and controlling casement sash and transoms. One size fits all sash and each set may be applied to sash swinging either to the right or left. It is entirely self-adjusting.

A set of Whitco, the equipment for one casement sash or transom, consists of two pieces—one for the top and one for the bottom of a sash, or one for each side of a transom. Both are identical except that one is the reverse of the other.

WHITCO is sold through the retail hardware trade only.

We offer you some very valuable data regarding the use of Hydrated Lime

IT has been demonstrated in much fine plastering that Sierra Hydrated Lime, manufactured under the air separation process, cannot "pop" to the injury of delicately tinted plaster, because Sierra Hydrated Lime will pass through a screen 200 mesh fine. It is

manufactured under chemical control, with a special mixing process that has been positively proven correct in every detail. Naturally this important hydrating process cannot be left to inexperienced men. Good plastering and resultant satisfaction, with enduring, surfaces are assured.

Specifications for all coats of interior plastering calling for hydrated lime exclusively may be had on application. Our representatives, and our experience and facilities are at your service.

SIERRA Hydrated Lime is More Plastic than Quick Lime for Mortar and Finishing Putty

Our representatives will be glad to prove this statement and demonstrate the scientific reasons why the architects who have specified Hydrated lime will never go back to slaked lime.

CONVENTION HALL, District Conference.

ROTARY CLUBS of California.

NEVADA AND Hawaiian Islands.

FRESNO, MARCH 19, 1925.

SANDY PRATT is here.

JUST AS noisy as ever.

HE IS a delegate.

FROM PRATTCO (Monterey County).

AND FRATROCK (near Folsom).

SO HE tells the Rotarians.

WHO WOULD prefer.

LISTENING TO the speeches.

INSTEAD OF Sandy's "talks."

ON SAND, rock and gravel.

YOU SEE the Fresno Bee.

EVERYWHERE ON the streets.

AND YOU think.

THAT YOU are in Sacramento.

BOTH "BEES" look alike.

BOTH FULL of neighborhood news.

NOW HERE in Fresno.

THE GIRLS are "raishin."

ALL THEIR skirts.

EIGHTEEN INCHES from the ground.

IT LOOKS like.

YOU ARE at the "Stock Show."

AT THE State Fair.

SO MANY beautiful "calves."

PASS YOU in procession.

AL FALFA of Dixon and Woodland.

WILL FEED the "calves."

AL NEEDS "chicken feed."

NOT (ALFALFA) hay.

MARYSVILLE ROTARIANS have "peaches."

FROM SUTTER County.

THEY WEAR short skirts.

MISS B. COTTON of Oroville.

IS WEARING a white dress.

ALSO EIGHTEEN inches from the sidewalk.

AUBURN ROTARY Club claims.

THAT THEY have "Auburn" peaches.

BETTER THAN "Red" (Bluff) ones.

GRID LEE (Gridley) is a baby.

HERE AND growing strong.

AND MARY (ville) claims honor.

BECAUSE SANDY Pratt's concern.

THE PRATT Building Material Co.

HAS IT'S Yuba River sand plant.

IN MARYSVILLE.

MARY WAS born.

IN THE "bed."

OF THE Yuba River.

COLUMA IS "on the river" also.

ANOTHER ROTARY baby.

MAURICE ALEEE, Superintendent.

OF SANDY'S American River sand plant.

IS THE Sacramento delegate.

"RED" IS here.

FROM REDDING.

RENO ROTARY Club object.

TO THE "divorcing."

OF THIS second district.

OF ROTARY International.

ALTHOUGH IT is the largest.

OF ALL the districts.

TO KAY of Lodi club.

FAVORS GRAPE juice.

AT ALL Rotary luncheons.

SANDY PRATT, President.

OF THE Pratt Building Material Co.

PRODUCER OF crushed rock.

WASHED GRAVEL and sand.

FAVORS SANDWICHES.

AND FISH (Rockcod).

"I THANK you."

This California scene taken on the Southern Pacific Company's special train to District Conference at Fresno shows the "delegates voting" on the 1925 meeting place. Prattrock (home of Sandy Pratt's \$250,000.00 crushed rock and washed gravel plant) is one mile from Folsom Prison. Prattco, Monterey County (home of Sandy's Pratto Amber Sand Plant) is two miles from Hotel Del Monte. Both cities are favorites, one has the "rocks" to entertain the delegates, the other has a (sand) bank.

Plans Complete.

MONOLITH

PLASTIC WATERPROOF PORTLAND CEMENT

THE widespread use of MONOLITH PLASTIC WATERPROOF PORTLAND CEMENT in the construction of bridges, dams, reservoirs, swimming pools, basements, tanks, etc.—has proved its unusual strength and its ability to withstand the inroads of water and other destructive elements. It is equally well adapted for exterior stucco of homes and other buildings.

Because MONOLITH itself is waterproof, it requires no special precautions in transporting and storing it in damp weather.

Official Proposals

NOTICE TO CONTRACTORS

(San Jose, Calif.)

Notice is hereby given that sealed bids will be received and opened by the Board of Education of the City of San Jose, Santa Clara County, State of California, in the office of the Board of Education, High School Building, San Jose, California, up to 7:30 P. M. on the 14th day of April, 1925, for the following work in connection with the Theodore Roosevelt and Woodrow Wilson Junior High School buildings, according to plans and specifications prepared for the same by W. H. Weeks, Architects, 369 Pine street, San Francisco, or at the office of Binder & Curtis, Associated Architects, San Jose, Calif.

Labor of Painting.
Electric Time Clocks.
Special Fixtures.
Paint Materials.

All bids should be presented on bid forms furnished by the architects.

Each bid must be accompanied by a certified check on a responsible California bank in a sum not less than five per cent (5%) of the amount bid, made payable to the President of the Board of Education of the City of San Jose, for the purpose stated in the specifications.

Each bid must be delivered in a sealed envelope and addressed to W. L. Bachrodt, Secretary of the Board of Education, San Jose, California.

The Board reserves the right to reject any and all bids.

W. L. BACHRODT,
Secretary Board of Education, City of San Jose, California.
Dated March 12, 1925.

NOTICE TO CONTRACTORS

(Grimes Section, Austin-East National Forest Highway)

Sealed proposals for constructing the above-named National Forest Highway, located adjacent to the Toiyabe National Forest, Lander County, State of Nevada, will be received by the District Engineer, Bureau of Public Roads, U. S. Department of Agriculture, at 400 Bay Building, 9 Main St., San Francisco, California, until 10 o'clock A. M. on the 15th day of April, 1925, at which time and place they will be publicly opened and read.

A call for bids published in this section indicates that bids are desired from other than local bidders. Maximum competition is desired, and this is assured through BUILDING AND ENGINEERING NEWS which reaches every worth-while contractor and materialman in Central and Northern California who bids on public work.

Rate, 10 cents per line, per insertion.

All official calls for bids of the California State Highway Commission and Nevada State Highway Commission are published in this section.

The right is reserved to reject any and all bids and none will be considered except those from contractors ascertained, to be experienced and responsible.

The project begins 28 miles east of Austin and ends $1\frac{1}{2}$ miles west of the Eureka County line and is 5.75 miles in length. The principal items of work are approximately as follows:

Excavation, unclassified, 26,283 cu. yds.

Class "B" Concrete, 55 cu. yds.

Corrugated Metal Pipe, 168 lin. ft.

Crushed Gravel Surfacing, 7,628 cu. yds.

Construction shall be started within fifteen days after notice of award of contract has been given to the Contractor by the District Engineer, and shall be completed within one hundred (100) weather working days after said notice of award is given.

The contract form, maps, plans and specifications may be examined by responsible contractors at the following addresses:

District Engineer, 400 Bay Bldg., 9 Main St., San Francisco, Calif.

District Engineer, Bureau of Public Roads, Keisel Bldg., Ogden, Utah.

Nevada State Highway Department, Carson City, Nevada.

Forest Supervisor, Austin, Nevada.

The Bureau has available for loan to contractors on a rental basis, equip-

ment at Government Island, Oakland, Calif., as listed in the specifications. Bidder will state in his bid the Government equipment that he will use during construction and minimum time required. The estimated rentals will be taken into consideration and award will be made on the bid to the best advantage of the Government. Corrugated metal pipe will be furnished by the Government at Austin, Nevada.

Plans and specifications will be furnished to contractors who contemplate bidding, on a showing of financial ability and experience and upon deposit of a check for \$10.00 payable to the Secretary of Agriculture of the United States. Check will be held pending the return of plans and specifications.

All proposals must be made on forms furnished by the District Engineer, Bureau of Public Roads, and in accordance with the instructions forming a part of the specifications above referred to.

March 14, 1925.

C. H. SWEETSER, District Engineer.

NOTICE TO CONTRACTORS

(City of Tracy)

Bids will be received at the office of the City Clerk of the City of Tracy until 8 P. M. of the second day of April, 1925, for the following, to-wit:

Item No. 1. For the furnishing of 300 feet of 8 inch vitrified or concrete sewer pipe, Six (6) vitrified or concrete wyes with lugs, 1200 feet, 4 inch double-dipped threaded standard wrought-iron pipe, random lengths. One (1) Caulking Tee, One (1) Standard threaded Tee, One (1) Standard threaded Cross, Two (2) Standard threaded plugs, One (1) standard threaded Ell, One (1) Standard 4 inch wharf hydrant.

Item No. 2. Furnishing and installing the above sewer line to be constructed from the present manhole on South C Street extending southerly from the Center Line of First Street to the center line of South Street, a distance of 310 feet. The Water Line to be extended north along Bessie Avenue from the present 4 inch main, on Highland Avenue, under and across the West Side Irrigation District Canal, to the center of Eaton Avenue, running thence East to Wall Street. Don't select a ventilator which is merely a hole in the roof, as such a ventilator depends altogether on the temperature conditions for its action. In other words, when the temperature within the structure is equal or below that of the outside air, there is no flow of air up and out.

The true cost of a ventilator is the cubic feet of air handled during its whole life divided by the first cost. Keep this firmly in mind and select ventilators which are undeniably built to endure.

PACIFIC SYPHON VENTILATOR does the work of three others. Save this cost.

The correct syphon is the most powerful pulling force known to gravity science. It not only exhausts, it terrifically pulls.

The syphons harness the most delicate air currents, compressing and compelling them to co-act in mightily increasing the upward movement of air through the ventilator, and consequently increasing the pull.

The ventilator is in one piece and stationary—no mechanism, nothing revolving or rotating—always silently doing its work. Nothing to wear out. No cost or maintenance. A rotary ventilator requires a certain amount of wind energy to swing it around before it gets ready to ventilate. The PACIFIC SYPHON VENTILATOR uses this same wind energy to ventilate.

GREATER RESULTS WITH LESS COST

PACIFIC SYPHON VENTILATORS are far cheaper than other makes, since less than half the number or size are required to exhaust the same amount of air. Even then

the inferior types, with their larger number or greater size, will not give results equal to the PACIFIC SYPHON VENTILATOR when the outside air currents are low.

This saving in the number or size of ventilators involves an added saving in installation.

And so, while the initial cost of the PACIFIC SYPHON VENTILATOR may be higher than some others from a diameter standpoint, this is much more than offset by its surpassing exhaust.

NET PRICES PACIFIC SYPHON VENTILATOR (GALVANIZED)

NOTICE TO CONTRACTORS

(Alameda County)

Office of the Clerk of the Board of Supervisors, Alameda County, California.

Sealed bids will be received by the Clerk of the Board of Supervisors of Alameda County, at his office, until **Monday, April 6th, 1925, at 11 o'clock A. M.** (the day when said bids will be opened and the contract awarded) for the erection and completion of a

Pathological Laboratory, Garage and Power House for Highland Hospital of Alameda County, at Fourteenth Avenue, Vallecito Place and East Thirty-first Street, Oakland, California.

Complete plans and specifications for said work are on file in the office of the County Clerk in the Hall of Records Building, City of Oakland, California, where copies may be obtained by depositing with the County Clerk the sum of Fifty Dollars (\$50.00). Contractors will be restricted as to the length of time they may retain these plans and specifications to ten (10) days.

Contractors failing to return said plans and specifications within said time limit will forfeit their deposit to the County of Alameda. The entire amount of the deposit will be returned to contractors returning said plans and specifications in good condition within said time limit.

Each bid must be accompanied by a check for at least ten per cent of the amount of the bid, or proposal, certi-

fied to by some responsible bank and made payable to GEO. E. GROSS, Clerk of the Board, to be forfeited to the County of Alameda as agreed and liquidated damages should the party or parties to whom the contract shall be awarded fail to enter into the contract after the award or to give the bond required by the Board for the faithful performance of the contract.

The Board reserves the right to reject any and all bids.
(SEAL) GEO. E. GROSS,
Clerk of the Board of Supervisors of the County of Alameda.
Dated: March 9th, 1925.

BIDS WANTED FOR HIGHWAY IMPROVEMENT

NOTICE TO CONTRACTORS

(Churchill and Humboldt Counties—Nevada State)

Sealed proposals will be received by the undersigned on April 1, 1925, for constructing portion of the State Highway System in Churchill and Humboldt Counties as follows:

(1) Bids received until and opened at 1:30 P. M., for constructing a railroad undergrade structure of concrete in Winnemucca, Humboldt County.

(2) Bids received until and opened at 2:30 P. M., for grading, construction of culverts and placing a gravel surface between Westgate and Eastgate, in Churchill County.

Plans may be examined and form of proposal, contract and specifications secured in the office of the undersigned; may be examined also in the division offices at Elko, Reno and Las Vegas and the district office of the Bureau of Public Roads, Bay Building, San Francisco; also copy of underpass plans may be examined in the county clerk's offices at Winnemucca and copy of Churchill County proposed construction may be examined in the county clerk's office at Fallon. For each copy of plans undersigned requires a deposit of fifteen dollars (\$15.00), which will be refunded upon return of plans in good condition with-

in 30 days after opening of bids. Bids must be on proposal form of Highway Department and must be accompanied by a certified check in the amount of 5 per cent of bid.

Each bidder must accompany his bid with certificate from a surety company, duly authorized to do business in Nevada, stating that such surety company will provide said bidder with a bond in such sum as is required in and in accordance with the provisions of said specifications, conditioned for faithful performance of the contract and specifications.

Right is reserved to reject any or all bids.

GEO. W. BORDEN,
State Highway Engineer,
Carson City, Nevada.
(March 14-17-19-21-23-24-25) (tf)

NOTICE TO CONTRACTORS

Austin-West National Forest Highway

Sealed proposals for constructing the above-named National Forest Highway, located partly within the Tolovana National Forest, Lander County, State of Nevada, will be received by the District Engineer, Bureau of Public Roads, U. S. Department of Agriculture, at 400 Bay Building, 3 Main St., San Francisco, California, until 10 o'clock A. M. on the 15th day of April, 1925, at which time and place they will be publicly opened and read. The right is reserved to reject any and all bids and none will be considered except those from contractors ascertained to be experienced and responsible.

The project ends about a mile west of Austin, Nevada, and consists of two (2) miles of grading and structures and 19.46 miles of crushed gravel surfacing. The principal items of work are approximately as follows:

Excavation, unclassified, 10,183 cu. yds.
Class "A" Concrete, 31 cu. yds.
Class "B" Concrete, 9 cu. yds.
Reinforcing Steel, 2,618 lbs.

The estimated rentals will be taken into consideration and award will be made on the bid to the best advantage of the Government. Corrugated metal pipe will be furnished by the Government, at Austin, Nevada.

Plans and specifications will be furnished contractors who contemplate bidding, on a showing of financial ability and experience and upon deposit of a check for \$10.00 payable to the Secretary of Agriculture of the United States. Check will be held pending the return of plans and specifications.

All proposals must be made on forms furnished by the District Engineer, Bureau of Public Roads, and in accordance with the instructions forming a part of the specifications above referred to.

March 14, 1925.

C. H. SWEETSER, District Engineer.

NOTICE TO CONTRACTORS

(Yosemite National Park Roads)
DEPARTMENT OF INTERIOR NATIONAL PARK Service, Washington, D. C., March 6, 1925. Bids will be opened by George E. Goodwin, chief

civil engineer National Park Service, in the office of the superintendent, Yosemite National Park, at Yosemite, California, at 2 o'clock P. M., April 10, 1925, for the refinishing and paving of about 7 1/2 miles of the El Portal road and 13 miles of the Valley roads in Yosemite National Park. Contracts will be entered into for \$200,000 or less worth of work to be done under funds now available and \$300,000 or more worth of work to be done under Congressional authorization for obligations to be incurred and paid for under future Congressional appropriation. Instructions to bidders, proposal blank forms, specifications and drawings can be obtained from the office of the chief civil engineer, 811 Couch Building, Portland, Oregon, upon personal or written application and the deposit of \$5, which sum will be refunded upon return of all papers in good condition on or before the opening of the bids. Specifications and drawings can also be seen at the National Park Service, Washington, D. C., at the office of the superintendent, Yosemite National Park, Yosemite, California, at the Chamber of Commerce of San Francisco, Los Angeles, Fresno, Merced, Stockton and Sacramento, and at the office of the general contractors of San Francisco, California, and the Associated General Contractors of Los Angeles, California.

STEPHEN T. MATHER, Director.

STATE OF CALIFORNIA

CALIFORNIA HIGHWAY COMMISSION

SEALED PROPOSALS will be received at the office of the California Highway Commission, 515 Forum Building, Sacramento, Cal., until 2 o'clock P. M. on April 13, 1925, at which time they will be publicly opened and read, for construction, in accordance with the specifications therefore, to which special reference is made, of portions of State Highway, as follows:

Santa Barbara County, between Ortega Hill and Santa Barbara (V-S-B-2-J), about one and nine-tenths (1.9) miles in length, to be paved with Portland cement concrete and surfaced with asphalt concrete.

Los Angeles County, a reinforced concrete girder bridge, having a 40-foot roadway and two 6-foot sidewalks, across San Gabriel River, near Whittier (VII-L-A-2-D), consisting of eight 54-foot spans on concrete piers. Orange County, a bridge 180 feet long and 30 feet wide across San Juan Creek near San Juan Capistrano (VII-Or-2-A), consisting of three 46-foot and two 21-foot reinforced concrete spans on concrete piers and pile bents.

Plans may be seen, and forms of proposal, bonds, contract and specifications may be obtained at the said office and they may be seen at the offices of the Division Engineers at Los Angeles and San Francisco, and at the office of the Division Engineer of the division in which the work is situated. The Division Engineer's offices are located at Willits, Redding, Sacramento, San Francisco, San Luis Obispo, Fresno, Los Angeles, San Bernardino and Bishop.

A representative from the Division office will be available to accompany prospective bidders for an inspection of the work herein contemplated, and Contractors are urged to investigate the location, character and quantity of work to be done, with a representative of the Commission. It is requested that arrangements for joint field inspection be made as far in advance as possible. Detailed information concerning the proposed work may be obtained from the Division office.

No bid will be received unless it is made on a blank form furnished by the Commission. The special attention of prospective bidders is called to the "Notice to Contractors" annexed to the blank form of proposal, for full directions as to bidding, quantities of work to be done, etc.

The California Highway Commission reserves the right to reject any or all bids or to accept the bid deemed for the best interests of the State.

HARVEY M. TOY,
N. T. EDWARDS,
California Highway Commission.

The Portland Cement Stucco textures here shown are taken from photographs of actual stucco jobs. Any competent workman in the plastering trade can reproduce these beautiful, permanent and economical finishes.

A Texture for Each Period

Controlled and directed by the creative genius of the architect, Portland Cement Stucco assures a range of beauty obtainable with no other material. It makes certain a texture and tint that complete harmoniously the style of the period in which the structure is designed. Have you received your copies of "Portland Cement Stucco Textures" and "Portland Cement Stucco"? If not, send for them today. Address the nearest office listed below.

THE HUNTINGTON APARTMENTS, SAN FRANCISCO

PACIFIC TELEPHONE AND TELEGRAPH BLDG.
SAN FRANCISCO

TWO Prominent Fuller Glass Jobs

The Huntington Apartments crown one of San Francisco's most commanding sites, Nob Hill. The Pacific Telephone and Telegraph Company's new twenty-six story office building now nearing completion commands the sky line of the business section of the city. This building is to house the general offices of the company for the Pacific Coast. Both of these beautiful structures are monuments to the growth of the Pacific Coast. W. P. FULLER & CO. supplied the immense quantities of glass used in the construction of both the interior and exterior of these buildings.

McLAUGHLIN WARM AIR HEATING

Electrically Controlled Systems

—USING GAS AS FUEL—

Designed for California Homes

CONVENIENTLY CONTROLLED

ECONOMICALLY OPERATED

The Magnetic Valves control the burners, giving THREE TEMPERATURE REGULATION. These valves are operated by push-buttons, which are conveniently located within the home.

These valves never fail to operate. The electric coil raises and lowers the brass needle which is ground to fit the brass valve set.

A small red light on the switch indicates the position of the valve stem, insuring absolute control.

Detailed Information Furnished Upon Request

McLAUGHLIN METAL WORKS

223 J Street, Sacramento, Calif.

REPORT OF SMITH, EMERY & CO. Testing Engineers

The McLaughlin Furnace raised 28080 cu. ft. of air per hour from 63 F. to 133 F. with a gas consumption of 120 cu. ft. per hour.

This is sufficient to change the air in a five-room house three to four times per hour.

The CO2 and excess air in the flue gases are within reasonable limits and consistent with good operation.

DURABILITY OF CONSTRUCTION

The combustion chamber is made of No. 14 Armo-iron, welded into one continuous piece.

SAN FRANCISCO

Sacramento Builders' Free Exhibit

We would like you to know of some of the accomplishments of the Building Material Exhibit in the last three months.

We distributed 2000 invitations to visit the exhibit.

Organized a 1925 Home Building Club.

Arranged for a monthly meeting of the Architects & Engineers Club to be held in the Exhibit rooms.

Started getting data to establish a complete Building Material Information Bureau for Sacramento Valley.

We have added several more exhibitors and several more are planning to display here.

Took part in the meeting held January 26th and 27th of the States Producers of raw materials for building purposes.

Arranged a meeting of the Northern California Building Industries Annual Dinner held in the hall here at the Exhibit under the auspices of the Architects & Engineers Club. There were 150 present.

It goes without saying that the Exhibit is fast filling a place in the building industry that has long been needed.

"Westest"

Dead Front Safety
Panel Boards with
Cabinet

New style duplex, type
as illustrated, "Westest"
Dead Front Panels are
absolutely dead front, yet
they are easily accessible
for testing. Fittings are
G. E. standard and are
mounted on Johns-Man-
ville ebon y asbestos
in Special Crystalac
Finish. All "Westest" Panels are approved by
the National Board of Fire Underwriters.

NEW BUILDING MATERIAL WILL CUT CONSTRUCTION COSTS

Largely out of ashes and water a Swedish architect has invented a cheap porous building material that may slash construction costs, it is reported to the American Chemical Society from Horten, Norway.

Gasconcrete is the name of the new product, of which the report says:

"The raw materials are mainly cement, lime, and ashes from bituminous alum slate used for burning the lime. The ashes are ground very finely with lime and are then mixed with the necessary amount of cement and a substance forming gas when mixed with water.

"After being mixed with water the mass is cast into low walled molds, which are filled only half full. After some time the mortar begins to rise, and soon reaches the level of the molds

"It is allowed to harden somewhat, and is then cut by a machine into bricks of suitable shapes and sizes, which are finally hardened like the ordinary concrete bricks. It has a crushing strength of approximately 30 kilograms per square centimeter, and a very high insulative power against heat as well as sound, nearly like that of wood.

"The bricks are cheap in production, as the greater part of the raw materials—the ashes and the water—cost nothing.

FACTORY WAGES VERSUS BUILDING TRADE WAGES

"Are Factory Wages to Meet Building Trade Wages or Vice Versa?" is a question that has been bothering the construction industry for some little time, and now factory owners are beginning to wonder how much longer the vast difference in the earnings of their employes as compared to the men in building trades will continue.

Recent statistics show that the average weekly earnings of workmen in the factories of New York State amounted to \$31.37 in January. Allowing for a two-weeks vacation annually, the average factory worker in New York earns \$1558.50 per year. The worker in Illinois does not fare so well in that he earns on the same basis only \$1382 per year.

In the city of Cleveland, where the rate for common labor in the building industry is 87½ cents per hour, the average yearly income of a laborer is greater than that of the factory worker in New York or Illinois after allowing for the 20 per cent lost time which it is estimated that the common laborer has to meet.

When it comes to the skilled trades, the difference is of course much greater. The crying need today is for cheap homes for factory workers and others having small incomes. It is almost a physical impossibility for a worker whose annual income is around \$1500 to build a home during the construction of which the skilled mechanics were paid from \$1.25 to \$1.75 per hour.

There is bound to be a readjustment of this condition, and one of two things will eventually happen; either building wages will be reduced, or factory wages will be increased. As to when this condition will come about is an open question on which contractors might well devote some thought.

BILL SEEKS PROMULGATION OF COSTS ON PUBLIC WORK

A bill to amend an existing law has been introduced into the Minnesota state legislature which if passed may put teeth in the statute that provides for the publication of construction costs of all public works at their completion. The present law does not provide a penalty for failure to publish the costs. The amendment would make the official who neglected such publication guilty of misdemeanor.

While the proposed legislation aims to prevent the waste of state funds by officials who favor day labor construction, there are no provisions made for an accurate check on the cost figures given out by the department of public works. It is well known that cost figures can be juggled by interested parties to mean almost anything. Failure to charge off sufficient depreciation or rental charges of equipment can often make a day labor job appear cheaper than a contract job. Similarly, the padding of resale value of worn out equipment kept on hand can change the results. The bill may be a move in the right direction but it does not definitely provide that the public will receive all the facts about the costs of day labor construction.

FOREIGN CEMENT BAN IS SUBJECT OF PROTEST

A protest against the state highway commission adopting a policy as proposed by the Los Angeles Chamber of Commerce in a letter recently with regard to the more general use of California-made cement on Public highways, in preference to foreign cement, has been made to representatives of the road body by Lewis Switzer of San Francisco, representative of Belgian and other foreign cement interests.

Switzer conferred with both R. M. Morton and W. F. Mixon, chief engineer and secretary, respectively, of the highway commission. The point made by him is that the adoption of any policy aimed against the use of foreign cement is apt to bring about retaliatory measures in European countries now exporting large quantities of cement to the United States, to the detriment of California's commerce with the foreign countries affected in agricultural products.

Switzer, who is an agent of the American Finance and Commerce Company, predicted that the Sacramento Valley particularly is in danger of being hard hit if the highway commission carries out the suggestions of the Los Angeles Chamber of Commerce.

The chamber in its letter urged that not only cement, but all other materials used in the construction of roads should be of California manufacture as far as practical in the interest of the general industrial development of the state.

STEEL X-RAY BEING PERFECTED

It will be possible in the near future by the aid of the X-ray, to see through steel eight inches thick, Professor Pullin, director of the Radiological Research Department at Woolwich government arsenal, predicted in a recent address before the Royal Society in London.

It is an easy matter at present by the use of the X-ray to penetrate pieces of steel three inches in thickness, Professor Pullin asserted, but what is sought by scientists is an apparatus to enable them to examine into castings 10 or 12 inches through. This is desired so that flaws may be detected in castings, and to avoid serious danger to workmen's lives.

NEW HIGHWAY FINANCING BILL IS SUBMITTED

New principles governing the administration of highway financing, construction and planning are embodied in a bill for a constitutional amendment introduced in the Senate by Senators Roy Felton, San Francisco, and T. C. West, Alameda.

If the bill should be enacted and ratified by the people, the Legislature would be given control of all highway expenditures. The Highway Commission would be required to submit a budget within the first ten days of each biennial session showing all estimated expenditures for the next two years and also estimated highway revenues.

The Legislature would have the right to amend these figures or make any changes desired.

THE OBSERVER

WHAT HE HEARS AND SEES ON HIS ROUNDS

ALONG THE LINE

The Pennsylvania Department of Labor and Industry in co-operation with the United States Bureau of Labor Statistics has collected data on the union scale of wages and hours of labor in twenty-four cities of the State including Philadelphia and Pittsburgh, and finds that the rate for building mechanics on May 15, 1924, was 31 per cent higher than it was on May 15, 1919. Contrary to the general belief that building trade workers have secured higher percentages of increases than other trades, the report states that in the book and job printing industry the increase is 37 per cent and in the newspaper printing trades 36 per cent. Individual trade increases, when comparing 1919 figures with 1924 figures for the building trades, range from 15 per cent for structural iron workers to 47 per cent for mosaic and terrazzo workers. Other increases are: tile layers, 44 per cent; composition roofers, 42 per cent; glaziers, 41 per cent; lathers, plasterers, slate and tile roofers, each, 40 per cent; plasterers' laborers and cement finishers, each 39 per cent; bricklayers, 36 per cent, and elevator constructors, 35 per cent.

The magnesite deposits at Lind-say in Tulare county, have been sold to M. Farber of Los Angeles by Samuel Bagges and the S. F. Coolidge estate for a reputed price of \$20,000. It is said that the new owner will develop the properties vigorously and erect a reduction plant. The product is extensively used in the manufacture of flooring materials, stucco, imitation marble and similar articles of commerce.

The Shasta Iron & Steel Co. has placed the first of six 50-ton furnaces in commission at the Herault electric iron smelter and expects to have the plant operating at capacity in the near future. Manager J. L. Mayberry states that high-grade steel will be made direct from crude iron, and that the sole rights have been secured for the use of the Sod-burg process of making electrodes.

The twenty-third annual report of the United States Steel Corporation shows total earnings for the year 1924 of \$161,183,468, from which the net was \$104,221,975. After paying \$50,806,852 in dividends, of which \$25,219,677 were on the 7 per cent preferred and \$25,581,175 on the common stock, less various other charges, the surplus net income was \$24,266,340.

Building operations in Los Angeles for February, 1925, held up closely to the level which has prevailed for the last ten months. During this period, which includes the month just closed, the monthly totals have ranged from a minimum of \$8,789,332 to a maximum of \$13,090,467, the average being \$11,145,665.

Yolo County supervisors have adopted resolution urging State Legislature to appropriate \$225,000 to finance construction of causeway across Sutter-Dy-Pass, completing a west side road into Knights Landing and on to the bay.

The Peninsula Building Materials Company is preparing to start erection of a loading plant for sand and gravel at Redwood City.

At the recent annual convention of the Common Brick Manufacturers Association of America a plan was presented to assist prospective builders in the financing of brick homes. The plan calls for the making of arrangements with reputable financial institutions so that first mortgages covering up to 60 per cent of the value of brick residences may be issued. The owner will be required to furnish 25 per cent of the valuation, while the remaining 15 per cent is to be furnished on second mortgage by the financial house through the agency of the local brick manufacturers' organization. A committee of three will be appointed by the president to work out the details of the plan.

February production in the iron and steel industry was maintained at an increased rate over January after account is taken of the fewer working days, say official government advices. Shipments and unfilled orders data applied by principal locomotive manufacturers showed declines for February from both the previous month and a year ago. Car loadings were in greater volume than in either January, 1925, or February, 1924. Building construction contemplated by February awards declined from both the previous month and February, 1924. Business mortalities in February made a decline from the previous month but were larger than a year ago.

Marked improvement in the industrial situation of San Francisco and vicinity is reported by the United States Department of Labor. Almost every plant in the district is running at capacity, with an increasing demand for skilled labor, while a building program totaling many millions of dollars is under way in this city alone. Conditions in the lumber and farming sections of the state are also declared to have greatly improved during the last month. Not only is the output larger but the employment situation has cleared to the extent that hundreds of men are finding work.

The steamer West Niger arrived at Portland, Ore., March 11, with a cargo of porcelain from Nagoya. The vessel contained four carloads of the material for distribution over the United States. One carload will go to Chicago and several big consignments to Georgia, North Carolina, South Carolina and Alabama. The shipment is said to be the largest received at Portland from Nagoya.

During the last four years 79,643 residential buildings, including dwellings, flats, apartments and hotels, estimated to cost \$22,338,331, were erected in Los Angeles, according to the annual report of the city building department. Nineteen Twenty-three was the big year for this class of construction with a total of 25,861 buildings with an estimated cost of \$115,565,844.

The Schlage Lock Company will shortly start construction of a one-story brick and steel plant at Bay Shore and San Bruno avenues, San Francisco. The plant will cover an area of 100 by 210 feet, costing approximately \$50,000.

Albert K. Warren, who has been in charge of design and construction work in the Los Angeles county surveyor's office since 1914, has been appointed chief engineer of the Los Angeles county sanitation districts formed to construct a metropolitan sewage disposal system, at a salary of \$12,000 per year. Mr. Warren has been in charge of the preliminary sanitation work which was started in 1918. He will have full charge of the construction of the metropolitan sewer system which will embrace 150 miles of sewer. Bonds to the amount of \$9,120,000 have already been voted. Long Beach district will vote May 5 on a \$3,000,000 bond issue.

Application has been filed with the Alameda county supervisors by Allan C. Rush, Los Angeles attorney, for a permit to construct a bridge across San Francisco Bay. The bridge would be of steel construction, running from Mission street, San Francisco, via Goat Island to Oakland. It would be financed by private capital and would cost approximately \$38,000,000.

J. Webster Hoover of Everett, Wash., will become state highway engineer of Washington, April 1, supplanting Jas. Allen, who was appointed by Governor Lister in 1916, it is reported from Olympia. Mr. Hoover is a graduate of the University of Washington and was city engineer of Everett about seven years.

Southern Pacific Co. has applied to Interstate Commerce Commission to extend its Sutter Basin branch from Hindsdale into various reclamation districts in Central California. Extensions will be approximately ten miles in length and will cost \$500,000.

Bay Point Mill & Lumber Company of San Carlos has commenced operations. The company specializes in general millwork and lumber sales. O. D. Fairfield is president and general manager.

Saul Magnier, retired paint and oil manufacturer, formerly president of Manger Bros., Inc., died in Oakland, March 17, after an illness of several months.

L. Ferreiros and L. DePaoli have formed a partnership and will operate under the trade name of New Era Building Company with offices in San Francisco.

Reno, Nevada, reports a shortage of carpenters and skilled workmen are being sought from outside points. Residence and commercial building is reported most active.

Marshall K. White, former city engineer of San Mateo, has opened offices in the Loew-Zwierlein Bldg., 325 E. St., San Mateo.

Ralph McLeran & Co., capitalized at \$500,000, has been incorporated in San Francisco. Directors are: R. McLeran, R. A. Howkins and M. G. Harper.

ORGANIZATION NEWS

Organizations having a direct connection with the construction industry are invited to submit news for publication in this department.

BETTER CONDITIONS IN THE BUILDING TRADES

One of the most hopeful developments in the building trades is the increased stressing of labor efficiency, both by the workmen themselves and employers, says W. J. Moore, president of the American Bond and Mortgage Company. As proof, he points to several movements aiming to train and educate apprentices in their respective lines and to eliminate accidents. Further, he points to the fact that 1924, though a record year in building activity, witnessed surprisingly few disputes or strikes.

There is too much talk of the high wages paid to labor in the building trades, according to Moore, and too little thought given to the fact that wages must be considered in relation to the work given in return. Efficient, uninterrupted labor paid for at a high rate is in the end more economical and satisfactory than having operations retarded or held up altogether by discontented workmen.

SECRETARIES, ATTENTION!

Practically all organizations of the construction industry in California issue a monthly magazine or bulletin covering organization activities.

As a rule, such publications contain many news items that would prove of considerable interest to those in other sections throughout the country—and probably in your immediate vicinity—but due to lack of circulation, valuable items are not uncovered.

Building and Engineering News, with a desire to boost your organization through publication of your activities and yet advance the worth of its "Organization News" section, requests that you send such magazines or bulletins, when issued, that they might be reviewed and interesting news matter republished in this department.

This appeal is directed to secretaries who have overlooked us in the past. To those who have placed our name on the mail list, we extend our thanks.—EDITOR.

NO SKY-SCRAPERS FOR ENGLAND. ARCHITECT'S VIEW

In the opinion of Topham Forrest, architect to the London County Council, who recently returned to London from a visit to the United States, England will never adopt the skyscraper because it is being realized in America that New York is too high and that the tall buildings convert the streets into veritable canyons.

Mr. Forrest says that in plumbing and sanitation arrangements he found the United States far ahead of Great Britain, and that the educational buildings are far better equipped and finished than those in England.

In regard to hotels in the comparatively small city of Buffalo would, if dumped down in Piccadilly, put the best London hotels to shame. American hotels excel in the matter of service and in design, and the leading hotel architects of Great Britain are visiting the United States to study methods of hotel construction.

L. A. BUILDERS OPPOSE BILLS

Believing that the passage of Senate bills Nos. 164, 647 and 472 would work harm to the construction industry and cause loss of money to taxpayers, Los Angeles Builders Exchange has adopted resolutions opposing them and asking the co-operation of the construction industry in preventing their passage.

Bill No. 164 would exempt from attachment automobiles and equipment belonging to contractors.

Bill No. 472 would prevent the employment of any alien on public work except when other labor could not be obtained, and would place the burden of proof in case of controversy on the contractor.

Bill No. 674 would permit the erection of school buildings by day labor.

ELECTRIC MEN ORGANIZE

Tentative plans for the formation of the Sonoma County Development League, comprising electrical equipment dealers from every section of Sonoma county, have been arranged and at a dinner meeting to be held at the Occidental hotel in Santa Rosa, Saturday, April 2, officers will be elected. Leroy Crandall of the California Electrical Bureau, and Alfred Walker of the Pacific Gas & Electric Company, have been working on the organization whose purpose is to secure a higher standard of service through education of the public by a national educational campaign which is to be begun in the near future.

CLEVELAND PLASTERERS SIGN TWO YEAR AGREEMENT

A two-year agreement between the Plastering Contractors' Association of Cleveland and the plasterers local union was recently signed, effective March 1, 1925, and continuing until March 1, 1927. From March 1, 1925 to March 1, 1926, the scale calls for \$12.50 for an eight-hour day and five-and-a-half-day week. During the second year of the agreement the rate will be \$13 a day. The plasterers had asked for \$11 and a five-day week.

MECHANICAL ENGINEERS TO MEET AT PORTLAND IN JUNE

Portland will be the scene of a regional meeting of the American Society of Mechanical Engineers from June 22 to 25, 1925. This meeting has the backing and co-operation of all A. S. M. E. Sections on the Pacific Coast and it is expected that not less than five hundred engineers will attend.

The meeting will occupy four full days. There will be two technical sessions in that time at which papers will be presented on The Utilization of Wood Waste, The New 3-Inch Suction Diesel Dredge, The Mechanical Engineering Features of the Long Bell Lumber Company's New Saw Mill at Longview, Electric Logging, Steam Logging, Cable Systems in Recent Logging Developments, and the New Hydroelectric Plant of the Portland Electric Power Company.

BRICK LAYING CONTEST

In a bricklaying contest staged by the Minneapolis bricklaying school in which apprentices and young graduates competed, Elmer Schmitz, of La Crosse, Wisconsin, captured the apprenticeship championship from a field of 47 competitors. Schmitz laid 150 brick in an hour and 30 minutes. Brick were laid in 9 courses on a 13-inch wall 6 feet long. Similar contests are to be arranged as a monthly feature of the school.

WHY IT IS CALLED "HIGH-WAY"

Did you ever stop to think why they called it "highway"? The old Roman roads in England and on the continent were elevated above the surface of the ground as much as four feet to insure good drainage. The Appian Way in Rome was the first of these great Roman roads, and was the beginning of a system of 48,500 miles of road, built under state supervision and penetrating to all parts of the great Roman empire. The Appian Way was begun 311 B. C. It was built of blocks of lava, resting on lava foundation.

OAKLAND ARCHITECT SUES FOR BUILDING FEE

Suit for \$48,000 has been started in the superior court at Oakland by Wm. J. Wilkinson, who charges that this amount is due him from the Oakland Labor Temple Association in payment for plans and specifications of a proposed labor temple at Eleventh and Franklin streets. Edward T. Barker, the Bank of Italy, the Oakland Title Insurance & Guaranty Company, several bank officials, and "John Does" are co-defendants named as having an interest in the project.

Wilkinson sets forth that he was to get ten per cent of the cost of the new building, or three-fifths of the fee if the idea was abandoned. After preparing plans for a structure to cost \$450,000, he states, this plan was dropped after which he prepared plans for a \$350,000 building which was also abandoned.

"BLEEDING PILLARS" OF CHICAGO STATION EXPLAINED

Scientists have explained the phenomenon of the "bleeding pillars" at Chicago's new Union Station.

The pillar is of Travertine marble, imported from Italy. Observers declared blood was oozing from a little hole near the top. Here is the explanation given by J. D. Esposito, engineer and scientist:

"The stuff has been analyzed and found to be rotten vegetable matter with iron oxide. It was probably caught in a cavity about 7,000,000 years ago, when the marble was forming."

EXCHANGE MOVES

Headquarters of the Fresno Builders' Exchange have been moved from 2123 Kern street to 921 L street, Fresno. The exchange was compelled to seek larger quarters to accommodate a constantly increasing membership, according to E. W. Chroux, Secretary-manager of the organization.

TRADE NOTES

Construction of a new plant at Blythe, Calif., and new additions to the present mill of the United States Gypsum Company supplying California builders, are announced by C. A. English, Pacific Coast manager of the company. Both operations are to be started in the near future to be completed this summer.

"Opening up of the Blythe gypsum deposit, which we have held undeveloped for several years, means that the United States Gypsum Company appreciates the rapid industrial and real estate development of California and wishes to take advantage of the big demand for fireproof, insulating building materials which that growth offers," says English.

As a result of these two constructions, a new form of gypsum known as structolite concrete, with which fireproof insulated homes can be built entirely of gypsum, will be introduced in California, English announced. They also will mean that Sheetrock fireproof gypsum wallboard, which heretofore has been supplied to California builders from plants in Texas and Oklahoma, now will be manufactured in this state with a consequent economy to users because of lower freights, he stated.

Plans are again being formulated toward reopening the Stockton Glass Works at Stockton, which has been idle for the past four years. The Western Window Glass Company is now negotiating for the plans and expects to begin operating within a short time. Articles of incorporation by the new company have been filed, the board of directors being composed entirely of Stockton men as follows: Morris Davidson, president of the Davidson Scrap Iron Company; Everett H. Wolf, manager of the Stockton Paint Company; G. Lewis Fox, industrial engineer of the Stockton Chamber of Commerce; Steven Pierce and George Dare, formerly sales manager for the Murphy-Cantrell Company and former vice president of the Allied Motors Corporation. Morgan A. Sanborn, assistant district attorney is secretary-treasurer. The plant is owned by Morris Davidson, one of the directors and Dare has been familiar with the status of the plant for five years. He believes the failure of the old company was due to inefficient management.

Yosemite Portland Cement Company, incorporated under the laws of Delaware, have been filed in Fresno. The company will issue 151,500 shares of stock of which 150,000 will be Class A common with a par value of \$10 a share and 1500 will be Class B common with no par value. The directors named in the articles are Samuel C. Wood, Harry C. Hand and Raymond J. Gorman, all of New York.

J. J. Kolburn, general contractor and build-r, announces dissolution of the firm of R. Paratore and J. J. Kolburn, general contractors. Kolburn will continue in the contracting business, operating independently, with temporary office quarters at 1551 Filbert street, San Francisco. The dissolution was effective February 18.

Construction has been started on a 25,000 rock bunker plant in South American street, Stockton, for the Yoldan Ice & Fuel Company of that city.

Cleveland Building Trade Schools to Hold Commencement

For the first time in the history of the construction industry, a group of building trade apprentices will be given diplomas showing completion of certain prescribed work in the Cleveland Building Trade Schools on Friday, April 10, 1926.

Classes in plumbing, bricklaying and carpentry have been in operation in Cleveland for a number of years, and the 150 apprentices who will receive their diplomas at the first annual commencement represent these three groups. During the early part of January, apprenticeship courses in painting and electrical work were started. At the present time there are approximately 1000 apprentices in the five trades attending the part-time schools. This form of instruction has proved so attractive that there are hundreds of boys on the waiting list who will be admitted to the schools just as soon as places are available.

The apprentice classes operate under the Smith-Hughes Law, which is a Federal Act that provides for federal aid in the support of part-time trade schools. The balance of the money required to carry on the schools is furnished by the local Board of Education. The building materials used in the schools are supplied by the local material manufacturers and dealers. The Cleveland Builders Supply & Brick Company supplies the brick and other materials used by the brick-laying class. The lumber used by the apprentices in carpentry is furnished by the Cleveland Board of Lumber Dealers; the material used in the painters class is supplied by the Cleveland Paint Oil and Varnish Club. The various plumbing supply houses donate the material for the plumbing school, while the electrical supply jobbers furnish the supplies for the electrical apprentices.

Each apprenticeship class is under the direct supervision of a joint committee made up of contractors, union representatives and the local Board of Education. Every candidate for admission to a class is required to pass an examination in order to satisfy the committee of the trade he wishes to learn of his fitness, both physical and mental. After he has qualified he is indentured to a contractor in his chosen trade and is admitted to the part-time trade school. The apprentice then begins a four year training program in which the theoretical part of his trade is correlated with the practical in a way that when he completes his course he is a much better mechanic than he would have been had he learned his trade under the old apprenticeship system.

Each apprentice is required to spend four hours per week in school during his entire apprenticeship period, for which he is paid by his employer. In the event an employer finds it impossible to keep an apprentice steadily employed, the boy is transferred temporarily to another employer. In that way each apprentice is kept busy the year round. Too many apprenticeship schools fail because no provision is made to take care of boys during slack times, with the result that the apprentice loses interest in the trade and seeks employment in other industries where they are assured of a steadier income. The method under which the Cleveland apprentices are given steady employment is one of the strong features of the system and accounts in a

large measure for the success that has attended the Cleveland Plan since its inception.

Elaborate preparations to make the commencement an impressive one are under way. Geo. F. Hedrick, President of the Building Trades Department of the American Federation of Labor, is expected to deliver the principal address of the evening. The Federal Board for Vocational Education, which has co-operated so effectively with the Cleveland Board of Education in the promulgation of part-time apprentice schools, will be represented on the program by J. C. Wright, Director, Washington, D. C. The contractor's representative will be Walter Klie, President of the Associated Plumbing Contractors of Cleveland, who will also address the graduates. The Board of Education will be represented by R. G. Jones, Superintendent of Schools. Mayor Clayton C. Townes of Cleveland will preside at the commencement exercises, and the diplomas will be presented by E. M. Williams, President of the Cleveland Board of Education.

Officials of the Associated General Contractors of America, National Association of Building Trades Employers, American Construction Council, Mason Contractors Association of United States and Canada, and other organizations in the construction industry have been invited to attend the commencement exercises.

On account of the success which has followed the co-operative part-time plan for training apprentices, as put into operation in Cleveland, many other cities have since either started to train boys along the same line, or revised old systems to make them conform more closely to the Cleveland Plan.

Among the labor leaders who probably will attend are: Wm. R. Green, President of the American Federation of Labor, Washington, D. C.; Wm. L. Hutcheson, President of the United Brotherhood of Carpenters and Joiners of America, Indianapolis, Ind.; Wm. J. Brown, President of the Bricklayers, Masons & Plasterers' International Union, Indianapolis, Ind.; John Coefield, President, United Association of Plumbers and Steam Fitters, Chicago, Ill.; John J. Hynes, President of the Sheet Metal Workers International Association, Washington, D. C.; P. J. Morrin, Pres. International Association of Bridge, Structural and Ornamental Iron Workers, St. Louis, Mo.; Arthur M. Huddell, President, International Union of Steam and Operating Engineers, Chicago, Ill.; J. P. Noonan, President, International Brotherhood of Electrical Workers, Washington, D. C.; E. J. McGivern, President, Operative Plasterers and Cement Finishers International Union, Washington, D. C., and W. J. McSorley, President, International Union of Wood, Wire and Metal Lathers, Cleveland, Ohio.

Representatives of the Cleveland contractor associations and the local labor unions will attend the commencement exercises, as will delegates from the various civic and business organizations in the city.

The committee in charge of the arrangements is made up of W. P. Carroll, Executive Manager, Building Trades Employers' Association; H. L. Bricks, Director of Vocational Education, Board of Education, and H. L. Schwarzer, Secretary, Carpenters' District Council.

Publications

Better Homes in America, Incorporated, Washington, D. C., has published a revised edition of the handbook for home owners prepared by Dr. John M. Gries, head of the division of building and housing of the United States Department of Commerce, and James S. Taylor, his assistant. How to finance the building of a home, and the pitfalls for the inexperienced investor to guard against, are topics included in the new edition. Budgeting the income is suggested by the authors of the booklet as a practical means of saving funds to carry out the plan for the man whose income is limited, and tables have been prepared to show how a person with only \$1200 a year can plan and build a home.

"Historic Homes of America" is the title of a brochure recently issued by the Red Cedar Shingle Bureau, 455 Stuart Bldg., Seattle, Washington. Copies of the brochure are being distributed to architects throughout the United States and Canada. It includes a series of illustrations made from actual photographs of historic homes having shingle roofs. The brochure may be obtained from the Red Cedar Shingle bureau or the Condon-Milne-Gibson, Incorporated, 644-45 Central Bldg., Seattle, Washington.

Practical Steam, Hot Water Heating, and Ventilation, by Alfred G. King, has been revised and enlarged. The third edition gives rules and data for estimating radiation and cost, and describes systems of steam, hot water, vacuum, vapor, and vacuum vapor heating, including chapters on modern methods of ventilation and the fan or blower system of heating and ventilation. The book is published by the Norman W. Henley Publishing Company, Putnam Bldg., 2 West Forty-fifth street, New York City.

Associated Metal Lath Manufacturers, incorporated, 123 West Madison St., Chicago, has published bulletin Number 4 on Design Data for Metal Lath Construction. Information relative to this type of construction or any other application of expanded metal lath in construction work will be supplied on request by the engineering department of the Associated Metal Lath Manufacturers.

ARCHAEOLOGISTS' UNEARTH MODERN PLUMBING

Unearthing of several structures equipped with open plumbing has led Italian archaeologists who are excavating Leptis Magna, ancient imperial city of Northern Africa, to believe the decayed city was up-to-date in many respects as modern New York and London. Despite the fact their work has been impeded by clashes between natives and Italian rebels employed as laborers, the archaeologists report amazing progress and say Leptis Magna is emerging from the desert sands that have covered it for centuries, virtually intact.

Among the latest findings are 20 perfectly preserved statues and several Cipolin marble columns nearly 40 feet high. One enormous structure that has been unearthed covers about 50,000 square feet of space.

Discovery of a huge statue of Emperor Septimius Severus, who completed Leptis Magna after 18 years' work, is momentarily expected.

Local Contractors are Awarded Decision in Artificial Travertin Case

(Special Correspondence)

Although the Pennsylvania Railroad station was completed in 1913, the court has just ruled that work on that structure was not experimental.

This decision is rendered by the United States Circuit Court of Appeals for the Ninth District. It is of special interest to all architects and contractors, because the construction material involved is artificial travertin stone, now so widely used in large buildings all over the country.

The patent on the process for making this material is held invalid by the decision, and anyone is now at liberty to use it. The opinion is especially interesting to lawyers, because in this case, which was argued by T. Hart Anderson, of the firm of Munn, Anderson & Munn, the court reversed itself, the same Appeal Court having previously held in two cases involving the same plaintiff that the same patent was valid.

The entire case hinged on the question of whether or not the use of this material in the Pennsylvania station was an experiment or not. If its installation was not an experiment, but a regular business transaction, then the patent would be invalid because application for it was not made until more than two years after the work was finished.

The evidence showed that McKim, Meade & White were the architects who designed and supervised the construction of the Pennsylvania station and that the George A. Fuller Construction Company was the general contractor for the building. The company of Paul E. Deniville, the alleged inventor of the artificial travertin process, was retained as sub-contractor to install the imitation travertin, which is the material covering portions

of the interior of the station. The entire work was to be completed to the satisfaction of the architect.

The Deniville contract was executed March 5, 1909, and on November 29, 1910, the Deniville Company executed an acknowledgment that it had received from the contractor the sum of \$125,741.03 in full payment of all monies due or to become due in connection with the contract.

The wall surfacing of the buildings of the Panama-Pacific International Exposition in San Francisco was also of imitation travertin stone, installed under the personal supervision of Deniville, the patentee. The material has proved so attractive and durable that it has been used in buildings in all parts of the United States. The present suit was brought by Deniville, the patentee, against McGruer & Simpson, contractors, for their use of the imitation travertin stone in the construction of the palatial Biltmore Hotel in Los Angeles.

On October 20, 1915, Deniville applied for his patent, and the patent was issued to him on January 16, 1917. This patent is knocked out by the court's decision. Judge Morrow saying on behalf of his colleagues, Judges Hunt and Gilbert:

"We conclude that the patent is invalid for the reason that more than two years prior to plaintiff's application for the patent he had placed the process and product of the invention on sale and had sold both the process and the product to the Pennsylvania Tunnel and Terminal Railroad Company for a profit."

Paul E. Deniville, the plaintiff, was represented by Townsend & Loftus of San Francisco, and McGruer & Simpson, the defendants, by Munn, Anderson & Munn of New York.

General Lumber Standardization Conference Will be Held in May

May 1 has been set as the opening date of the general lumber standardization conference with Secretary Hoover in Washington. John W. Blodgett, Chairman of the Central Committee on Lumber Standards, announced at the close of a two day meeting of the Central Committee in Washington. It is believed that this meeting, which will be the third general conference held during the past three years, will see the program of the standardization of the softwood lumber industry brought to a successful conclusion, the result of which will be an estimated saving to the American people of many millions annually.

Secretary Hoover's initial move to bring about standardization in the lumber industry was made in May, 1922. Under the auspices of the National Lumber Manufacturers' Association, and at its invitation, the Secretary called the first meeting of representatives of the industry together to explain his plan of industrial standardization. Mr. Hoover believed that if the lumber industry, the largest single manufacturing industry in the United States, with \$12,000,000,000 capital, employing 800,-

000 persons and indirectly about 1,000,000, and with an annual product of more than \$2,000,000,000, could adopt national standards, other industries would follow lumber's example.

Chairman Blodgett, in behalf of the Central Committee on Lumber Standards, has submitted, from time to time, specific recommendations covering standard lumber classifications, yard lumber sizes, methods of lumber measurements, and provisions for protecting the consumer. After three years' intensive work, the industry has practically completed this tremendous program, which is recognized today as one of the most outstanding and progressive accomplishments in the American industrial world.

Present indications are that a large number will attend the coming May conference, which will include representatives of lumber manufacturers, wholesalers, retailers, architects, contractors, construction engineers, railroad and wood-using industries, as well as the various government departments which have co-operated in the movement.

ATLAS AND SANTA CRUZ PORTLAND CEMENT STOCK SPLITS

The following letter has been mailed to the stockholders of the Santa Cruz Portland Cement Company:

"On February 24, 1925, the board of directors of the Santa Cruz Portland Cement Company authorized a change in the shares of the capital stock of the corporation from 50,000 shares of the par value of \$100 each to 100,000 shares of the par value of \$50 each. The necessary assent of two-thirds of the stockholders has been procured and the appropriate corporate proceedings have now been completed so as to accomplish this change. Therefore, each share of stock of the par value of \$100 which you owned at the time of the change in capitalization has been changed into two shares of stock of the par value of \$50. It is necessary for you to surrender your present certificate at this office, 300 Crocker Bldg., at your earliest convenience so as to receive in exchange therefore a new certificate evidencing the stock of the new par value.

"The quarterly dividend, payable, April 1, 1925, will be \$1 per share on the new stock. Before you can receive the dividend it will be necessary for you to exchange the certificates of stock which you now hold for new stock."

Stockholders of the Atlas Portland Cement Company will vote May 6 in plan to split the common and preferred stocks on the basis of three new shares for each old share. The new common will be of no par value and the new preferred of \$33.33 1/3 par value in place of the present \$100 par value for both issues. It is also proposed to cancel 5000 preferred shares held in the treasury and heretofore unissued, and increase the common stock by authorizing 100,000 additional new shares. The capital structure after giving effect to the proposed changes will be as follows: 1,000,000 common shares and 75,000 preferred shares.

CEMENT STOCKS SHOW INCREASE IN IMPORTS

Production of finished Portland cement during February totaled 8,255,000 barrels against 8,588,000 in February, 1924, the Geological Survey reports. Shipments were 6,015,000 barrels against 5,333,000 in February, 1924. Stocks at the end of February aggregated 19,597,000 barrels against 16,315,000 barrels a year previous.

Imports of hydraulic cement in January totaled 229,837 barrels, valued at \$361,098. In 1924 they amounted to 2,010,936 barrels, valued at \$3,116,564. January imports were mainly from Belgium, 94,338 barrels; Norway, 89,367 barrels, and Denmark, 37,991 barrels. Exports of hydraulic cement in January were 71,556 barrels, valued at \$207,547, of which there was sent to Cuba 34,052 barrels, Port Rico 14,548 barrels, South America 13,557 barrels, Mexico 12,736 barrels and Central America 7746 barrels.

JUST A FEW CEMENT SACKS

To replace worn-out cement sacks, the textile mills of the country are called upon to manufacture a strip of cloth 17,000 miles long and 20 in. wide. This material is sufficient for 30,000,000 sacks. Substantially 30,000 bales of cotton are required to fill this order and it takes 1600 looms, working full time for a whole year, to weave the cloth. A total of 200,000,000 sacks are in use in the United States at the present time for the sole purpose of distributing Portland Cement.—Compressed Air Magazine.

Here, There and Everywhere

Special Correspondence

The most important question to be considered by the National Board for Jurisdictional Awards at its next meeting, which will be held in Washington D. C., the week beginning March 9th, will be the re-opening of the reinforcing rod case. It will be recalled that under a previous decision of the Board the placing of reinforcing rods in concrete construction was given to the iron workers. Many contractors contend that this work belongs to the common laborer and that in the interests of construction economy it should be given to the laborers who always receive a much lower rate than the iron workers. Representatives of a number of associations appeared before the Board at its last meeting in St. Louis with the request that the case be reopened.

Among the other disputes which will be heard by the Board are the following:

—Londoo base—Contestants, electrical workers and sheet metal workers.

—Cutting of chases of channels—Contestants, bricklayers and electrical workers.

—Metal trim for elevator enclosures—Contestants, sheet metal workers and structural iron workers.

Contractors who operate in more than one state should be interested in a movement backed by the National Industrial Conference Board to tighten the loopholes existing in the various workmen's compensation acts to make them more uniform, and to see that a physician is a member of the administrative board or attached to it in an advisory capacity. With the exception of Arkansas, Florida, Mississippi, Missouri, North and South Carolina, all the other states have laws covering workmen's compensation. Unfortunately no two of these laws are the same, with the result that a contractor doing work in a number of states is confronted with the necessity of acquainting himself with the specific law in each state where he is operating.

It is understood that officials of the state organization of painters in Massachusetts are contemplating making a demand for a ten minute rest period in every hour. Reduced to terms of time actually worked this would mean that painters would only work six hours and forty minutes a day or thirty-six hours and forty minutes a week where the five-and-a-half-day week prevails. In the City of Boston where painters now enjoy the forty-hour week it would mean that members of this craft would work only thirty-three hours and twenty minutes a week.

A recent survey made by the Architectural Forum shows that while the volume of new building this year will be large, it is doubtful if the figures for 1924 will be equaled. The report states that the volume of apartment buildings, large dwellings, hospitals and theatres built as was the case last year. The falling off in apartment houses is predicted at about 20 per cent, and hotels 25 per cent.

The state licensing of all general contractors in the business of home construction is being advocated by Harry A. Sisson, newly elected president of the United Builders of Detroit.

The International Association of Bridge, Structural and Ornamental Iron Workers through its president P. J. Morrin issued a strike order, effective February 9th, in an effort to tie up all the jobs on which members of the International Association of New York City have the structural iron workers contracts. The structural iron workers strike, which started last May, has never been settled and members of the Iron League are employing non-union men. The present strike order applies only to ornamental iron workers, derrickmen and riggers. Officials of both the Iron League and the Building Trades Employers Association declare that the strike failed to materialize. The Iron League recently agreed to a wage advance from \$19.50 a day to \$12.00 a day, effective March 1st, but refused to recognize the closed shop. It is pointed out that the three crafts involved in the strike order all have wage agreements with their employers which run until January, 1926, and that any sympathetic strike with the structural iron workers would be a violation of the contracts.

Marble setters and ornamental iron workers in Chicago were recently granted an increase of 12 1/2 cents per hour over their present rate of \$1.25, effective June 1, 1925. Structural iron workers are demanding that they be given an increase of 25 cents an hour which would bring them to the level of the bricklayers and plasterers, who are now getting \$1.50, but the employers have refused to give them any more than the increase granted to ornamental iron workers. There are three agreements expiring on May 31st which contractors believe can be renewed at the present rates. They are with the bricklayers, fire proofers and stone cutters. It is understood that the group of general contractors who now have agreements with the carpenters, hoisting engineers and laborers have agreed to a scale of \$1.37 1/2 for the carpenters and carpenters, and 87 1/2¢ for the laborers, effective Jan. 1st. This is an increase of 12 1/2 cents for the first two trades and 5 cents for the laborers.

An agreement was recently signed between the Cleveland local of the International Union of Wood, Wire and Metal Lathers and the Lathing Contractors' Association, which will give the members of this craft the same rate of wages for the next two years as that recently agreed upon by the plasterers. For the first year of the two-year agreement, lathers will receive \$12.50 per day or \$1.56 1/4 per hour, while for the second year, they will get \$13.00 a day or \$1.62 1/2 per hour. The agreement is effective March 1, 1925, and runs until March 1, 1927. The lathers waived their former demand for the five-day week as did the plasterers, and under the agreement just signed will work forty-four hours per week.

The Building Trades Employers Association of Cleveland announces that an agreement between the Iron Contractors Association and Local No. 17 of the International Association of Bridge, Structural and Ornamental Iron Workers has been signed, effective March 1, 1925, which will run until March 1, 1926. The rate is \$1.50 which is the same as that paid last year. This trade has worked without an agreement for two years.

Building News Section

APARTMENTS

Sub-Contracts Awarded.
APARTMENTS Cost, \$300,000
OAKLAND, Alameda Co., Cal. Facing
 Lake Merritt, between Alice and
 Jackson Sts.
 Twelve-story Class A "Community"
 apartment building (20 apts., 7
 rooms each).
 Owner—Lake Drive Corporation.
 Architect—Maury I. Diggs, 19th and
 Telegraph Ave., Oakland.
Plastering—T. D. Sexton, 351 12th St.,
 Oakland.
Title—Rigney Title Co., 260 Walsworth
 Ave., Oakland.
Ornamental Iron—Michel & Pfeffer,
 10th and Harrison Sts., S.F.
Elevators—(2 passenger and 2 ser-
 vice), General Elevator Co., 1161
 Howard St., San Francisco.
 Figures are being taken on other
 portions of the work.

To Be Done By Day's Work.
APARTMENTS Cost, \$25,000
SAN FRANCISCO, SW Francisco and
 Gough Streets.
 Three-story and basement frame (12)
 apartments.
 Owner—J. Garelli.
 Architect—P. F. DeMartini, 946 Broad-
 way, San Francisco.

Contract Awarded.
APARTMENTS Cost, \$24,000
OAKLAND, Alameda Co., Cal. W Broad-
 man, 476 N College.
 Two-story 20-room apartments.
 Owner—A. Rosenkranz, La Vista Apts.,
 Oakland.
 Architect—None.
 Contractor—W. A. Knowles, 414 15th
 St., Oakland.

To Be Done By Day's Work.
SHOP Cost, \$10,000
SACRAMENTO, 3rd and O Sts.
 Two-story frame and galvanized iron
 shop with apts. above, (containing
 4 apts., 10 rooms and one store).
 Owner—A. Alderman, 919 8th St., Sacra-
 mento.
 Architect—Frederick S. Harrison, Peo-
 ples Bank Bldg., Sacramento.

To Be Done By Day's Work.
APARTMENTS Cost, \$25,000
SAN FRANCISCO, NW cor. Clay and
 Reed Sts.
 Three-story and basement frame (12)
 apartments.
 Owner—Herman Hogrefe, 273 Funston
 Ave., S. F.
 Architect—Edward E. Young, 2002
 California St.

Contractor Taking Sub-Figures.
APT. HOUSE Cost, \$75,000
BERKELEY, Alameda Co., Cal., 2419
 Durant Ave.

Three-story frame and brick veneer
 apartment house.
 Owner—Dr. J. A. Stamer & A. Makower
 Architect—J. C. Sisson & H. A. Schary,
 214 Grand Ave., Oakland.
 Contractor—S. M. Shapero, 1105 Addi-
 son St., Berkeley.

To Be Done By Day's Work.
APARTMENTS Cost, \$12,000
SAN FRANCISCO, E. 16th Ave., 90 S.
 California St.
 Three-story and basement frame (5)
 apartments.
 Owner—Teresa Owen, 865 Clayton St.,
 S. F.
 Architect—Baumann & Jose, 251 Kear-
 ny St., S. F.

Contract Awarded.
APARTMENTS Cost, \$20,000
OAKLAND, 541 Sycamore St.
 Two-story brick 13-room apartments.
 Owner—John Conant, 542 25th St., Oak-
 land.
 Architect—None.
 Contractor—Grigsley Bros., 3911 Vale
 Ave., Oakland.

To Be Done By Day's Work.
APARTMENTS Cost, \$20,000
SAN FRANCISCO, S Hayes 143 E Brod-
 erick Street.
 Three-story and basement frame (12)
 apartments.
 Owner—E. J. Wade, care architect.
 Architect—Baumann & Jose, 251 Kear-
 ny St., San Francisco.

SEATTLE, Wash.—Albertson, Cornell
 & Walsh, 112 Massachusetts St., at ap-
 prox. \$250,000 awarded contract by F.
 M. Stanley to erect 4-story and base-
 ment, 108x120 ft., reinforced concrete
 apartments at n. w. Wall St. and 5th
 Ave.; will contain 62 two and three-
 room apts., Henry Bittman, architect,
 Securities Bldg., Seattle.

BONDS

STOCKTON, San Joaquin Co., Cal.—
 Until April 6, bids will be received by
 county supervisors for purchase of
 \$18,000 bond issue of Tracy School Dis-
 trict; proceeds of sale to finance school
 improvements.

REDWOOD CITY, San Mateo Co., Cal.—
 Until April 6, bids will be received by
 county supervisors for purchase of
 \$10,000 bond issue of Visitation School
 District; proceeds of sale to finance school
 improvements.

SAN MATEO, San Mateo Co., Cal.—
 Election will be called shortly in San
 Mateo Union High School District to
 vote bonds to finance purchase of San
 Francisco Motion Picture Studio plant.
 If issue carries, the structures will be
 remodeled for high school purposes.

REDWOOD CITY, San Mateo Co., Cal.—
 Until April 6, bids will be received
 by county supervisors for purchase of
 \$120,000 bond issue of South San Fran-
 cisco Elementary School District and
 \$54,000 issue of South S. F. High School
 District; proceeds of sale to finance
 school improvements.

SAN BERNARDINO, San Bernardino
 Co., Cal.—City has been offered site at
 2nd St. and Mt. Vernon Ave. by Santa
 Fe for branch fire station, offering being
 contingent on success of proposed \$60,-
 000 fire bond issue. Election date has
 not been set.

SAN DIEGO, San Diego Co., Cal. —
 Councilman Harry K. Weitzel has pro-
 posed bond election to provide funds
 for erection of joint city and county
 bldg. Improv. would cost the city \$500,-
 000.

COLUSA, Colusa Co., Cal.—Election
 will be held April 11 in Colusa Union
 High School District to vote bonds of
 \$200,000 to finance erection of new high
 school. Preliminary plans for struc-
 ture being prepared by Architects Geo.
 C. Sellon & Co., 1005 8th St., Sacra-
 mento. Trustees of district are: L. K.
 Jordan, H. Jacobson, W. L. Merrill and
 Roy Turner.

CHURCHES

Plans Being Prepared.
CHURCH Cost, \$40,000
BURLINGAME, San Mateo, Cal. Oak
 Grove Ave.
 Frame stucco and plaster church, ter-
 ra cotta tile roof, Spanish style,
 oil burning furnace heating sys-
 tem, 500 seating capacity.
 Owner—First Church of Christ, Scienti-
 ist.
 Architect—Walter C. Falch and W. A.
 Newman, associated, Hearst Bldg.,
 San Francisco.

DICKEY MASTER TILE

backs the face brick walls in the new P. G. & E. Building

DICKEY MASTER TILE is being used, faced with brick, covered with stucco, or exposed, for the bearing and non-bearing walls of many important buildings throughout Central California, including schools, hospitals, barracks, factories, mills, office buildings, apartment houses and hotels.

WHY? BECAUSE (1) it saves one-third to one-half the labor; (2) it saves one-half the mortar; (3) although amply strong it is 54% lighter than solid masonry and 60% lighter than concrete, and, (4) it usually eliminates the need of furring or other waterproofing.

NOTE:—On March 10th, Sandy Pratt spoke before the Rotary Club in Auburn and wrote up some of the Rotarians and other citizens of Auburn. The following two letters (last one in K.C.B.-like style) were received in reply.

J. C. MANNING
Anything in Wood—Made or Repaired

Auburn, Cal., March 23, 1925.

Clarence F. Pratt,
San Francisco.

Dear Sir:

Your K.C.B.-like story in the "Bee" of March 14th, should have had my attention several days ago, but I have been very busy on hardwood floors and very tired when night came. You see I do something besides repair old chairs. I lay the best floors in California. But first I want to apologize for that slip of the tongue. Really I did not intend to say your K.C.B. writings were foolishness. When a man can take sand and gravel for an advertising text, and make people read his message, when they are not interested in his product, he is not writing foolishness. They are not only reading, but believing. I saw a woman looking for sand for her bird the other day and she insisted on having Sandy Pratt's sand because it was good sand.

Your estimate of Bill Lee is about correct, but you do little Ellen a gross injustice, she is a bright child. It's all right to say Ed Robie built a wooden Ford, but no one in Auburn is going to believe it. Taken as a whole, I say you did well considering the gang you had to write about.

Hoping to meet you again when you have time to talk about sand or anything else.

"I thank you."
J. C. MANNING.

SANDY PRATT.

YOU MAKE me sore.

BECAUSE THE number of.

MY BANKS is four.

THEY ARE not so full.

OF ROCK and sand.

AS ARE your banks.

ALL OVER the land.

BUT THEY are all.

CHUCK FULL of Kale.

WHICH THE customers.

HAUL IN by the bale.

IF YOU would save.

YOUR SAND and rocks.

PERHAPS YOU would.

ACCUMULATE SOME tobacco.

IN YOUR old tobacco box.

AND THE Sacramento Bee.

WOULDN'T BE so full.

OF YOUR style.

OF SANDY "Bull."

ADVERTISING PAYS.

ABOUT THAT there is no doubt.

EVEN IF we don't know.

WHAT IT'S all about.

BUT WHEN President BILL.

SAW THE result.

OF YOUR wits.

HE SOAKED every.

BLOOMIN' ONE of us.

THE SUM of four bits.

IN THE future when.

YOU, OF the Auburn.

ROTARY CLUB, tire.

SEND US a night letter.

COLLECT BY wire.

(SIGNED) GUY "Banker" Brundage.

TO

SANDY PRATT of

PRATT'S CONCRETE "Micks."

MARCH 17TH, 1925.

Sandy Pratt, president of the Pratt Building Material Co., producer of sand, rock and gravel will be in Auburn to give a check to the club on April 15th. If Ed Robie's dog or Bill Lee's meat hound does not interfere.

Sub-Figures Being Taken.

HOSPITAL. Cost, \$—
SALINAS. Monterey Co., Cor. Monterey and East San Luis Streets.
 One-story reinforced concrete 30-room hospital.
 Owner—Mrs. Rollin and Wiley Reeves, Salinas Valley Hospital.

Official Proposals

NOTICE TO CONTRACTORS

(Garage—St. George, Calif.)

SEALED PROPOSALS, indorsed "Proposals for Garage at Radio Compass Station, Point Saint George, California, Specification No. 5038," will be received at the Public Works Office, Navy Yard, Mare Island, California, until 11 o'clock A. M., April 15, 1925, and then and there publicly opened, for a garage at Radio Compass Station, Point Saint George, California. The building will have a concrete foundation, concrete floor, wood frame, wood siding, wood shingle roofing, sliding doors and casement sash. Specification No. 5038 and accompanying drawings may be obtained on application to the Bureau or to the Commandant, Navy Yard, Mare Island, California. Deposit of a check or postal money order for \$10.00, payable to the Chief of the Bureau of Yards and Docks, is required as security for the safe return of the drawings and specification. L. E. GREGORY, Chief of Bureau, October 23, 1924.

BIDS WANTED FOR HIGHWAY IMPROVEMENT

NOTICE TO CONTRACTORS

(Elko County—Nevada State)

Sealed proposals will be received by the undersigned until 1:30 P. M., on April 8, 1925, for constructing a portion of the State Highway System in Elko County, from four (4) miles east of Silver Zone to Nevada-Utah State Line, work consisting of grading, construction of culverts and placing a gravel surface, length 16.86 miles.

Plans may be examined and form of proposal, contract and specifications secured in the office of the undersigned; may be examined also in the division office at Elko, Reno and Las Vegas and the district office of the Bureau of Public Roads, Bay Building, San Francisco; also in the county clerk's office at Elko. For each copy of plans undersigned requires deposit of fifteen dollars (\$15.00), which will be refunded upon return of plans in good condition within 30 days after opening of bids. Bids must be on proposal form of Highway Department and may be accompanied by a certified check in the amount of 5 per cent of bid.

Each bidder must accompany his bid with certificate from a surety company, duly authorized to do business in Nevada, stating that such surety company will provide said bidder with a bond in such sum as is required in and in accordance with the provisions of said specifications, conditioned for faithful performance of the contract and specifications.

Right is reserved to reject any or all bids.

GEO. W. BORDEN,
State Highway Engineer,
 Carson City, Nevada.

NOTICE TO CONTRACTORS

Mare Island Paving—Bur. Yds. & Docks

Sealed Proposals, indorsed "Proposals for Asphalt Paving, Mare Island, Calif., Specification No. 5092," will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., shortly and then and there publicly opened, for asphalt wearing surface on causeway connecting Mare Island with Vallejo. Specification No. 5092 and accompanying drawing may be obtained on application to the Bureau or to the Commandant, Navy Yard, Mare Island, Calif. Deposit of a check or postal money order for \$10, payable to the Chief of the Bureau of Yards and Docks, is required as security for the safe return of the drawing and specification. L. E. GREGORY, Chief of Bureau, March 3, 1925.

A call for bids published in this section indicates that bids are desired from other than local bidders. Maximum competition is desired, and this is assured through BUILDING AND ENGINEERING NEWS which reaches every worth-while contractor and materialman in Central and Northern California who bids on public work.

Rate: 10 cents per line, per insertion.

All official calls for bids of the California State Highway Commission, and Nevada State Highway Commission are published in this section.

NOTICE TO CONTRACTORS

(Paving—State Board of Harbor Commissioners)

Office of the Board of State Harbor Commissioners, Union Depot and Ferry House, San Francisco, California, May 31, 1925.

Sealed proposals or bids will be received at this office at or prior to 2 o'clock p. m., Thursday, April 2, 1925, for furnishing materials and labor for paving the Embarcadero from Howard St. to Washington St., on the waterfront of the City and County of San Francisco, in accordance with plans and specifications adopted by the Board Mar. 19, 1925, and on file in this office, to which special reference is hereby made.

The work is to be done under these specifications consists in furnishing all materials (except Portland cement, which will be furnished to the Contractor by the Board) and labor for the work of paving the Embarcadero from Howard St. to Washington St., on the waterfront of the City and County of San Francisco.

The materials to be used in this work shall consist of the requisite quantities of Portland cement (which will be furnished to the Contractor by the Board) aggregate for concrete, aggregate for bituminous mixture, asphaltic cement, iron castings and vitrified pipe.

The approximate quantities of work to be done under this contract are: 133,000 sq. ft. 2-inch Topeka wearing surface; or 133,000 sq. ft. 2-inch "Willite" wearing surface, 111,000 sq. ft. concrete base or 111,000 sq. ft. bituminous base, 12,000 sq. ft. base at Bel-Rik track, 18,000 sq. ft. basalt block pavement to be relaid, 750 sq. ft. concrete sidewalk, 750 lin. ft. concrete curb to be constructed, 1200 lin. ft. granite curb to be reset, 14 catch basins to be constructed and 600 lin. ft. 10-inch drain pipe to be furnished and laid.

No bid will be received unless it is made on a blank form furnished from this office and is accompanied by a certified check for an amount equal to five (5) per cent of the amount of the proposal, to be made payable to the Secretary of the Board, conditioned that if the proposal is accepted and the contract awarded, and if the bidder

shall fail or neglect to execute a contract and give the bond required with-in six (6) days after the award is made, in that case the said sum mentioned in said check shall be deemed liquidated damages for such failure and neglect, and shall be paid into the San Francisco Harbor Improvement Fund. Bids will not be considered by the Board unless delivered to the Secretary or to the Assistant Secretary, at the office of the Secretary, Room No. 17, Union Depot and Ferry House at or prior to 2 o'clock p. m., on Thursday, Apr. 2, 1925, at which time and place the bids will be publicly opened.

The Board reserves the right to reject any or all bids if deemed for the best interests of the State.

Plans and specifications for this work to be had at Room 18, Union Depot and Ferry House, upon depositing \$10.00 for same, which will be returned on return of plans and specifications.

Bidders are requested to mark envelope containing bid: "Bid for Paving the Embarcadero from Howard St. to Washington St."

CHAS. H. SPEAR,
M. F. COCHRANE,
JOHN S. SANFORD,
Board of State Harbor Commissioners.
FRANK P. WHITE,
Chief Engineer.
J. L. PHELPS, Secretary.

STATE OF CALIFORNIA

CALIFORNIA HIGHWAY COMMISSION

NOTICE TO CONTRACTORS

SEALED PROPOSALS will be received at the office of the California Highway Commission, 515 Forum Building, Sacramento, Cal., until 2 o'clock p. m., on April 20, 1925, at which time they will be publicly opened and read, for construction, in accordance with the specifications therefor, to which special reference is made, of portions of State Highway as follows:

Porto Costa County between San Pablo Creek and El Cervo (IV-C.C.-14-A) & D., about six and six-tenths (6.6) miles in length, to be widened with an asphalt macadam pavement.

Orange County between San Juan Creek and Gallivan (VII-Or.-2-A), about five and six-tenths (5.6) miles in length, to be paved with Portland cement concrete.

San Diego County, a bridge 30 feet wide across San Onofre Creek, near San Onofre (VII-S.D.-2-D) consisting of six 30 ft of reinforced concrete girder spans on concrete piers with paving of 8100 sq. ft.

Los Angeles County, (VII-L.A.-4-A), 1.4 mile and painting four steel bridges viz:

Bridge over the south fork of the Santa Clara River about 1/4 mile north of Saugus consisting of four 60 foot plate girder spans.

Bridge over the Santa Clara River about 5 1/2 miles north of Saugus consisting of one 200 foot truss and two 35 foot plate girder spans.

Bridge over San Francisco Creek about 6 1/2 miles north of Saugus consisting of three 60 foot plate girder spans.

Bridge over Castale Creek about 8 miles north of Saugus consisting of three 30 foot plate girder spans.

Plans may be seen, and forms of proposal, bonds, contract and specifications may be obtained at the said office and they may be seen at the offices of the Division Engineers at Los Angeles and San Francisco, and at the office of the Division Engineer of the Division in which the work is situated. The Division Engineer's offices are located at Willits, Redding, Sacramento, San Francisco, San Luis Obispo,

We offer you some very valuable data regarding the use of Hydrated Lime

IT has been demonstrated in much fine plastering that Sierra Hydrated Lime, manufactured under the air separation process, cannot "pop" to the injury of delicately tinted plaster, because Sierra Hydrated Lime will pass through a screen 200 mesh fine. It is

manufactured under chemical control, with a special mixing process that has been positively proven correct in every detail. Naturally this important hydrating process cannot be left to inexperienced men. Good plastering and resultant satisfaction, with enduring, surfaces are assured.

Specifications for all coats of interior plastering calling for hydrated lime exclusively may be had on application. Our representatives, and our experience and facilities are at your service.

SIERRA Hydrated Lime is More Plastic than Quick Lime for Mortar and Finishing Putty

Our representatives will be glad to prove this statement and demonstrate the scientific reasons why the architects who have specified Hydrated lime will never go back to slaked lime.
